ON OUR SEVENTH BIRTHDAY

In entering the seventh year of our career, we are, more vividly than ever, conscious of the immense responsibility which the high purpose of our mission, the nature of our task, the special conditions of India and the peculiar events of recent years have come to impose on us.

We realise, with a measure of pride but with a deal more of trepidation, that the very esteem, which it has been our privilege to enjoy amongst the varied sections of thought in India, has intensified the ardour and delicacy of our work and has made it necessary that we combine circumspection with alertness, good judgment with correct insight, regard for the other points of view with an insistence on the Indian point of view.

The bias and prejudice, which reigns supreme in times of political stress and excitement, has unfortunately spread to matters economic, with the result that while politics as such has never been our province, it has been none too easy to evolve such a policy in economics as would be fair and considerate to all the seemingly opposing interests making up the world of Indian finance.

We have had, oftentimes, to skate on thin ice. But, however, delicate or difficult the prospect, we have never faltered in our determination nor drawn back from our responsibility.

It has ever been our aim—and it will ever continue to be our aim—to play some useful part in the creation of a healthy, wholesome, and correct public opinion in financial matters. True to this aim, we have scrupulously avoided giving needless offence to any one person or interest; at the same time, we have never gone out of our way to placate any one person or interest.

Our position is, therefore, this: We are identified with no special or sectional interest. We have none to fear, none to pamper. Ours has been a comprehensive outlook; a unifying influence, and emphasis on fundamentals; an unremitting effort to study each question from all sides, to give full value to the force and logic of the arguments of the other side, to concede the *bonafides* of everyone who may not happen to see eye to eye with us, and to urge that one's problems are appreciated in terms of fundamentals, occasions for differences of opinion are reduced to a minimum; and that there can, at any rate, be no cause whatsoever for misunderstanding.

To outline a policy of this nature in these troublous times may appear puerile and futile; and not a few would think that executing such a policy is outside the realm of practical politics.

That we are reasonably correct in our policy and tolerably successful in the way in which we have given effect to it is amply borne out by the fifty and odd messages which we have received from readers of varied schools of thought and the genuine and kindly terms of each one of which have touched us. Government spokesmen have acknowledged the helpfulness of our suggestions and their constructive character. European businessmen have given us credit for an impartial outlook and a fair and just appraisement of principles and happenings. The leaders of the Indian business community have paid a generous tribute to the aptness, efficiency and utility of the service rendered by us. Indian public men have realised the contribution which *Indian Finance* has made to India's national interests in finance and economy.

Allround appreciation of this character evokes in us, to use a time-worn phrase, mixed feelings. We are deeply touched by the universal recognition of the worth and value of our service. We are, at the same time, not without diffidence whether we can, in the face of the complex and complicated problems that lie ahead of us, prove so equal to our task and our responsibility as to contnue to enjoy the esteem of the diverse intrests.

In fact, no journalist who understands his responsibility, can be wholly free from diffidence because, all the time, he has to worry lest what he writes should not be worth while for his hundreds of readers to peruse and ponder over. It is a great compliment that the readers pay you when they spare the time and trouble to read what you write; and you have to prove deserving of this compliment.

Moreover, financial journalism has, as its main technique, the gathering of real facts and figures in an easily assimilated form and the presentation of dry, accurate facts in a readable style.

In the discharge of a task requiring a special sense of responsibility, all that we can claim for ourselves is that we have spared no pains to make our service as apt and complete as possible.

On our last birthday, we wrote as follows regarding the need for continued growth and constant development if a financial journal is to be abreast of the times:

> "In these five years, we have noticed, and no one could help noticing, that politics, as such, is receding into the back-ground ; and the picture is being monopolised by finance and economics. And we cannot but feel that it looks as though, by a wisely-planned ordination, *Indian Finance* came to birth at the right moment, to undertake a task that was new but must needs be done, and to fulfil a mission, for which there was urgent, imperative and national need.
>
> Even as the subjects, to which *Indian Finance* is devoted, are engaging wider attention and calling for deeper study, this journal has had to be growing, expanding and developing all the time. This time last year, the weekly issue contained 36 pages ; the current numbers are 52 pages. It is, likewise, noteworthy that, in its fifth year, no less than half a dozen midweek supplements had to be issued, no week-off could be had for Christmas and New Year ; and a stupendous publication like the *Indian Finance Year Book* saw the light of day. To celebrate the sixth birthday, we are presenting to our readers this *Commercial Supplement* which will, hereafter, be an annual feature, and the aim of which would be to afford a descriptive record of the calendar year, while the *Year Book* will be mainly a statistical and comparative record of the fiscal year."

The events of 1933 have further underlined and emphasised the place of economics and finance in world affairs. This time last year, the weekly issue of *Indian Finance* contained 52 pages. The current numbers are 64 to 76 pages. In the fifth year, we issued half a dozen midweek supplements; in the sixth year, there were over 20 midweek supplements, including four on New Loans, one on Budget, one on Reserve Bank and twelve Industries Supplements now stabilised as a monthly feature.

We have on hand proposals for further expansion. We are, at the moment, examining the possibilities of a Hindi edition. As the purpose of *Indian Finance* has been to educate the public in India in financial matters, this mission cannot be said to be adequately fulfilled till the large mass of such Indian businessmen as are able to read and write only in Hindi are served by a financial journal brought out in a language which they could understand.

The monthly trade review has been revived; and we look forward to considerable amplification and improvement of the features in this review.

Railway finance is another project in view. We hope to get a definite move on as soon as we have got through the larger part of the work of the *Year Book* for the current year.

Efforts are being made to expand the weekly reviews of the commodities markets by arranging for special messages from a good few of the important up-country centres.

Company reports which are now a routine feature will be dealt with in a more detailed way.

For these and other improvements, in the carrying out of which we, as hitherto, shall not count the cost, the impetus and inspiration shall be the genuine and sincere appreciation of our readers between whom and ourselves there has come to be something like a personal link.

To all our readers and to every one who has supported us and cheered us in our onward march, we tender a full measure of our gratitude. Again, thank you most sincerely.

P. R. Srinivas,
Editor,

C. S. Rangaswami,
Managing Editor.

GREETINGS FROM ALL QUARTERS

UNASSAILABLE STANDING

Sir Osborne A. Smith, Managing Governor, Imperial Bank of India:

I congratulate *Indian Finance* on its 7 years of remarkable progress and its unassailable standing in financial circles both here and in other centres.

I find it newsy, up-to-date and reliable, its predictions and viewpoints are, in the main, sane and sound, while as a dissector of local and world's monetary events and conditions, and of budgetary happenings, it is pithy and first class.

The statistical information supplied is valuable for reference, and altogether the paper is more than a creditable example of Indian brains and enterprise.

EXTRAORDINARY ENERGY AND ABILITY

Sir Kenneth MacDonald, Managing Governor, Imperial Bank of India:

Your child will be six on the 28th of this month ; so I write to wish it and yourself many happy and prosperous returns of the day.

The extraordinary energy and ability with which *Indian Finance* is conducted has placed it in a unique position in India, and I hope that the independence which has characterised it in the past will be continued.

UNBIASED, SCIENTIFIC OUTLOOK

Mr. Nalini Ranjan Sarker, President, Federation of Indian Chambers of Commerce and Industry:

I send to *Indian Finance* my heartiest congratulations and good wishes on its completion of its sixth year.

The journal has attained a position and earned a reputation for itself which easily place it in the first rank among journals of its kind.

Messrs. Rangaswami and Srinivasan, Managing Editor and Editor respectively of the paper, have, with untiring zeal and supreme effort, by powerful and courageous writing, and by the ever-wakeful regard to maintain an unbiassed, scientific outlook on even the most controversial problems, built up a unique reputation for their paper and deserve the warmest congratulations. It is a great achievement, indeed, considering that the journal was started but six years ago.

The importance of a journal of this kind in our country can hardly be exaggerated. Our public has but the haziest ideas about happenings in the world of finance. They are, often times, ill-informed or not informed at all on most financial problems of great weight and urgency. A journal, like *Indian Finance*, which attempts to inculcate right thinking and right opinion on such problems, is, therefore, at once doing a great service to the people and setting a very salutary example to others in the field of financial journalism.

I wish *Indian Finance* years of increasing prosperity and service to the public.

MOST USEFUL AND INFORMATIVE

The Hon. Mr. J. S. Henderson, President, Associated Chambers of Commerce:

I have much pleasure in acceding to your request for a message from me for publication in the Commercial Supplement of *Indian Finance* on the occasion of its seventh birthday on 28th January, 1934.

It must, indeed, be a source of great satisfaction to you to reflect that *Indian Finance* has now, at this early stage of its career, so firmly established itself as a most useful and informative weekly journal on financial matters.

FRESH AND INDEPENDENT VIEWS

Dr. J. Matthai, President, Tariff Board:

I write to wish *Indian Finance* continued success and prosperity. I have been a close and diligent reader of *Indian Finance* ever since it was started and have always admired the freshness and independence of its views on economic questions.

Personally I have derived the utmost assistance from its criticisms on matters in which I am directly interested and from the valuable materials which it provides from week to week on questions of trade and finance.

With every good wish.

GROWING PUBLIC USEFULNESS

Prof. V. G. Kale, Professor of Economics, Ferguson College, Poona:

I must heartily congratulate *Indian Finance* on its having completed six year of its useful and progressive career. I find from personal experience that the circle of its readers is steadily widening and that the varied information contained in it and the comments of the Editor on current events and developments are highly appreciated.

The importance of an intelligent understanding of facts and tendencies in the domain of industry, commerce and finance in this country, as elsewhere, cannot be over-emphasised; and *Indian Finance* meets a badly felt want in this respect.

I wish the journal a long life of growing public usefulness and would like all those who are connected with trade and industry and are interested in the economic progress of India, including our universities and colleges, to utilise the services afforded to them by the journal.

STRENGTH TO STRENGTH

The Hon. Sir Shanmukham Chetty, President, Legislative Assembly:

I am glad to know that *Indian Finance* will be entering its seventh year of existence on the 28th January, 1934.

The journal is growing from strength to strength and is maintaining the reputation that it has earned for sober and accurate judgment on financial matters.

Indian Finance has been mainly responsible for rousing a keen interest in the study of finance amongst Members of the Legislative Assembly and the outside public. I know that a great many public men turn to the pages of your journal for reliable information on financial matters.

You have been doing a real public service through this venture and I hope you would maintain the same standard of efficiency.

I wish you and your journal all success.

IMMENSE USEFULNESS AND IMPORTANCE

The Hon. Sir Maneckji B. Dadabhoy, President, Council of State:

It is a matter of great satisfaction that *Indian Finance* will be entering its seventh year on January 28.

Indian Finance has already proved its immense usefulness and importance by dealing with important financial questions and inviting contributions from experts in financial matters.

I hope you will be spared long to be at the helm of this valuable journal as its success is mainly due to your unbounded energy, your method of clearly dealing with most complicated and difficult financial problems and your unabated industry

I wish *Indian Finance* all possible success in future.

DILIGENT READER FROM THE VERY FIRST

Mr. P. R. Rau, Financial Commissioner of Railways:

As a diligent reader of your *Indian Finance* from the very first and one who has derived much instruction from it, I should like to congratulate you on its Seventh birthday and to wish it a long and useful life.

I am looking forward eagerly to your projected Railway Supplement which, I am sure, will be as valuable and interestin as the other Supplements which you have already brought out.

STANDARD TEXT-BOOK

Mr. E. J. Bunbury, former President of the Bombay Local Board, Imperial Bank of India:

Never before was the necessity for study of finance greater than it is to-day. *Indian Finance* may well be taken as the standard text-book by those who aspire to knowledge of India's current financial affairs.

GREAT AND PATRIOTIC SERVICE

Mr. S. Satyamurti, the well-known Nationalist of South India:

I am delighted to learn that *Indian Finance* will be entering its seventh year on the 28th of January.

I offer you my very hearty and sincere felicitations on the same.

Indian Finance has been doing a great deal to educate men like me on the problems of Indian finance. The subject is somewhat abstruse and vested interests are many. We, who have only a single desire to do the best by our country, are often confused by a Babel of voices. We have learnt to look to *Indian Finance* with the confidence that its advice is always disinterested.

In the spacious days to come when there will be an Indian Finance Member though with truncated powers, there will be ample scope for the great and patriotic service which *Indian Finance* is doing and can do.

I wish all strength to your elbow, that *Indian Finance* may become in India what the *Financial Times* is in Great Britain.

VERY USEFUL

Sir Purshotamdas Thakurdas, formerly President, Bombay Local Board, Imperial Bank of India:

Indian Finance has made its mark as a very useful paper dealing with commerce and finance. It enters its 7th year this month and I wish it to celebrate its 70th year with greater *eclat.*

Regarding the *Commercial Supplement* which was issued a year back by you, one can only wish it many returns of the happy day.

IT HAS MADE HISTORY

Mr. G. D. Birla, formerly President of the Federation of Indian Chambers of Commerce and Industry:

Indian Finance has made history in the economic world of India.

It has helped the laymen in understanding the intricate problems pertaining to high finance, and has helped, at the same time, experts in moulding their thoughts.

It deserves encouragement, therefore, from all those who take interest in Indian economics.

I wish the *Indian Finance* all success.

With the best wishes.

ALWAYS IN THE FOREFRONT

Mr. Kedarnath Khandelwal, President, Calcutta Stock Exchange:

Indian Finance has completed six years of its most useful existence and enters, on January 28th, 1934, its seventh year.

From babyhood it has grown into manhood, if not in years, at least in its usefulness and public service. It has fully justified its existence by its services rendered during the last four years which have been the most trying for the business community, when businessmen were confronted with economic questions of world-wide importance, and happenings on the other side of the hemisphere had their repercussions on business activities at home.

On various occasions, clear and lucid expositions of economic events were necessary; and *Indian Finance* has never lagged behind on such occasions; rather has it always been in the forefront with its Mid-week Supplements, Commercial Supplements and specially its Year Book which has removed a long-felt want and has come to occupy a place in Indian finance which nobody but *Indian Finance* can so well fill.

It has helped to create an interest in financial questions and made them interesting and attractive to ordinary readers.

I wish a long life of public usefulness to *Indian Finance* so that it may continue to render its service to all those who have Indian economy at heart.

DOUGHTY CHAMPION

Lala Shri Ram, formerly President of the Federation of Indian Chambers of Commerce and Industry:

Indian Finance is not a mere financial newspaper! It is a national organ, having, as its object, the economic uplift of the country, ever keenly watchful of its needs, solicitous in its interests, doughty in the championship of its cause.

It is an educative influence bringing light and guidance to a public uninitiated in the intricacies of financial problems.

In an age when the "body politic" tends to assume a deeper economic complexion, the value of a journal like *Indian Finance* is inestimable.

Although I have not always agreed with its views, the country is, in no small measure, indebted to it for its sound advice and well-informed criticism in all matters of public finance. Take, for instance, its timely hints on, and its support to, loan flotations which have enabled the country to save in interest charges, or its fight on the ratio question during the discussions on the Reserve Bank Bill.

If, in the latter instance, its pleading has not borne fruit, it is not because *Indian Finance* did not contribute to a precise appraisement of the issues involved but rather because the legislature has been powerless or perverse.

On the commencement of the seventh year of its issue, I am glad to be able to pay a tribute to the talented ability with which the journal has been conducted and I wish it a long career of usefulness and service to the country.

CONTINUED GROWTH

(By Wire)

The Hon'ble Sir George Schuster, Finance Member, Government of India:

On its seventh anniversary I wish *Indian Finance* many happy returns of the day with continued growth and success.

GROWTH IN CIRCULATION AND PRESTIGE

Sir Cowasjee Jehangir (Junior), Deputy Leader, the Independent Party, and formerly Acting Leader, the Opposition in the Assembly:

Since *Indian Finance* is entering on its seventh year of existence, I would like to send it a message of congratulation. This country needs such papers not only for the education of our people but also as a watchdog over Government's financial policy.

Indian Finance has grown in circulation and prestige. May it continue to do so in the future to educate public opinion in the real and best interests of our country.

Sir P. S. Sivaswamy Aiyar, formerly Member of the Madras Executive Council:

With reference to your letter of the 10th inst., informing me that *Indian Finance* will be entering on its 7th year of existence on the 28th of January, I have great pleasure in complying with your request for a message for your anniversary number.

I have been looking into the issues of your journal now and then and I have been greatly struck with the remarkable ability, knowledge and information with which the journal has been conducted. The clearness of exposition, trenchancy of style and the confidence, generally well-founded, of its views, which are conspicuous features of your journal, make attractive reading.

Finance is a subject which, notwithstanding its importance, is shunned by most people as too technical and intricate. A journal, which aims at educating the citizen as well as the business world and contributing to the formation of sound public opinion on financial policy and movements of commerce and trade, has an important *role* to play in the life of the country.

Your journal may well claim comparison with the best financial journals in other countries and I wish it an increasing measure of success and popularity.

With best wishes and regards.

EXTREMELY VALUABLE

Mr. W. Lammond, Deputy Governor, Imperial Bank of India:

I take this opportunity of congratulating you on the success of *Indian Finance* as it enters its seventh year. It has developed into an extremely valuable publication and is worthy of the wide circulation it enjoys.

INTERESTING AND INSTRUCTIVE

Mr. R. A. Gray, Secretary and Treasurer, Imperial Bank of India, Madras:

I am very pleased to learn that *Indian Finance* will be entering its seventh year on the 28th January. I have been a regular reader of the journal since it was first issued and have always found it extremely interesting and instructive. The journal has to be congratulated on the signal success it has achieved.

SO EASY TO READ

Mr. B. A. C. Neville, Secretary and Treasurer, Imperial Bank of India Calcutta:

I have great pleasure in offering you my sincere congratulations on the occasion of *Indian Finance* entering its seventh year of publication.

I have to read numerous financial publications but the feeling of distaste which invariably assails me when I see them piled on my office table is notably absent in the case of *Indian Finance*, because its views are expressed in a manner so vigorous and arresting and because it is so easy to read.

I have no doubt that *Indian Finance*—the outstanding financial journal of India—will continue to increase in popularity and influence under its present able management.

USEFUL WORK

Mr. J. G. Ridland, Secretary and Treasurer, Imperial Bank of India, Bombay:

I send you my best wishes on the 7th Anniversary of your paper, and trust that it will long continue its useful work.

CONFIDENT OF FUTURE

Sir Alan Parsons, Financial Secretary, Government of India:

I should very much like to be permitted to congratulate *Indian Finance* on its seventh birthday.

It is, in my opinion, most desirable that there should be in India responsible financial journals ventilating India's financial problems, applying to them courageous and independent criticism, and giving them the publicity that is essential for their proper understanding. This I know to have been, from its earliest days, the aim of *Indian Finance* and it is for this reason that I am confident that it will attain in the future an even higher position and make even a wider appeal than it does at present.

ARGUE WITH VIGOUR

The Hon. Mr. J. B. Taylor, Additional Secretary, Finance Department, Government of India:

I have great pleasure in acceding to your request to give you a message for publication in your Seventh Anniversary Number of *Indian Finance*.

It is obvious that the world has left, possibly for ever, the state of affairs in which monetary movements could be left to regulate themselves. Management and control are necessary, and this is a fact which is becoming increasingly recognised in India as well as elsewhere. Also, the creation of a Reserve Bank will vest this management and control in an Indian Directorate which must be affected by responsible Indian opinion to an extent which, even a few years ago, it would not have been possible to contemplate. In these circumstances, India needs a financial press which will represent and give a fair hearing to all the inevitably divergent points of view, because the subject can never escape being controversial.

Papers like yours will, therefore, perform an increasingly necessary function because, though you argue with vigour, you argue; you do not content yourself merely with asserting, and I trust that this public function will meet with even greater public appreciation in the future than in the past.

PRAISE FROM EUROPEANS AND INDIANS ALIKE

Mr. G. A. Natesan, Editor, the "Indian Review," and now Member, Tariff Board:

It is with great pleasure that I respond to your invitation to give a message to your valuable paper. I have been reading it with interest ever since the first issue appeared and I have been struck by the fearlessness and independence with which *Indian Finance* has been handling questions which vitally affect the interests of the country.

It must be a source of gratification to you that even high-placed officials who do not see eye to eye with you recognise the great ability shown by you in handling difficult and complicated problems of Indian finance and economics.

As a South Indian who has been staying in Calcutta for some months past, it has been a matter of great pride to me to listen to the highly complimentary manner in which the paper and its conductors, Mr. C.S. Rangaswami and Mr. P. R. Srinivas are referred to by Europeans and Indians alike.

Knowing as I do the difficulties of journalistic enterprise in this country, I admire the liveliness of its articles, the regularity of its appearance and its good get-up.

May it thrive and prosper!—is my devout wish.

QUALITY PREFERRED TO PROFIT

Mr. H. R. Batheja, Head of Economics Department, Patna University:

I congratulate heartily *Indian Finance* on reaching the seventh year of its existence. During all these years, it has progressed from strength to strength until it has become the most powerful organ of Indian financial opinion.

What has given me special satisfaction is the fact that this position has been obtained without sacrificing its fresh and independent outlook. Profit has never been preferred to quality and no year has passed without some new improvement.

I wish it many more years of prosperity and public service under the able guidance of its talented Editors.

SERVED COUNTRY WELL

Dr. L. C. Jain, Head of the Economics Department, the Punjab University:

I am very happy to see *Indian Finance* entering its seventh year on January 28 and I heartily wish it many happy returns of the day. It has served the country well for six years and I am sure it will serve it still better in the years to come.

But any message of mine will be incomplete if I did not express my sense of admiration for the devotion and ability with which you are running *Indian Finance*.

With warmest felicitations.

EVERYBODY SATISFIED

Raja Bahadur G. Krishnamachari, M.L.A.:

On the occasion of the completion of the sixth year of *Indian Finance* and the Commercial Supplement issued along with it, I have much pleasure in conveying to Mr. C. S. Rangaswami, its able Editor, my great appreciation of the excellent manner in which questions of finance, which are the most difficult to tackle, have been dealt with by him virtually to the satisfaction of everybody.

In such a vast subject as Indian finance, there are bound to be sharp differences of opinion and the fact that *Indian Finance* has been able to hold its own notwithstanding such differences of opinion and command the respect of all thinking people including those who disagree with its views, clearly indicates the well-informed and far-sighted judgment of the Editor on which I congratulate him.

I wish *Indian Finance* continued prosperity and success and I hope it would be able to help India in the solution of her knotty financial problems which are bound to become more and more insistent, especially during the early years of the Federation.

INDEPENDENCE AND IMPARTIALITY

Sir Leslie Hudson, Leader, European Group, Central Legislature:

I note *Indian Finance* will be entering on its seventh year of publication on 28th January and I wish you continued success and increasing circulation.

Your issues are always full of interest and I appreciate the independence and impartiality of your outlook and the clarity of your criticisms of current affairs affecting the commercial interests of India.

I am very strongly of the opinion, which I think *Indian Finance* shares, that the only way in which India's trade and commerce can be successfully carried on is by co-operation between the British and the Indians in the fullest possible sense.

FILLS LONGFELT WANT

Mr. G. Morgan, Member, Imperial Legislative Assembly:

I have very much pleasure in testifying to the great benefits conferred on the public by *Indian Finance.*

It fills a long-felt want and I have derived considerable knowledge from it. The last issue dated the 13th inst., contains many articles which should be carefully read by all members of the Assembly and those engaged in commerce.

I repeat that it is a most instructive and useful publication.

SERVICE TO COUNTRY

Dr. Ziauddin Ahmad, Member, Legislative Assembly:

Indian Finance has done great service to the country by educating the people, and supplying correct and useful information. The articles in *Indian Finance* have been frequently quoted in the Legislative Assembly debates.

YEOMAN SERVICE

Mr. Gaya Prasad Singh, Member, Legislative Assembly:

I am glad to learn that *Indian Finance* is now entering into the seventh year of its career.

During this period, it has been doing yeoman service to the cause which its name represents.

Its work has been specially invaluable in connection with the discussion on the Reserve Bank Bill in the Legislative Assembly; and I can only express my hope and also my confidence that it will continue, for long, to serve the interests of Indian finance, under the able Editorship of my esteemed friend, Mr. C. S. Rangaswami.

I heartily wish the paper a long career of useful activity.

JOLLY TEAM OF WRITERS

Mr. K. P. Thampan, Member, Imperial Legislative Assembly:

I wish to felicitate *Indian Finance* on entering the seventh year of its useful career.

Since I began to take it three years ago, *Indian Finance* has made considerable progress on all sides, adding one feature after another—Clive Street Gossip, Overseas' News by Air Mail, letters from Madras, Bombay and Olympus, and, I may add, a Portrait Gallery which I hope will be revived soon. 'Jnan', 'G. L. M.' 'Hillbird' and the whole jolly lot have so much endeared themselves to the reader that one sadly misses them if they do not appear in any issue.

To me *Indian Finance* has been of considerable help in my work in the Legislative Assembly. If I have been able to follow intelligently the debate on the Reserve Bank Bill (and that is all I claim to have done) I owe it to that paper.

Indian Finance is already the best paper in India on finance; and, with the co-operation of the public which it so richly deserves, it is sure to extend its usefulness in the coming days when economics is bound to play a very important part in the public life of this country.

I wish it every success.

FEARLESS AND BOLD

The Hon. Mr. B. K. Basu, Member, Council of State:

I feel greatly honoured by your invitation for a message for the Seventh Anniversary Number of *Indian Finance.* It affords me the greatest pleasure to record with admiration the fearless and bold opposition of *Indian Finance* to the Reserve Bank Bill. The cogent reasoning and the logical conclusions advanced by *Indian Finance* in its fight against the Bill earned for it, open criticisms from high authorities, but, undaunted by everything, you fought with your back to the wall till you lost.

There are some defeats which are more glorious than victories and I count this defeat of yours as one because the fight you put up was so valiant.

May your paper prosper and disseminate your ideas vigorously as it has so long done, without caring for frowns or favours!

EDUCATIVE VALUE

The Hon. Mr. S. C. Ghose Maulik, Member Council of State:

Let me wish *Indian Finance* on the Seventh Anniversary the best of circulation and influence.

I am one of the thousands of your readers, who have profited by the journal and it is gratitude, that gives me the first impulse to wish it well.

Its educative value can hardly be over-estimated. From the most unpromising materials, *Indian Finance* has created tolerable economists and passable financiers.

Godspeed to the journal.

HIGH STANDARD

Sir Naoroji B. Saklatvala, formerly President, Bombay Local Board, Imperial Bank of India:

In reply to your letter of the 10th instant I have pleasure in sending you my congratulations on the seventh anniversary of *Indian Finance* and my best wishes for its continued prosperity.

If it maintains, in the future, the present high standard of its general get-up, its informative value and independence of views, I am sure that it will continue to occupy a prominent position amongst Indian financial and business journals.

NONPAREIL

Mr. Amritlal Ojha, President, Indian Chamber of Commerce, Calcutta:

It is with real pleasure that I greet *Indian Finance* on its entering into its seventh year.

During the last six years, *Indian Finance* has conclusively proved to what great heights pure Indian financial journalism could rise. To-day this journal stands foremost amongst all its contemporaries—a position attained by sheer merit and merit alone.

Its services to the cause of the country and the manifold battles it has fought in the interest of Indian trade, commerce and industry are, indeed, too well known for me to dilate upon.

As an educator of the public opinion on matters of Banking and Currency, the journal stands *non-pareil.*

Only the other day Sir George Schuster referred to it, during the course of the Assembly discussion on the Ratio controversy, as the "well-known wholesale firm of Calcutta". My only request to its very able Editor is to keep the flag always flying and maintain his journal forever as a "wholesale firm", distributing the truth and nothing but the truth concerning finance, trade and industry.

PIONEER WORK

Sir Badridas Goenka, Vice-President, Bengal Local Board, Imperial Bank of India:

Indian Finance has come to occupy a unique position among the financial journals of the country.

It has the undisputed claim of having done the pioneer work in popularising study of financial subjects.

The articles have educative value and the notes and comments are interesting and always to the point.

What is most commendable in these days is that the journal is ever ready to champion the cause of the country. Its Supplements are timely and make interesting reading ; the one on Central Banking was particularly useful for a proper understanding of that complicated subject

I feel that *Indian Finance* is admirably fulfilling the mission it has undertaken and I sincerely wish it further success.

TOO WELL-KNOWN

Sir R. N. Mookerjee:

I am in receipt of your letter of 10th January requesting me to give you a message.

Indian Finance is too well known to need any commendation and my message comprises just my sincere congratulations to you on your achievement. I wish you many more prosperous years in the full hope that you will continue to guide *Indian Finance* along constructive lines.

FIRMLY ESTABLISHED

Mr. S. N. Pochkhanawalla, Managing Director, The Central Bank of India Ld:

I have great pleasure in congratulating *Indian Finance* on its entering the seventh year of its existence.

During this period the journal has established itself firmly in the domain of finance, and I wish it a career of still greater success and utility in the future.

SMILE ON FRIENDS: FROWN ON FOES

Mr. D. P. Khaitan, formerly President, Indian Chamber of Commerce, Calcutta:

I have great pleasure in conveying my best wishes on the birthday of *Indian Finance.*

Though only seven years of age, she has so well developed that she has the appearance and qualifications of seventeen. I have no doubt she will continue to smile on friends and frown on enemies. Her mother, poor India, sadly needs careful watching of her interests and nursing of her children.

"May *Indian Finance* be ever alert and active" is the sincere prayer of her well-wisher.

HIGH FINANCE AND HIGH FINESSE

Mr. A. Barrie Brown, Editor and Director, "Commerce", writes:

On the high road of finance you have done well. You have touched the dead corpse of Public Credit and you have taught it how to walk. In dealing with High Finance you have practised high finesse. You deserve well of your countrymen, thou Great Rangaswami.

SPECIALISING IN STATISTICS

Mr. Francis Low, Editor, "The Times of India":

In sending you a message for your Anniversary Number, one point which strikes me is the dearth of statistical information in India. The Government of India are now concerned with enlarging the amount of statistical information. In these circumstances a journal like *Indian Finance*, which specialises in disseminating commercial and financial statistics, is of great public utility.

ROMANCE OF HIGH FINANCE

Mr. Arthur Moore, Editor, the "Statesman":

I heartily congratulate *Indian Finance* and its Editor on entering its 7th year of publication.

We are told by scientists that a man becomes a completely different being every seven years, although both he and those who know him are unconscious of the fact that every particle of him has been changed. Newspapers can have much longer lives than human beings, and should be able to increase their vitality with each septennial period, and I trust that this will be the case with *Indian Finance*, which has already given such vigorous proof of vitality.

The personal touch seems to be a tradition in Indian financial and commercial journalism. The rolling eye of Mr. C. S. Rangaswami ranges over everything in heaven and on earth, from stars to atoms, and shows his readers every week all the romance of high finance.

Like many others, I find it most interesting reading.

RAPID PROGRESS

Mr. Desmond Young, Editor, "The Pioneer":

Indian Finance does not, I am sure, depend upon good wishes for its future success, for it is a well-produced paper, edited with great ability and fulfilling a useful purpose very efficiently.

But, as a newcomer to journalism in India who has found it of great interest and value, I hope that it will continue to make the rapid progress in standing and circulation that has marked its first seven years.

BRILLIANT AND CONSTRUCTIVE

Mr. S. A. Brelvi, Editor, the "Bombay Chronicle":

I am very glad to know that *Indian Finance* is entering in its seventh year. Allow me to congratulate you and those who are associated with it, not excluding G. L. M.

During the short period of its existence, it has made a permanent place for itself in Indian journalism of which it is an ornament. It has been doing no little service to the country by its informed exposition of current economic and financial problems and its brilliant and constructive comments on them.

Mr. J. N. Sahni, Editor,
"The National Call:"

On the seventh birthday of *Indian Finance*, every Indian will wish the great enterprise many happy returns of the auspicious day.

Indian Finance is by far the best financial journal of India, and is second to only a few even in the world. I have no doubt that under the able guidance of Mr. Srinivas, who is undoubtedly one of our foremost experts in public finance and other financial problems, *Indian Finance* will soon take the foremost place among the financial journals of the world.

It is difficult to realise, just at present, the full extent of the services rendered by *Indian Finance* to the country. But to its credit it must be said that it has all along been a sound adviser, a fearless critic, and an impartial judge; and even though, at times, one may have not seen eye to eye with it on public questions, there is hardly any student of public affairs who would not give it full credit for its sincerity of views and its undoubted patriotism.

I wish *Indian Finance* the life of the Everest!

Mr. S. Sadanand, Editor,
the "Free Press Journal:"

The rise of *Indian Finance* constitutes a romance in Indian financial journalism.

When the journal started seven years ago, it had, in spite of its name, no finance. Nor was there even a receptive market. Interest in intricate problems of finance was limited to an exceedingly small and select circle.

From out of this unpromising beginning to have created a clientele conferring affluence is no mean achievement. It is a measure of the meteoric career of *Indian Finance*. And it has synchronised, year by year, with a progressively widening public appreciation of the supreme importance of financial and economic studies for a correct understanding of national needs.

The influence of the journal is gauged by the extent to which it is looked up to. *Indian Finance* has built up for itself a unique position as the financial educative authority of the times. The brilliance of Mr. C. S. Rangaswami, Managing Editor, and the balance of judgment and intellectual ballast of Mr. P. R. Srinivas, Editor, have combined to make it as interesting to read as it is compelling as an authoritative exponent of opinion.

I wish *Indian Finance* many happy anniversaries, each serving as a landmark of progress from strength to strength.

Mr. Mathurdas Vissanji, President,
Indian Merchants Chamber, Bombay,
wires:

Hearty congratulations on *Indian Finance* entering its seventh year.

The baby has shown a splendid vitality and I hope that the child will be, in coming years, equally vigorous and develop into a powerful youth to the advantage of the country whom it has already served so well.

Professor T. K. Doraiswami Iyer,
Government College, Kumbakonam:

I have greatest pleasure in wishing God-speed to *Indian Finance*.

It is obvious that the aim of the journal is to render to the Indian public service of the kind that the *Economist* renders to the English public.

The resources in statistics and organised assistance available to a publication of this kind in India being what they are, it is very remarkable that *Indian Finance* has reached a high standard of excellence.

The Editor is to be congratulated on the watchfulness he displays in the matter of progressively improving the value of his publication. Its size, get-up, the significant groups under which the relevant figures are assembled and the comments made on financial events and developments are all features that add considerably to the attractiveness and usefulness of the publication.

Amidst the shifting sands of international finance, currency complications and trade wrangles, *Indian Finance* serves as a useful guide not only to businessmen and financiers but to also many persons in public life with whose intelligent understanding of economic questions is bound up the practical execution of schemes of economic amelioration.

I wish the journal a long and prosperous life of steadily increasing usefulness lit up by the addition of new features of interest which I dare say the ingenuity of the Editor will not fail to suggest.

Sir M. de P. Webb, the indefatigable and
penetrating student of public finance,
writes:

I see that *Indian Finance* is now entering its seventh year of successful publication. Allow me to send you my heartiest congratulations.

I have watched its growth with the keenest interest and satisfaction. Your well-informed reviews and penetrating analyses of the financial situation are always illuminating; and the mass of statistical facts that you present weekly to your readers, are of great value of all engaged in commerce.

Recent enlargements of *Indian Finance* include additional statistics and special articles dealing with financial matters in England and elsewhere and make your paper an authority of the first importance which no economist, businessman, investor, or banker can afford to be without. I always keep a file of *Indian Finance* at my side for ready reference.

May your efforts be rewarded with still greater success in 1934 and onwards!

MORE AND EVER MORE

Mr. C. C. Biswas, Member, Legislative Assembly:

In entering its seventh year, I am sure *Indian Finance* carries with it the blessings and good wishes of all.

I have been one of its most ardent admirers ever since its inception, and the admiration grows as the years roll on.

Indian Finance may be rightly regarded as a *vade mecum* to all who are interested in the economic development of the country.

Its wealth of satistical information, current and up to date, its lucid and impartial exposition of facts and figures, its fearless and just criticisms and comments on burning questions of the day, both at home and abroad, its penetrating analysis of forces and tendencies in the economic world, its special articles and special numbers dealing with diverse topics of interest and importance—have all combined to make *Indian Finance* not only a powerful organ of commercial opinion, but an authoritative exponent of sound economic thought.

May it continue to stimulate and inspire, more and ever more.

CLEAR AND FORCIBLE

Dr. P. J. Thomas, Professor, University of Madras:

I have regularly read *Indian Finance* since its inception, and it has kept me in touch with the changing phases of the Indian money market and the shifting currents of economic opinion in the country.

All may not agree with all the views expressed in its editorial columns but it will be generally conceded that its views have been stimulating and couched in clear and forcible language.

No less creditable is the publication of the *Indian Finance Year Book* and the many timely supplements which have focussed attention on important economic questions.

LUCID EXPOSITION

Mr. Jamal Mahomed, President, South Indian Chamber of Commerce, and formerly President of the Federation of Indian Chambers of Commerce and Industries:

It is with great pleasure that I congratulate the conductors of *Indian Finance* on its attainment of the seventh year of its very useful career.

This admirable organ has always been standing vigorously for the real economic and financial interests of the country and is noted for its able and lucid exposition and representation of those interests.

Indeed it occupies an indispensable place in the public life of the country and I heartily wish it all and increasing success and progress.

NATIONAL OUTLOOK COMBINED TO DETACHMENT

Mr. P. K. Chakrabarti, Editor, Advance:

A request from Mr. Rangaswami is nearly irresistible, and the request for a message for *Indian Finance*, which steps into another year of usefulness and service, is doubly so.

Most of its regular readers have pronounced upon the efficiency with which the journal is being conducted. For myself, I have always found it to be a willing helper whenever I have turned to its pages for information and suggestion.

As a critic of events, it is more than a passive recorder of facts and figures. What I personally have liked most about it is that it has succeeced in maintaining a national outlook without sacrificing the detachment necessary for a scientific treatment of economic questions.

WORLD PROMINENCE

Mr. H. G. Franks, Managing Editor, "Star of India:"

It is with exceptional pleasure that I express my warmest congratulations to *Indian Finance.*

Merely to complete six years of journalistic existence in these days is a great feat ; but to jump into world prominence at a leap is worthy of particular commendation.

Indian Finance is veritably a power in the world of those who control the Indian money market, and I look forward with both optimism and pride to the work which it can and will do in the future that lies ahead of this country.

May the pens of its twin editors continue to inspire, instruct and chide those of us who sit humbly at their feet.

TRIUMPHANT YET FERVENT

Mr. H. P. Bagaria, President, East India Jute Association:

Under modern business conditions, international factors play an important part in all markets and in the financial world. There is no other publication in this country which enables businessmen to understand the significance of important international economic events as *Indian Finance* does.

Indian Finance is doing pioneer work in creating an extensive interest in economic questions amongst the mercantile community in India—a service all the more notable in a country so primitive as India in regard to appreciation of public finance. As one connected with the paper from its very beginning, I have watched, with feelings of considerable pride, the rapid progress that it has been making and the triumphant and fervent way in which it is fulfilling its mission.

LIVE INSTITUTION.

Mr. Amal Home, Editor the *Calcutta Municipal Gazette*:

"Take from my lips the wish of happy years."

Your paper is more than a paper; you and your colleagues have made it within these few years a live institution. Only your perseverance, your courage and your skill have made this possible.

May *Indian Finance* grow from more to more and continue to lead Indian journalism in the field you have chosen for it.

A MESSAGE ON MESSAGES

By G. L. M.

I am asked to give a message to *Indian Finance* on its completing six years. I am thrilled by this invitation.

As political leaders when pressed by unlucky press reporters to give a message remark, "What message can I give?". The usual message to the nation on the tip-toe of expectation to receive it is, "Carry on!" Sometimes the last word "work" is inadvertently omitted—with disastrous results.

I knew a gentleman in Bombay who had a passion for sending messages. From the All-India Liberal Federation to the All-India Cow Conference, from the Hindu Sanatana Varnashrama Dharma Parishad to the Cutchee Dashashreemalee Caste (Orthodox Section) Conference, nothing escaped his attention. Nor did any Conference escape his message: it had only to be convened to receive his blessings on the opening day. Even Conferences held in the same city got his messages regretting his inability to attend and wishing it success—often by wire. This regret reminds one of "the pleasure" with which speakers moved and seconded resolutions of regret at the recent Town Hall meeting on the earthquake.

But to give a message to the newspaper public or a Conference audience who forget it as soon as they read or hear it is simplicity itself. To give a message to a financial journal on its annual birthday is a hard task. Especially for a layman like myself who has an instinctive awe of experts.

And, after all, what message can one give, In the first place, the seventh birthday of *Indian Finance* does not fall on a Saturday when men look forward to races no less than to financial tips from British Indian Street. Moreover, it is easier to give a message on a first or even a sixtieth birthday than on the seventh. At a first birthday, one can be patronising if rather diffident; at a sixtieth birthday, one can be reminiscent if slightly boring. But at a seventh anniversary, one can do neither: or, as a friend of mine used to say, you cannot take either of the one course.

To say after six years of solid—and even liquid—work that *Indian Finance* fills a long-felt want is somewhat like the Irishman who began to beat a jew because he had just then discovered that the Jews were responsible for the crucifixion of Christ. It is rather a stale compliment after the want has been filled pretty regularly not only every week but sometimes twice a week for six years. Satisticians guided by Bowley-Robertson are welcome to arrive at an approximately correct number of issues, including mid-week supplements. Rip Van Winkle was more up-to-date. On the other hand, to wish it a bright and prosperous future is not only superficial but superfluous. If one did not wish it, one would like to send it. Benevolence is the major premise of a message. Messages are the acme of responsive co-operation. The statements issued by the carpet knights of the Round Tables on their return to India are but perpetual messages to Hoare and Willingdon wishing many happy returns of such Conferences and Committees. Investigations, like anniversaries, must be annual.

On the whole, it is difficult therefore to know what message to give which is not stale, patronising or superfluous or all the three combined. One can only hope that the question of silver coinage and purchase as well as of the gold standard would be decided by the time the journal observes its silver and golden jubilees. Or else, only sterling and paper jubilees will have to be observed, which is not inappropriate for a paper of sterling merits. One can but wish that in years to come "Eavesdropper" will grow even more retrospective than ever and show how what he said in 1928 has been completely verified by events in 1978. One can but desire that "Jnan" besides writing excellent reviews of books will write profound books himself. One wishes that the series of Personal Portraits were not abruptly left off but concluded by a Pen Picture of the Portraiter himself by his numerous and humourous admirers. And lastly, one dares to hope that the admirable fight waged by the journal on the Reserve Bank Bill is the precursor of many a surdy battle which exponents of a national economic policy will have to wage against financial shackles and economic handicaps and commercial restrictions under the sham constitution to be imposed on this hapless land at the point of *the lathi*.

For if what *Indian Finance* wants is messages, what the financiers of India need to-day is message.

1933—IN RETROSPECT

SETBACK IN POLITICS AND RECOVERY IN TRADE

PROBLEMS STILL AWAIT SOLUTION

Judged by the events that make the flaring headlines of daily newspapers, 1933 is but another milestone in the dreary march of mankind since the autumn of 1929. By themselves they are far from being calculated to inspire hope. The political background was darkened by untoward events of various kinds. International goodwill was on the wane. Economic reprisals and retaliations were on the increase. The League of Nations suffered grievously in prestige; the peace pacts were discredited; and there was even a mild recrudescence of the old secret diplomacies, on which a peace-loving world should turn its back for ever, a faint rattling of swords in Europe, rendered inaudible by the loud swagger of incipient warlords. It is not to be expected that there would be evidence of more goodwill in the economic sphere. The World Economic Conference was a convincing failure; and all that has happened since, has only confirmed scepticism in the value of its ends and the efficacy of its methods. Even the one bright spot afforded by Mr. Roosevelt's bold experiments in America was besmirched by malevolent or ill-informed reports of failure.

In spite of all this, the fact remains that at the end of 1933 there was more hope in the human mind than at any earlier time in the depression. Doubtless, much of this feeling is to be attributed to the improvement in foreign trade and to the changed psychology of the U.S.A. consequent on the Recovery campaign. But there is an essential disagreement between the events of 1933 and the popular psychology at the end of it, which cannot be explained by mere statistics of production and trade.

Political History of 1933

It were well to dwell in some detail on the unwelcome political developments of the year under review. Considered as a whole, 1933 is notable for Japan's revolt against the League of Nations, culminating in formal notice of her intention to withdraw from the League, the breakdown of the Disarmament Conference, with Germany following in the wake of Japan and the increasing difficulties experienced in rehabilitating the machinery of international peace. The year opened ominously with the completion, within three days of the New Year, of the Japanese occupation of Shanhaikwan. The hostilities strengthened the prevalent sentiment against Japan; and by the middle of February the League came to a definite decision on the outstanding issues raised by the action of the Japanese Government in Manchuria. Anticipating the final decision of the League, the Council of Ministers in Japan had decided, a few days ahead, that Japan should withdraw from the League, if the report of the Committee of Nineteen were to be approved by the Assembly. There was, indeed, no means of bridging the differences between the League and the Far-Eastern Empire, especially as Japan made it clear by her occupation of Shanhaikwan and by her advance, by the middle of February, into Jehol that she was not to be deterred, by the pacifist declarations of the League, from consolidating her dominion in the lands lying adjacent to her. Though it was not till the end of March that Japan gave formal notice of withdrawal from the League, accompanied by an emphatic disclaimer of any Pan-Asiatic policy, the end of this depressing episode in recent international history was from the outset a foregone conclusion. The failure to check Japanese aggressiveness, it must be said, is not half so deplorable as the cynical disregard shown by the representatives of the great Powers for the ends which, as permanent members of the League of Nations, they should be expected to subserve.

Withdrawal from the League of Nations

And this same factor was naturally at work in the deliberations of the Disarmament Conference also. No one can make the mistake of believing that Germany had taken all possible care not to put herself in the wrong before making her fateful decision to withdraw from the Disarmament Conference and give formal notice of her intention to leave the League of Nations. The appointment of Herr Hitler on January 30 as Chancellor of the Reich, was the beginning of the growth of a serious mistrust and misapprehension in the minds of France and, to a less extent, of Great Britain also. Though foreign nations can have little to say about the manner in which Herr Hitler consolidated his ascendancy by the repression of the opposition parties and constituted his office into a naked dictatorship, such unification of control and power is naturally viewed with alarm elsewhere. On more than one occasion, Herr Hitler passionately avowed his intention to preserve the peace of Europe and the world. But his pursuit of the freedom of Germany to rearm created situations in which more liberal Foreign Ministers than Sir John Simon would have been hard put to it to back up the German claim. Whatever the count of German blunders, it cannot be beyond the power of France and Great Britain, who began the year well with the recognition of the principle of Germany's equality in armaments, to preserve the machinery of the Disarmament Conference and spare the world, the agony of contemplating an unrestricted progamme of armaments and the consequent threat of a world-wide war. Particularly regrettable is the haste with which Sir John Simon precipitated the breakdown of the negotiations between Germany and the Powers and hastened the German decision to withdraw from the Conference and from the League.

Economic War between Britain and Russia

Another significant rift in international goodwill, which was happily made up before the end of the year, was the decision of Great Britain to initiate an economic warfare with Russia as a reply to the latter's arrest of a few British engineers on a charge of economic sabotage. On April 4th the British Government introduced a bill to prohibit by proclamation all imports from Soviet Russia; and Moscow answered, on the 21st of the month, with a ban on British goods and services. Fortunately the personal contact between Russian and British diplomats, brought about by the World Economic Conference at London, enabled the *rapprochement* ; and since then negotiations have been going on for an Anglo-Russian trade treaty for the advantage of both countries.

From War Debts to Economic Conference

In the sphere of economy, the failure of the World Economic Conference and the repudiation of the tariff truce by all the participating countries stand out as the most deplorable development of the year. 1932 did not furnish any happy opening for the ensuing year. For in December the question of the War Debt payments came in. Neither the full length notes sent by the British Government nor the more cryptic despatches from France could bring about an understanding between the debtor and the creditor countries. To this day, the differences remain uncomposed; and the distinction between France and her friends who defaulted, and Great Britain, which on that occasion paid in full, is now getting slowly blurred. On July 15, 1933, America accepted a token payment from Great Britain in silver which was valued by the American Government at very much over the prevalent market price, with a view to make a beginning in those measures for rehabilitating silver on which the American Government had set their heart. Towards the end of 1933, the worn-out device of token payment had helped the contending parties to save their faces, while the wholesale defaulters were probably patting themselves on the back for deciding to bow to the inevitable well in advance of its time.

Mr. Roosevelt Takes the Initiative

It must be said that the discussions of December, 1932, on the question of War Debt payments kindled in the American authorities a desire to thresh out all the connected problems in a World Economic Conference. It will be remembered that the labours of the Preparatory Committee in 1932 were abortive chiefly because America and France could not persuade Britain to return to the gold standard on conditions which they could reasonably fulfill. The months that elapsed since the failure of the Preparatory Committee found public opinion in Great Britain veering to the view that Great Britain had in her reply to America and France demanded the wellnigh impossible and that fresh efforts should be made to tackle the problems of world economy in a full international conference. America was spurred by the knowledge that, unless she lent a hand in the uphill task of rescuing world trade from the deprsesion, there was no hope of securing the debts that were owed to her by foreign nations on War Debts or other account. By January 20th, the Preparatory Commission had in a second session drawn up and issued a draft annotated agenda which, though lacking in importace by itself, showed that international opinion was favourable to the convention of a world economic conference. By the end of February it was recognised both in Europe and in America that War Debts and the general economic situation required parallel discussions and negotiations. On January 25th the United Kingdom accepted the invitation of the United States to open War Debt negotiations in March; and on the 1st of February the British Ambassador began his conferences with Mr. Roosevelt, which were recommenced on February 22nd, this time by the French Ambassador also.

Banking Crisis in U. S. A.

It would be interesting to speculate on the course of the World Economic Conference, if the domestic economy of the United States of America had not developed a gravely critical situation and Mr. Hoover had not been succeeded by Mr. Roosevelt with his bold and audacious plans for national recovery. Such speculation is, however, too speculative and futile; and by the end of February and the accession of Mr. Roosevelt at White House, the whole of America was threatened with irretrievable bankruptcy and involved in a moratorium in which the transactions of ordinary economic life became impossible to be put through. The diary of world events, which we provide at the end of this section, furnishes an accurate and detailed account of the development of the banking crisis in America. And it should suffice to point out here that the most threatening phase of the banking crisis began with the closing down of the Union Guarantee Trust Company on the 14th February, 1933. From that day the closure of banking institutions raged like an epidemic over the whole of the United States. Banking holidays were declared in one state after another, after it was found that the power to limit withdrawals was of no avail. The Governors of these states assumed dictatorial powers and by March 3rd nearly 37 States were under the banking holiday.

New President Arrests the Rot

It was such a situation that Mr. Roosevelt was called upon to face when he entered White House on March 4th. Mr. Roosevelt was helped in his task of resolving the crisis, firstly, by the knowledge that the crisis was solely the result of internal conditions, and secondly, by the fact that he had far in advance of his accession to office thought out the main problems of American economy and had evolved for himself ideas of incalculable directive value. His first task was to stop the disintegration of American finance and then to provide more stable foundations for the structure of national economy. His first measures were directed to a revival of confidence in the banks and early resumption of normal banking business. Mr. Roosevelt knew that the troubles which came to a head before his accession to office were the result of the intolerable weight of indebtedness consequent on the fall in the general level of prices. The financial position of banks was particularly affected and banking failures in large numbers had been a feature of the domestic economic situation for some years. When confidence was thus impaired, a large scale hoarding movement sprang up which denuded the banks of all their stocks of gold and created conditions in which no bank could carry on its ordinary business. Mr. Roosevelt, therefore, decreed within a day or two of his assumption of office a national banking holiday, prohibited all foreign banking operations to prevent the efflux of funds, and imposed an embargo on the export of gold and silver and empowered the Treasury to have restricted operations including the issue of clearing certificates and authorising the creation of special accounts. By far the most important of the emergency measures was the imposition of penalties on failure to return the gold withdrawn by private depositors for purposes of hoarding. The effect of this threat was instantaneous; and within three days 200 million gold dollars returned to the Federal Reserve Banks. Mr. Roosevelt thereafter provided emergency money for the banks; and on the strength of this 400 banks in 12 Federal Reserve districts reopened by March 31st. This resolute handling of the position revived confidence. Foreign exchange dealings were resumed though on a limited scale; and, by March 15, there was a general reopening of all banks in the United States and 300 million dollars of gold were returned to the Federal Reserve banks. On April 6th, the President signed two decrees one authorising gold payments for commercial transactions and the other forbidding under heavy penalties the retention of more than 100 dollars in gold by private individuals.

America Abandons Gold

The crisis thus staved off, it remained to attempt and accomplish the work of reorganisation. As the collapse of American economy was due to the inflated value of the dollar, no reconstruction would be possible except on the basis of the devaluation of the national currency. And in this, Mr. Roosevelt acted with characteristic courage. It is not clear whether Mr. Roosevelt had formulated for himself all the measures which comprise his famous Recovery Programme; but judging by the facts that are known to one and all, it would seem that at the beginning he had set more hopes by international co-operation than by the economic nationalism, on which he made his final choice during the deliberations of the World Economic Conference. It would, perhaps, be better to set out the facts in their chronological sequence, leaving the conclusions for the reader to make for himself. On April 6th Mr. Roosevelt issued the final invitations to the British Prime Minister and to the French Government to visit the United States to conduct preliminary negotiations for convening the World Economic Conference. On April 8th similar invitations were issued to other important countries. But while Mr. Ramsay MacDonald and M. Herriot were on their way to Washington, the President decided on the principal plank of his Recovery programme, namely, the devaluation of the dollar. On April 20th the embargo on gold exports was reimposed; and on the same day the amendment to the Farm Bill was moved by Senator Thomas constituting the Presidency of the U.S.A. into a monetary dictatorship. If Mr. MacDonald and M. Herriot had taken to heart this apparent affront contained in the American President deciding a matter which might reasonably be presumed to be a matter for discussion amongst them, the World Economic Conference would, perhaps, not have been held at all.

World Economic Conference

Thanks to the liberal and indulgent spirit in which Mr. MacDonald viewed Mr. Roosevelt's action, it was found possible to convene the World Economic Conference in London on June 12. There is little purpose in dwelling in detail on the doings of a Conference which subsequent events showed had never a chance of success. At the beginning it looked as though the Conference could proceed, though with considerable difficulty, from one stage to another. The disillusionment was not long in coming. At first, interest centred on the central bankers who met in a separate conference and arrived at an agreement on the question of the stabilisation of currencies. But Mr. Roosevelt refused to ratify the agreement and this refusal was a stunning blow. The delegates continued to meet and discuss but were unable to impart any reality to their discussions. When later Mr. Roosevelt began to address lengthy memoranda to the Conference calling attention to the desirability of every country attempting to raise the price level, it was clear that America, which took the initiative in convening the Conference was no longer a believer in the international co-operation as it was conceived and understood by Great Britain and the gold standard countries.

The Breakdown

It is quite understandable that when agreement was found to be impossible in the matter of the stabilisation of the exchanges, the Conference could not proceed with other questions such as the lowering of tariffs and trade barriers. Some of the committees like those on wheat and silver, which had a circumscribed field of enquiry, persisted with notable courage and had the satisfaction of bringing about agreement amongst the interests concerned. But taken as a whole, the Conference was destined to be a failure. A few scuffles between the gold standard countries, on the one hand, and the non-gold countries, on the other, with Great Britain in an unenviable intermediary position were all that the Conference could afford to a world, which insisted on being regaled either with the news of a total failure or with other equally sensational turns. The reactions of the gold standard countries to the opinions and actions of Mr. Roosevelt provided for a time such sensation. France, Holland, Belgium and Italy drew together in defence of the international standard and bound themselves to mutual help and succour in case of danger to the currency of any one of them. At a time the guilder was dangerously on the brink of devaluation; but it was finally saved. The franc, too, was threatened though in a less menacing manner. And well might the gold standard countries feel that the World Economic Conference by its failure could do actual harm to world economy and finance. Even after these sensations, the Conference continued to drag on as its sponsors were not clear how best they could save their faces. Ultimately they found the means of keeping the Conference technically alive.

Fillip to National Policies

With the delegates of the World Economic Conference back in their homes, the Governments found that they had no alternative to national economic policy. They cannot possibly sit with folded hands merely in the hope that at some date in the future concerted international action would be possible and all-round trade revival might eventuate. The tariff truce was abrogated by the participating nations one after another. The gold standard countries took all the precautions that were necessary for the protection of the integrity of their currencies. Great Britain took up the broken threads of her policy of negotiating bilateral trade agreements; and by the end of the year she had concluded trade treaties with the Scandinavian countries, with Argentina, with Germany, to mention only the more important of the countries with whom she has commercial relations.

N. R. A. in America

But the attention of the world was rivetted on the Recovery Programme which Mr. Roosevelt considered himself free to pursue as soon as the World Economic Conference had dispersed. Readers of *Indian Finance* are only too familiar with the outlines of the Recovery Administration. The crucial idea is to lighten the weight of indebtedness by depriving the gold clause in all contracts of its depriving the gold clause in all contracts of their legal validity. The next step towards recovery may be deemed to have been taken when in anticipation of the devalution of the dollar there was a general rise in share and commodity prices. Once these two changes had provided the machinery of American economy with freedom of movement, Mr. Roosevelt thought that it would be best in the interests of all concerned to restore the balance between production and consumption by bringing about an increase in employment and in wages. It would be necessary in order to procure the consent of employers to a rise in wages, decrease in working hours and expansion of employment to assure them of healthy conditions of business; and this Mr. Roosevelt sought to provide by bringing about codes of fair competition in each industry, to which all the producing units are to adhere and to apply the blanket code for industries which are not able to produce specific ones for their own usage.

The history of the latter part of 1933 is largely the history of Mr. Roosevelt's Recovery Programme. It is a matter of common knowledge that those, who have not taken kindly to the President's experiments, have succeeded in engineering a good deal of hostile and uninformed criticism in the press in all parts of the world. The measures connected with his specific and blanket codes may, in a superficial view, be considered to contain many an economic contradiction. While these may be considered to be the exclusive concern of the internal economy of the United States of America, Mr. Roosevelt's monetary experiments are of world-wide significance. And it is in this sphere also that the President showed himself to be lacking

in clear-cut ideas and programmes, though it must be added to his credit that he was fully prepared to tread the path of trial and error and to be receptive to new ideas and criticism. The specific measures and their results and significance will be examined in another article on "International Finance in 1933." Here it should suffice to say that throughout 1933 Mr. Roosevelt did little to lessen, or rather did much to accentuate, the uncertainty and chaos of international exchanges. As soon as it was found that the mere threat of inflation and the sight of a drooping dollar would not be sufficient to sustain the higher level of prices, much less to take them up still further, Mr. Roosevelt changed his ideas in relation to gold. Mr. Roosevelt took up the new policy in regard to gold, beginning with a relaxation of the embargo on the export of gold amalgams and ending with his well-known policy of gold purchases at home and abroad through the Reconstruction Finance Corporation. The year closed with the gold policy clearly ineffective as regards prices and with rumours afloat in all the financial centres of the world regarding negotiations between America, Great Britain and France for an agreement on the stabilisation of currencies and exchanges.

The year thus closed with the eyes of the world still fixed on Mr. Roosevelt and his gigantic effort to lift the present depression. This is hardly the place in which to examine the failures and the achievements of the various parts of Mr. Roosevelt's Recovery Programme. We are more concerned to point out that the genuine interest shown in it in despite of the numerous reports and prophecies of failure, shows that the significance of a breakdown of World Economic Conference was grasped, though only vaguely and instinctively, by the nations of the world. It is doubtful if those, who are not wedded to the old-world conceptions of free trade and *laissez faire*, feel much regret in the proved incapacity of the governments of the world to agree upon a common programme of action in regard to world economy in its present state. It is doubtful, too, if its necessary implication of the need for national reconstruction, if only as a preliminary to a later attempt at international co-operation, is after all so distasteful as some have tried to make out. At any rate, the fact remains that, whatever the nations might attempt or do in a common conference, each government will have to tackle its own problems with its available means; and it would be well that such reconstruction should be attempted during a period in which the general interdependence of nations has been loosened by the depression than when the mechanism of international economy works in closer and more delicate interrelation. The bold policy adopted by President Roosevelt was to some extent the cause, and in many instances the pretext, for other national governments following a policy of isolated attempts at reconstruction of national economy.

Silent Recovery

Behind the conflict of theories and facts, of professions and practices, there has been during 1933, the operation, however slow, of the natural forces of recovery. Though it would be reasonable to presume that the assertion of such natural forces has been within the sphere of each national economy rather than the loose system of international economy as a whole, world trade has, during the latter part of the year, benefitted considerably by the assertion of such forces, with the result that in nearly all the important countries of the world, there was a considerable increase in foreign trade. But taken as a whole, 1933 shows a further fall in foreign trade and in production from the low levels of 1932 as the following two tables will show:

INDUSTRIAL PRODUCTION IN VARIOUS COUNTRIES.

(Monthly Average 1929 = 100).

DIARY OF EVENTS IN 1933

INDIA.

January 9. His Excellency the Governor of Bengal opens the Annual General Meeting of the Associated Chambers of Commerce of India.

February 15. Reduction of the Imperial Bank rate to 3½ per cent.

16. Railway Budget presented to the Legislature.

20. Budget session opens in the Bengal Legislative Council.

28. The General Budget presented to the Central Legislature.

March 18. Publication of the White Paper.

20. Cotton Industry Extension of Protection Bill is passed by the Legislative Assembly.

21. The Bill to extend the wheat export duty for one year is passed.

26. The two Bills are passed by the Council of State.

April 5. His Excellency the Governor of Madras opens the Pykara Hydro-Electric Scheme.

12. Indo-Japanese Trade Agreement's abrogation as a result of the Japanese goods flooding the Indian markets.

28. The opening of the cash and conversion sections for the 3½ per cent. 1947-50 Loan.

May 30. The Annual General Meeting of the Bombay Presidency Trades Association at Bombay.

June 15. Inauguration of telephone service between London and Calcutta and London and Madras.

July 1. The outstanding balance of the 4 per cent. Conversion loan 1916-17 repaid at par.

4. The Preliminary Jute Forecast is published.

5. Extension of the appointment of the Tariff Board to 31st March 1934.

31. The Report of the Reserve Bank Committee signed in London.

August 28. Workmen's Compensation Act (Amendment) Bill is passed by the Legislative Assembly.

September 1. The outstanding balance of the 5 per cent. 1933 bonds repaid at par.

13. The final Jute Forecast is published.

15. The Indian Tea Restriction Bill passed.

18. First informal conference between the Lancashire Delegation and representatives of the Indian cotton mill industry at Bombay.

October 7. Vizagapatam harbour opened for admission of ocean-going vessels.

14. Agreement reached in principle on the main problems in the trade talks between India and Japan.

23. Japan's acceptance of India's proposals to exchange piecegoods for cotton.

22. Opening of the proceedings of the Select Committee on the Reserve Bank Bill.

23. The Select Committee on the Reserve Bank Bill and the Imperial Bank Bill meets in Delhi. Resumption of trade talks in New Delhi.

October 30. Agreement arrived at in regard to cotton textile tariff.

November 6. All-India Railwaymen's Federation held in New Delhi.

7. The prospectus of ten million sterling loan issued by the Secretary of State.

15. The Indian Tea Control Act (XXIV of 1933) comes into force.

December 1. Appointment of a Board of Economic Enquiry for Bengal.

8. The new Bombay Governor arrives in Bombay.

INTERNATIONAL

Jan. 9. Preparatory commission's second session for Monetary and Economic conference.

20. Close of the Preparatory Commission and the publication of the Draft Agenda for the Monetary and Economic Conference.

25. United Kingdom's proposals to U.S.A. to reserve discussions of the economic problems for the Monetary Conference.

February 24. League's decision against Japan.

March 16. The British Disarmament plan laid before the Conference.

20. Signior Mussolini's Four Power Peace Pact.

27. Notice of withdrawal from League by Japan.

April 26. An agreement that the World Economic Conference shall meet in London on June 12, was reached by Messrs. Roosevelt, Macdonald and Herriot.

May 16. Roosevelt's call for an immediate World Economic Conference addressed to 44 nations.

24. Tariff Truce call to nations.

June 1. Adjournment of the Disarmament Conference.

8. The opening of the International Labour Conference at Geneva.

12. The king opens the World Economic Conference.

16. Acceptance of the British finance for discussion in the World Economic Conference.

17. Formation of the U. S. Delegation for the Economic Conference against Tariff cuts.

21. America disinterested in the World Economic Conference.

22. Producers' agreements arrived at the World Economic Conference. America expresses her opinion that stabilisation would be untimely.

July 8. Gold countries' representatives decide on measures to maintain their currencies.

10. European countries on wheat export. Total figure agreed.

11. Only non-controversial subjects to be discussed at the Monetary and Economic Conference.

12. Formation of Tin Committee at the World Economic Conference.

14. Wheat conference arrives at a virtual agreement.

15. The signing of the Four-Power Pact.

17. Formation of Coffee Committee at the World Economic Conference.

21. Virtual break down of the wheat negotiations.

22. At the World Economic Conference holding and producing countries of silver arrive at an agreement.

July 27. Adjournment of the World Economic Conference.

Aug. 25. Conclusion of Wheat Agreement ; Internal price fixed at 63.02 gold cents.

Oct. 9. Revision of Reichbank Law not opposed by B. I. S.

U. S. A.

February 14. The Union Guarantee Trust closes down cuasing a new Banking crisis.

25. The Bill to curtail withdrawals from the National Banks signed by President Hoover.

March 2. Rise of bank-rate from 2½ to 3½ per cent.

5. Climax of the banking crisis and two bank holidays and closing of all commodity

markets immediately preceding the inauguration of President Roosevelt.

March 6. Four bank holidays declared throughout U. S.

7. Leading banks re-open with restrictions.

9. Bank Re-organisation Bill signed by the President. Gold embargo to continue.

10. Budget balancing ; drastic plans.

11. The Economy Bill passed by the House of Representatives.

13. Resumption of operations by 400 banks.

15. New York Stock Exchange and commodity markets re-open.

16. President's message to Congress urging Farm Relief measures.

April 6. Bank-rate reduced from 3½ to 3 per cent.

19. Abandonment of the gold standard. Room in stocks and Commodities and soaring of the foreign exchanges against the dollar.

May 5. In a speech to the U. S. Chamber of Commerce the President discloses his intention to use his inflationary powers.

16. A call by President Roosevelt addressed to 44 nations for a World Economic Conference.

25. Bank rate comes down to 2½ per cent.

June 1. Willingness of President Roosevelt to confer on War Debts.

16. National Industry Recovery Act signed by the President.

17. U. S. reminder to France on default.

17. The President orders public works involving $100,000,000 under the N. R. A.

19. Rise in Wall Street prices due to the instability of the dollar.

30. Revenue deficit of $1,750,000,000.

July 15. Steel and oil industries submit to the codes.

28. Roosevelt encounters difficulties in his Recovery Programme. Strikes and disturbances in the textile industry and coal fields.

August 1. Increasing labour troubles. Publication of the Blanket Code.

8. Code in relation to grain industry and price stabilization.

19. Approval of steel industry code. Increasing Flight of American capital.

28. Meeting of Mr. Norman and President Roosevelt. Increasing credit facilities promised for "Blue Eagle" concerns.

29. Roosevelt permits sale and export of newly mined gold.

Septr. 14. Roosevelt's talk with inflationists. Mr. Woodin on the possibility of a balanced budget.

16. Coal Code signed: New York imposes Heavy taxes on operations in Wall Street and consequent formation of National Stock Exchange in Newark.

19. Immediate inflation demanded by farmers.

25. City authorities try to prevent removal of Stock Exchange by offering compromise on Wall Street taxes.

Oct. 5. War debt talks begin between America and Britain.

6. Formation of a Committee to enquire into stock exchange methods.

19. Reduction of bank rate to 2 per cent.

24. New Gold policy in force. Gold price raised by $1.56.

26. Gold price fixed at $31.54.

28. Gold purchase abroad authorized by the President. Refusal to accept the informal offer of 10 per cent. by Britain.

Nov. 5. War debts talks breakdown. U. S. A. rejects Britain's offers.

10. *In London,* dollar rate reaches 5.17½ Price of gold fixed below the world level.

15. Inflationists in the Treasury, Consequent on the dropping off of the "sound money" men, Woodin and Acheson.

17. Recognition of Soviet Russia by U.S.A.

November 21. Dr. Sprague resigns.

Dec. Senate Committee to draft Banking and Stock Market Reform Legislation.

5. End of prohibition.

22. Roosevelt hopes that other countries will follow his lead on the silver policy.

29. Issue of Roosevelt's new gold order strengthening the powers of the Treasury to impound gold.

GREAT BRITAIN.

January 6. Home market seriously threatened by Japanese competition and a consequent demand for higher duties by the British rayon producers.

13. Lifting of the embargo on capital issues with the exception of foreign issues and voluntary conversion of Trustee securities.

28. Kaffir shares blazing ; one of the busiest day for years.

30. Cabinet's discussions on War Debts.

February 1. Negotiations with Mr. Roosevelt in regard to War Debt conference open.

2. Rise of American Dollar from 4.02 to 4.20.

23. Offer to convert 4 per cent. Stock of the £9,621,000 New South Wales into a new Commonwealth loan.

March 5. Dealings in foreign currencies suspended.

7. With the exception of the Dollar, dealings in all foreign currencies resumed.

8. Britain's grant of £156,570 to Newfoundland to tide over her financial difficulties.

18. Out of the maximum of £45,000,000 of Treasury bills the Treasury announces a new 2½ per cent. conversion loan 1944-49 for £5,000,000. Government plans the Indian Constitutional Reform and the publication of the same in White Paper.

21. Trade negotiations with Russia suspended as a result of the arrest of four British Engineers.

31. A deficit of £32,278,989 exhibited at the close of the financial year.

April 4. The Government introduces a Bill to prohibit all Russian imports as a result of the arrest of four British Metro-Vicker Employees.

23. President Roosevelt and Mr. MacDonald open conversations at Washington.

25. A New Trade agreement with Denmark. The signing of the Trade agreement with Germany announced in Commons.

May 1. Anglo-Argentine Trade Agreement entered into.

8. The control of Boots Pure Drug passes into British hands by acquisition 1,000,000 ordinary shares.

20. The meeting of Reichsbank President with the Governor of the Bank of England.

June 12. Committee formed to represent all British long term creditors of Germany.

14. Announcement in Commons of the Government's intention to pay in silver £10,000,000 to U.S.A. on account of War Debt.

16. Mr. Woodin, Secretary of the U. S. Treasury, rejects the proposal for temporary stabilisation.

21. Treaty of the Anglo-Danish Trade in force ; Dollar rate closes highest since 1931.

July 1. Two British engineers released by Russia: Britain lifts embargo: Anglo-Russian Accord reached.

18. Rubber shares boom. Largest demand since 1925.

21. U. K. 5½ per cent. Dollar Bond conversion approved by Commons.

27. Anglo-Finnish Trade Agreement signed.

August 9. Pig marketing scheme adopted by farmers.

August 10. The withdrawal of the Peter Walker Debenture conversion plan.

18. Conversations on Wheat Agreement begin.

22. Textile Delegation leaves for India.

Sept. 4. Meeting of Trade Union Congress.

12. New 3¾ per cent. £21,000,000 Conversion Loan.

22. National Debt total highest for 10 years. Supplementary Anglo-Argentine Trade negotiations concluded.

27. Departure of Sir Robert Lindsey for Washington to conduct War Debt negotiations .

October 16. London Financial Circles very calm on receipt of Germany's decision to leave the League.

19. The committee for British creditors of Germany approach the Government on new discrimination.

27. From January 1, Tin quotas to be raised to 40 per cent. for 1934 ; Special additon of quota of 4 per cent. to be granted.

November 6. Dollar-Sterling rate touching 4.93 which was the highest since August, 1914.

7. Britain to withdraw from Tariff Truce ; Another payment of $7,500,000 to be made as December War Debt instalment.

15. The notification of Reichsbank to the Bank of England that grounds for prolonging Transfer Moratorium after 31st to continue to exist and calls conference for December 5, in Berlin. Britain's threat to France to remove surtax on British goods.

17. Trade improvement at home emphasised by the King's speech.

December 5. The door for honourable settlement with Irish Free State still open according to Mr. Thomas. The continuance of 'Penny a mile, travel throughout 1934.

8. Mr. Chamberlain's hint at Government aid for shipping.

9. That there is no case for modified debt arrangements was stated by British representatives to Dr. Schacht.

14. Under the auspices of the Bank of England, plans for formation of company to make medium—term advances to small industries are complete.

15. Sanctity of 'Gold Clause' established by the judgment of the House of Lords.

27. Britishers' strong protest to Dr. Schacht against the payment, of only 30 per cent. cash for interest.

29. Government backs the bondholders in their protest against German default.

GERMANY.

January 21. Stringent control of foreign accounts, especially those created before July 16, 1931, in Germany.

30. Hitler becomes Chancellor of the Reich.

February 1. The dissolution of Reichstag and date of new election fixed as March 5th. Hitler's announcement of a four year plan for restoring Germany to prosperity.

14. The renewal of International credit to Reichsbank.

17. The renewal of the Standstill Agreement for the period March 1, 1933, to Feb. 28, 1934.

27. The burning of the Reichstag.

March 3. Signing of the Stand-still Agreement.

5. Nazi-Nationalist coalition gets a majority of 16 seats in Reichstag.

9. Nazis assigned as State Commissioners.

17. Dr. Schacht becomes the Governor of the Reichsbank.

23. Passing of the Enabling Bill.

April 7. Dr. Schacht's assurances as to Germany fulfilling her commercial obligations.

May 7. Renewal of the German—Soviet Treaty.

17. The Proclamation of the Peace Policy by Herr Hitler.

18. Foreign Exchange Control still more strengthened.

29. The conference with foreign creditors opens : Imposition of a tax of 1000 marks on Visa to German tourists going to Austria.

June 2. Intention to a declaration of Moratorium by Dr. Schacht.

8. Transfer Moratorium of foreign debts declared ; Germany's decision to repay $45,000,000. Rediscount credit of the Gold Discount Bank.

30. Moratorium in a modified form.

July 1. Roosevelt's refusal to ratify stabilisation plan of gold countries.

6. Dollar slumps from 4.57 to 4.77.

12. Transfer Moratorium modified by Reichsbank.

August 10. Britain Protests on Germany's passage money transfers.

18. Withdrawal of currency restriction on foreign shipping.

Sept. 21. Announcement by Dr. Schacht : Reichsbank to apply for liberty for open market operations for the purchase of Government obligations and also for the abolition of control by Reichsbank's general council.

23. Arrangements made for Swiss and Dutch creditors to get 100 per cent. for their interest scrip in return for additional exports from Germany.

October 1. Creditmark or Registermark balances can be transferred in future, only through the conversionskasse, which will either issue scrip or open credit against the balance.

14. Withdrawal from Disarmament Conference and decision to leave League of Nations. November 12, fixed as the date for election and referrundum on Hitler's policy.

18. Prefertntial Treatment accorded to Dutch creditors on the same lines as to the Swiss.

November 12. Hitler and Nazis given an overwhelming verdict by the voting in Election and Referrundum.

December 5. Conference between Dr. Schacht and representatives of Germany's foreign creditors.

6. Reichsbank's request to big German companies possessing some outstanding Dollar Loans to make conversion offer to german holders of bonds.

18. New German Default. Cash transfer on Debt cut from 50 to 30 per cent.

FRANCE.

Jan. 10. France's deficit amounted to £84,870,000 at par.

February 1. The New cabinet formed by M. Daladier.

March 9. The approval of 10,000,000,000, f Consolidation Loan by the French Senate.

April 21. Definitely declared that both France and Holland are to remain on gold.

28. Credit of £36,000,000 to French Treasury by group of British Banks.

July 18. France raises her Tariffs.

September 13. A *raproachement* sought between gold standard countries.

18. Beginning of the Anglo-French Diarmament discussions.

Oct. 24. The fall of Daladier's Government.

26. Formation of Sarraut Cabinet.

November 24. Fall of the same.

27. Chautemps cabinet comes to power.

28. 15 per cent. surtax on British goods to be withdrawn.

December 11. Passing of the Finance Bill in the French Chamber.
21. Satisfactory end of the Anglo-French negotiations on the surtax.
22. The breakdown of Franco-German trade talks.
25. The Senate approves the Finance Bill.

JAPAN.

January 3. The occupation of Shanhaikwan by the Japanese.
February 30. The decision to withdraw from League if the report of the Committee of 19 is approved by the Assembly.
March 24. Advance into Jehol by the Japanese.
27. Japan's formal notice to withdraw from the League of Nations.

IRISH FREE STATE.

January 28. Majority for De Valeva in Dail.
February 9. De Valera becomes Prime Minister of Irish Free State.
September 7. New United Ireland Party issues manifests.
8. Ireland withdraws from Economic Conference Custom's truce.

RUSSIA.

April 12. Trial against the four British Engineers opens.
21. With ban on British goods and services Russia meets British embargo.
May 12. Foreign Commissiriat to sell Chinese Eastern Railway announced.

OTHER COUNTRIES.

January 19. South African £ reaches parity with sterling.
February 28. The conversion of New Zealand's internal debt to 4 per cent. basis.
March 7. Japanese reach the Great Wall of China.
April 6. The introduction of New Silver-dollar by the Government of China (100 Silver dollars =71.5 taels).
24. Redemption in gold of Dominion notes suspended by Canada.
29. Settlement of the Anglo-Persian oil dispute.
May 23. Japan-China Truce.
June 17. $50,000,000 Loan to China by U. S. reconstruction Finance Corporation.
July 13. Australian conversion of £17,000,00 6 per cent. State Loans into 4 per cent. 1943-48 at 99.
14. Reduction of Dutch Bank rate from 4½ to 4 per cent.
17. Reconstruction scheme of Creditanstalt completed.
20. Argentine chamber approves Anglo-Argentine Trade agreement.
28. Dutch Bank rates reduced to 3½ per cent.
August 10. Cuban Revolution.
14. Roumanian Transfer Moratorium.
September 2. Lowering of Italian Bank rate from 4 to 3½ per cent.
September 18. Dutch Bank rate lowered to 2½ per cent.
19. Increased taxation and fresh economies restored to balance Dutch Budget.
October 4. Australian Budget reveals reduction in taxation and an increase in expenditure.
November 29. Denmark and Sweeden reduce their Bank rates from 3 to 2½ per cent.
December 7. Australia issues $16,647,000 3¾ stock for converting 5—5½ per cent. State Loan.
8. Italian Bank rate reduced to 3 per cent.

INTERNATIONAL FINANCE IN 1933

LONDON GAINS FROM DISTURBANCES ABROAD

Though international finance in 1933 was subject to more than one sensational turn as a consequence of the fluctuations in the fortunes of the World Economic Conference and the bewildering experiments of Mr. Roosevelt in the sphere of his monetary and exchange policy, so far as the money market is concerned, there was a singular absence of strain. In fact, 1933 may be said to have developed further the advantages which were visible in 1932 as a direct result of the abandonment of the gold standard in England and the freedom of the authorities in that country to pursue a policy of easy money. In fact, London, which counts most in international finance, was even embarrassed by the plenitude of funds resulting from a variety of causes. While the recovery of trade which it is London's main business to finance was not sufficient to make any appreciable demand on the surplus funds of the market and in the latter part of the year only had the effect of enabling a liquidation of bank loans and an accentuation of the phenomenon of unlendable money, the developments abroad served to create a phenomenal inflow of foreign funds into London—an inflow which may be said to have characterised the whole of the year under review. The banking trouble in America which culminated in the crisis of February-March had very early in the year set in motion the flight from the dollar of which the pound was the principal beneficiary. And in the middle of the year, the scare, that was caused in respect of the stability of the gold currencies following Mr. Roosevelt's refusal to ratify the agreement arrived at the Central Bankers' Conference at London, also made London the refuge of nervous foreign depositors. That such influx of money had the effect of strengthening the pound as against currencies gold and non-gold is a matter which will be referred to later in this section. Here it should suffice to say that the efforts made by the authorities in Britain to counteract the unwelcome rise in the exchange value of the pound meant a diversion of part of the surplus funds in London to investments abroad which should have been felt by the London market as a welcome relief from the embarrassments of too heavy surpluses.

Surplus Funds in London Market

One result of this influx of funds into London was the exceptional ease with which the Bank of England was able to add to its stocks of gold. It must be remembered that in the first quarter of the year, America was on the gold standard and there was freedom of movement for both the money and gold towards London. During the first two months of the year, the Bank of England buying gold through the Exchange Equalisation Fund added £30.6 million to its stocks of gold. And by the time America suspended gold standard and imposed an embargo on gold exports the Bank of England had increased its holdings by yet another £28.3 million making up a total of £178.5 million. Thereafter, England stood to gain by the nervousness felt in regard to the Dutch guilder and the Swiss franc. It will be remembered that during the period of insecurity brought about by the failure of the negotiations for stabilisation, the Dutch guilder was hit the hardest. The ignorance of the public in regard to the normal procedure of the Bank of Amsterdam in dealing with applications for gold in paying out gold only on applications received before a certain hour was responsible for the impression that the Bank of Amsterdam had suspended gold payments and had, therefore, decided to abandon the gold standard. When, however, the position was explained and France and the other gold standard countries rallied to the rescue of Holland in pursuance of the agreement amongst them confidence in the guilder was restored.

Increase in Bank of England's Gold Stocks

It would seem as though the Bank of England was in the matter of the influx of funds and of gold the favourite child of fortune throughout the year. First it was the loss of confidence in American banks, then the nervousness in regard to the gold standard countries following the breakdown of the stabilisation negotiations. Later, and towards the close of the year it was the prevalent feeling that the franc, too, was doomed to devaluation partly because Mr. Roosevelt was pursuing an aggressive tactics and more because there was little evidence of a desire or a determination on the part of the French politicians to balance the heavily unbalanced French budget. Owing to these favourable circumstances, the Bank of England's gold stocks rose by August to £190 million and it was believed that even during the autumn of the year it was found possible for the Exchange Equalisation Fund to effect purchases in Paris.

Lack of Outlets for Investment

Though this vast addition to the gold stocks of the Bank of England is at first sight a welcome development, it is no use overlooking its somewhat disquieting significance. It was solely the resultant of an influx of foreign funds into London and with the memories of 1931 too green in their minds, the authorities could not help contemplating the possibility for some reason or other of an outflow of such funds and causing embarrassments similar if not equal to those of the summer of 1931. Mr. Neville Chamberlain utilised every opportunity to emphasise this aspect of the matter and it is to the financial wisdom of the authorities in Great Britain that they never missed the real significance of the developments of the year. So far as the money market was concerned, the influx of funds meant only a more severe competition for the available avenues of investment. It must be remembered that, as a result of the conversion and financial operations of 1932, the normal requirements of the Treasury in respect of short term accommodation for the market had been cut into severely. And but for the issue last May of £200 million of Treasury Bills for the special purpose of the Exchange Equalisation account, the volume of Treasury Bills far from showing an increase from 928 to 939 million would have shown a decrease.

Decline in Discount Rates

There was thus a virtual decrease in what had come to be the only channel of investment open to the market. And the only relief that was available was the virtual devaluation carried out by the Bank of England in the reduction of the fiduciary issue from £275 million to which it had been increased in the 1931 crisis to the normal figure of £260 million. There was also a reduction of £53 million in the bank's holdings of securities. These together with a slight increase in the cash percentage of the clearing banks accounted for a little mitigation in the pressure of surplus funds on the market. In the middle of the year the French Treasury came on the London market for a temporary accommodation of £30 million. Though the French banks were quite in a position to find that amount, it was widely believed in French banking circles that in the state of the national budget and finance at the time it would be best to leave the Treasury to find its requirements of short term money from foreign centres, so that the incentive to economy would be all the greater. Whatever that might be, this credit, which was granted in May with option of repayment in part or whole between the third and the sixth month, came in handy for the London market.

In such circumstances, it is inevitable that discount rates should decline to record low levels. The lowest point was reached in September when hot Treasury Bills were quoted in the market at ¼ per cent. and the tender rate touched the record low average of 4s. 9. 15d. per cent.

American Policy Dominates Exchanges

The history of the principal international exchanges may be adequately indicated, if it is pointed out that the year may be roughly divided into three periods, the first, in which the determining factor was the loss of confidence in American banking with the consequent flight from the dollar, the second, marked by the instability of the gold currencies as a result of the breakdown of the Stabilisation Agreement and the general floundering of the World Economic Conference, and the third, in which President Roosevelt carried out his monetary experiments with a rapidly depreciating dollar. Taking the American policy first, it may be said that President Roosevelt was at first content to watch the effects of the mere promise of inflation and the fall in the dollar on share and commodity prices. When later it was realised that a low exchange by itself would not suffice to sustain prices and that, even if the markets were to take the cue from it, speculation is bound to be overdone with the consequent collapse in prices, he decided to bring about a depreciation in the gold value of the dollar by carrying out a new policy specifically in relation to gold.

Mr. Roosevelt's Gold Purchase Policy

The beginning was marked by the buying of gold above the Federal Reserve Bank's purchase price. At first, it is strange that Mr. Roosevelt should have thought at any time that the price, at which the American Government were prepared to buy gold, mined in America, would have any effect on the international value of gold or on the general level of prices abroad. But such a belief was entertained; and as soon as the disillusionment came, the President decided that an active policy of gold purchases both at home and abroad was necessary. The policy was announced in the usual dramatic manner by Mr. Roosevelt; and the Reconstruction Finance Corporation was empowered to carry out such purchases on the basis of prices to be declared from day-to-day. It was reported on the 25th of October that the first purchase was made at 31.36 dollars per fine ounce as against the Federal Reserve Bank's statutory buying price of gold of 20.67 dollars per fine ounce. Since then the price has been raised progressively, with a little halt now and again, until at the end of the year it reached 34.06 dollars.

Dangers to the Franc

It was generally feared that the gold purchase policy of the United States Government, together with the repeated failure of French Cabinet to tackle adequately the problem of the huge deficit of 6 milliard marks for the year 1934, would create a situation in which it would be difficult for France to continue on the gold standard. But it was realised at the same time that the United States could not succeed in making any purchases sufficiently large to cause embarrassments to the Bank of France, as the volume of American credits in foreign centres was quite inconsiderable and there was no other alternative means of putting through the deals contemplated by Mr. Roosevelt. The fund created for these operations was originally 50 million dollars but was increased later to 75 million dollars. It is estimated that about 50 million dollars of gold have been bought abroad and that the total credit of 75 million dollars is almost exhausted.

Movement of the Exchanges

These sensational turns were naturally reflected on the foreign exchange market and the Sterling-Dollar rate was found to move within a wide range. On April 20th there was a movement of 23 cents from 3.70 to 3.93 on the 28th July also 23 cents from 4.32 to 4.55, and on 27th November 21 cents from 5.04½ to 5.25½. During the first 3 months of the year the dollar exchange moved only within narrow limits, the highest and lowest being 3.48 and 3.32 5/8 respectively, but during the next three months, namely April-June, the exchange moved between 3.40⅝ and 4.41½. From July to September the rate ranged from 4.27½ to 4.87¼ and from October to December from 4.40 to 5.53. On July 19th the British Government issued an offer to convert the $250,000,000 United Kingdom 5½ per cent. dollar bonds into sterling ; this caused a temporary setback in the upward movement of the exchange.

The gold exchanges have also had important movements during the year in terms of sterling. Budgetary difficulties in France caused a weakness in francs at the beginning of the year and shipments of gold were made to New York. The exchange rose to 88⅛ in London on the 5th February, but purchases of francs for account of the Exchange Equalisation Fund steadied the rate and, the exchange rallied to 86 5/16 later in the month. During the banking holiday in the U. S. A. francs were on offer and the rate touched 89 on March 7th, but the operation of the Fund made the rate improve to 86 11/16 on the 13th March. Another break occurred in April when the U.S.A., definitely abandoned the gold standard and the rate touched 90, but by the 1st May the exchange was down again and touched 83 9/16. The Belgian exchange has been free during 1933 from the onslaughts of speculators to which it subjected in 1932, it being recognised that the belga was firmly attached to the French franc, which fluctuated in Brussels between 28.04½ and 28.26⅞. As referred to earlier, fears were expressed during the year that Holland might be forced off the gold standard, as large amounts of gold were withdrawn from that country, the gold holding of the Bank of Netherlands being reduced to Fls. 736 millions on the 10th July, from Fls. 1,032 millions at the end of December, 1932. Since July, however, the position has considerably improved and gold has been returning to the country. On the 23rd December the holding was 922 millions.

Changes in Standstill Agreement

An important development in the sphere of international finance is in respect of the Standstill Agreement. The renewal of the old agreement which expired on February 28, 1933, was duly made for another year up to February 28, 1934, with a revision of the terms more in favour of Germany. But subsequently during the course of the year alterations in the settlement have been effected, partly with the consent of the creditors, and partly as a result of unilateral action on the part of Dr. Schacht, the President of the Reichsbank. In fact, it may be said that Dr. Schacht's entry into the

Reichsbank in succession to Dr. Luther on March 17 was a turning point in the history of Standstill credits. Though on April 7th Dr. Schacht made a lengthy statement affirming Germany's intention to fulfill her commercial obligations in the succeeding months, he prosecuted vigorously a programme of conferring with the representatives of the foreign creditors and convincing them that in the position that obtained at the time it would be idle to expect Germany to fulfill her obligations under the Standstill Agreement. Shortly before the meeting of the World Economic Conference in London Dr. Schacht held a conference with the foreign creditors and before the meeting could hold a second session in London at the time of the World Economic Conference Dr. Schacht carried out certain measures in respect of the Reichsbank that tended to show the financial position in a more lurid light. He repaid the 45 million dollars of rediscount credit of the Gold Discount Bank and the result was a fall in the reserve ratio of the Reichsbank. At a time when the world was anxious that there should be no more deserters of the gold standard, it was naturally impossible for foreign creditors to demand that the Reichsbank should further weaken its position and get nearer the brink of devaluation by meeting all her commitments. On June 2nd Dr. Schacht announced Germany's intention to declare a Moratorium on all short-term and long-term foreign debts; and thereafter he declared a Transfer Moratorium on foreign debts. Slight modifications were effected before the end of the month. All the time he was tightening the control on the exchange dealings and during the middle of the year he established a rigorous hold on passage money transfers. It was at this time that Germany resorted freely to the system of accepting Germany's bonds in foreign markets which were quoted at heavy discounts, in payment at par for exports from Germany. This was a veiled form of currency depreciation and direct barter which led later on to the system of giving preferential treatment in respect of short-term debts in consideration of an increased offtake of German goods. Towards the end of the year Germany entered into commercial treaties with Switzerland and Holland under which the two countries obtained a higher percentage of cash payments in respect of interests on short-term debts than was available to the other creditors of Germany. Dr. Schacht's policy had, during the whole year, caused much heart-burning among the other foreign creditors. And on December 5th a conference was held between Dr. Schacht and the representatives of Germany's foreign creditors; and though the latter did not admit the need for a revision of the terms to the advantage of Germany, Dr. Schacht announced his decision to pay only 30 per cent. of interest in cash instead of 50 per cent. as formerly and the rest in scrips. The end of the year saw spirited protests from both British and American creditors backed by official representations from their respective governments.

THE EAST INDIA
JUTE ASSOCIATION, LIMITED.

All dealings in jute relating to this Exchange should be transacted through Brokers who are members of THE EAST INDIA JUTE ASSOCIATION and contracts in respect thereof should be obtained on the official contract forms prescribed by the Association and are subject to its Articles of Association and the bye-laws made thereunder. The Association or the Tribunal of Arbitration cannot recognise any dealings for which written contracts in the specified form are not passed.

A list of Members can be obtained from the Secretary,
EAST INDIA JUTE ASSOCIATION, 2, ROYAL EXCHANGE PLACE, CALCUTTA
with, if desired, the authorised scale of commission, and a copy of the Bye-laws.

THE PAST YEAR

The best that can be said of 1933 is that the favourable features of 1932 received further emphasis in the same directions and that, judged by most criteria, it was less gloomy than the preceding one.

In considering Indian finance in 1933, due note has to be taken of certain important international developments as well as of happenings in this country.

In the international sphere, America's abandonment of the gold standard and the fluctuating and mystifying dollar excited, as was to be expected, great interest and even concern in India. As the rupee is linked to sterling, the fortunes of sterling in relation to the dollar have a direct bearing on the Indian market. The question that arose in this connection was what the British Government's policy would be as regards the international value of sterling; whether the depreciation of the dollar would be made by deliberate action on the part of the authorities to cause a corresponding depreciation in sterling; or whether the objective will be shifted from dollar to franc. If sterling had been depreciated in consonance with dollar, India hoped for relief as that might have placed the rupee on a lower basis than the currency of the countries with which India had trade relations. Therefore when it was known that sterling was to be pegged in relatin to franc, great concern was felt in this country as to how far the devaluation of the dollar would affect the competing power of Indian commodities like cotton.

There was a period of great suspension on this account. As the American authorities, however, took simultaneous steps to cause a substantial rise in prices, the effect of a depreciating dollar has not been altogether adverse on the foreign trade of countries like India.

Viewing the problem of the dollar in relation to India, it can therefore be said that the end of the year saw the disappearance of apprehensions. On the other hand, great hopes have been raised in this country as a result of the announcement of President Roosevelt's intention to adopt definite measures for the rehabilitation of silver.

The rise in American prices has also induced some measure of rise in certain Indian commodities though most of the gain has been lost and the rise itself was somewhat fitful.

The American development did not receive a favourable press in India. In fact, the unfavourable aspects of the U. S. A. programme have been given more prominence. Nevertheless, as the year drew to a close, a definite conviction has grown in well-informed circles that the American experiment has significance to India; as Professor Keynes has expressed it recently, there are more chances of its success than its failure; and that if success attends Mr. Roosevelt's efforts, India too, should decide on abandoning her present policy of drift and initiate measures calculated to deal with the financial problem on a scientific basis and a well formulated plan.

While America has been pursuing a policy in which the dominant note is the attaching of full value to internal price levels and the relegation of the exchange value of the dollar to the background, India has been following an exactly opposite policy. The stability of the external value of the rupee has continued to engage the prime attention of the authorities. Towards this end, the exchange obligation of the Reserve Bank have been legalised on the basis of 1s. 6d.

Agitation against the conversion of a *de facto* basis against a *de jure* basis so far as 18d. ratio is concerned marked the second half of the year. Faith in the higher ratio is absent in most quarters though conservative British circles would not dare express openly their disbelief in 18d. But it is significant that European exchange industrial centres as Cawnpore, Madras, Madura and Bombay have definitely allied themselves with the Indian demand for a lower ratio.

Even those who have not joined the movement for a reduction in the ratio have not said anything in support of the present ratio but merely argued that no change should be made while existing conditions of unsettlement in world currencies prevail.

The Government on their part have been content to follow the line of least resistence as they have been encouraged in such a policy by the total absence of any difficulties as regards exchange and by the substantial remedies that they have been able to make to the Secretary of State throughout the year.

Even so, in the last quarter of the year, exchange did cause some disquietude, the rupee rate sinking at one time to 1s. 5¾d., and giving rise to fears, on a particular Staturday, that the market might approach the Government with Reverse Councils.

This necessitated counter-measures for the firming up of money conditions. The offers of Treasury Bills were increased from Rs. 1½ crores to Rs. 2½ crores per week. The average rate of discount was pulled up from fourteen annas per cent. to Rs. 2¾ per cent.

These measures, as well as the smooth passing of the Reserve Bank Bill through the Assembly, arrested the rot and the year closed with the rupee rate recording a substantial recovery.

In 1932, the strength of the exchange rested, more or less entirely, on gold exports. The export surplus on merchandise account came in as an additional prop in 1933.

Larger Export Surplus

At the time of writing, the trade figures of only 11 months are available. But they show that the export surplus in merchandise up to the end of November was Rs. 28½ crores as against Rs. 4½ crores in the corresponding period of 1932. The increased surplus has been brought about mostly by reduction in imports and, to a very small extent, by an expansion in exports. In this connection, reference must be made to the effect of the Ottawa Agreement on India's export and import trade and the developments in connection with India's attitude to Japan. His Majesty's Trade Commissioner made, recently, a study of the trade figures for the first half of the fiscal year and he proved that Ottawa preferences coupled with advantages arising from currency depreciation were responsible for the greater headway made by British goods in the Indian market to the detriment of Continental and foreign goods. No such study has so far been made as regards Indo-British trade from the point of view of India. In regard to linseed, however, there has been an amazing expansion in the export trade from this country to England. The following table shows the position in regard to linseed :

Linseed Imports into the U. K. (Tons).

	1933.			1932.		
	Sept.	Oct.	Nov.	Sept.	Oct.	Nov.
From Argentine Republic	1,373	1,900	893	28,451	47,664	19,393
From British India	17,555	20,961	20,445	600	1,700	850

Anti Dumping Bill passed by Assembly

That Japan has been flooding the Indian markets with cheap goods by virtue of the advantage conferred by the heavily depreciated currency is a complaint made not only by the Indian millowners but by numerous miscellaneous industries. This has caused widespread bitterness and the Government found it necessary to get the Anti-Dumping Bill passed by the Legigslature in April. Further legislative measures are under contemplation to deal with Japanese imports. Six months' notice of termination of the Indo-Japanese trade treaty of 1905 was given. This has to take effect from October 10.

Trade Talks between Japan and India

Meantime, however, a government delegation and a business delegation arrived from Japan with a view to undertake negotiations for the concluding of a new treaty if possible. No treaty was concluded in the calendar year. But early in 1934 an announcement was made that the negotiations between India and Japan had resulted in an understanding as regards the various issues that were brought under discussion between the two delegations.

A discussion of the treaty will be beyond the province of this article. But it is necessary to state that there was general complaint in India that the Japanese had been deliberately delaying negotiations. In the reprieve thus secured, Japan had imported considerable quantities of various kinds of manufactured goods. Thus, even if there are to be higher duties than the existing ones, there would be no immediate effect on Japan. By the same token, the Indian industries which are supposed to receive great benefits from the new treaty with Japan can hope for relief only after the goods brought in in the last three months have passed into consumption.

All circumstances taken into consideration, Japan has made the best bargain in the situation. Her treaty is particularly notable in getting recognition for the principle of Favoured Nation treatment.

As soon as the Anti-Dumping Bill was passed, Japan proclaimed a boycott of Indian cotton. Not only was this a threat, but actually she did not buy any cotton from this country in the last four months. This threat and its fulfilment made the negotiations between India and Japan more delicate and more complicated. The treaty that has finally been concluded seeks, therefore, to link up Japan's sales of cotton manufactures in India with her purchases of cotton from India.

Textile Agreement between India and Lancashire

While the Japanese negotiations were going on, a delegation from Lancashire was also present in India and had talks both with official representatives and representatives of the Indian cotton mills. The result of their visit was an understanding between the Bombay Millowners' Association and Lancashire delegation, where the former will not oppose a reduction of the surcharge as against Lancashire, if the Indian budgetary position allowed it and the latter will take effective action to permit of increased use of cotton by Lancashire. Owing to the uncertainty that has prevailed in Indo-Japanese trade, the figures in regard to merchandise imports and exports during 1933 should be considered as having been affected by abnormal factors. If the arrangement with Japan works smoothly, export figures should be helped by increased shipments of cotton and import figures should show a shrinkage owing to the operation of higher duties and owing to the absence of the frenzied imports that were rushed into India during the interval.

It may, therefore be said that while 1932 was one of the most anxious years in the sense that the export surplus on merchandise account was phenomenally low at 4½ crores, considerable improvement has taken place in this behalf during 1933.

Dwindling Gold Shipments

It was fortunate that developments in this regard were favourable as gold shipments have been tending to dwindle. Exports are now on an average basis of Rs. 1½ crores per month. And the position is such that any sudden development can cause a considerable drying up of the gold stream. America going off the gold standard in the first instance and the ratio agitation in the second instance were responsible for the holding up of gold shipments.

While the end of gold exports is not in sight, signs are not wanting to indicate that the available volume of gold in the mofussil for export purposes is considerably going down. Since going off the gold standard, India has exported gold worth Rs. 160 crores.

Large Sterling Resources

Thanks to better export surplus on merchandise account, continued gold shipments and absence of flight of capital, the Government were able to buy sterling in the open market to the extent of £27 million at rates higher than 1s. 6 1/16d. The Secretary of State has been further reimbursed to the extent of £22 million from two sterling loans. The first sterling loan was on 4 per cent. basis and the last one on a 3½ per cent basis.

The sterling resources with the India Office were sufficiently large to allow of the repayment of two serling loans amounting to £16 million. The year will, therefore, end with the Home Treasury balance having a cash position appreciably stronger than was planned in the budget estimates. As the first quarter of the calendar year, which is the last quarter of the fiscal year, is a good time of the year for remittances, it may be safely stated that the new financial year will open with such a balance in the Home Treasury as would be sufficient for the ordinary requirments of the Secretary of State for a period of anything like six months. It is an extremely favourable feature in the Indian exchange situation. A strong cash position of the India Office has also important effects on the India sterling securities.

Healthy Giltedge Market

In fact, as in the earlier year, it is the strong market for India sterling stocks that played an important part in bringing about a healthier level of prices in rupee giltedge securities. At one stage, further emphasis in this direction was lent by the success that attended the rupee loan floated early in 1933.

In 1932, and, to some extent, in the earlier year, India sterling securities were at correspondingly higher than rupee securities. Taking the identical issues 3½ per cent. sterling paper and 3½ per cent. India Paper, the former used to be on an average 8 to 10 points higher than the latter. But so important was the bullish influence exerted by the success of the 4 per cent. 1933 loan issued in January 1933 that rupee government securities took a sudden plunge forward, the gap between 3½ per cent. India sterling paper and 3½ per cent. rupee paper narrowing more and more till a stage was actually reached when 3½ per cent. rupee paper was quoting higher than the 3½ per cent. sterling paper.

New Rupee Loans

Three rupee loans in all were issued in 1933. The first loan which was a 4 per cent. 1943 issue issued at 98 per cent. was on an yield basis of 4.238 per cent. per annum. Subscriptions were payable in the form of cash or Indian Treasury Bills maturing not later than the 11th February 1933. The loan was for an amount of Rs. 15 crores and the lists were opend for subscription on the 23rd January, 1933. The lists remained open actually for less than two hours and applications accompanied by tender of cash only which amounted to Rs. 9¾ crores were rejected as the loan was practically fully subscribed in the form of Treasury Bills. The total nominal value of the loan applied for was Rs. 24,76,59,700 of which Rs. 9,79,42,000 was by tender of cash and Rs. 14,97,17,700 by tender of Treasury Bills. Applications by tender of cash were rejected, while those by tender of Treasury Bills were accepted in full. The total nominal value of the loan issued came to Rs. 14,97,17,700. The nominal value of the Treasury Bills tendered and accepted was Rs. 14,67,25,000, Rs. 1,654 having been refunded to the applicants.

The second was a 4 per cent. 1960-70 conversion issue. No subscriptions in cash were invited or accepted. Holders of 5 per cent. 1933 Bonds, 5 per cent. War Loan 1929-47 and 6 per cent. Bonds 1933-36 were given the option to convert. The terms of conversion were as follows: For every Rs. 100 (nominal value)of any of the above three loans tendered applicants received (1) Rs. 100 of the 4 per cent. Loan 1960-70, bearing interest from the 15th March 1933 ; (2) the interest accrued and accruing up to the 14th March 1933, at the existing rates, on the securities converted and in addition (3) a cash bonus of Rs.7-8 in the case of the 5 per cent. War Loan 1929-47 and of Rs. 8-8 in the case of each of the other two loans. On the cash bonus basis the yield of the new conversion loan was 4.44 per cent. per annum approximately if repaid in 1970 and 4.51 if repaid in 1960. The conversion offer remained open from the 1st February to the 28th February 1933. The Conversion loan was announced on the day following the opening and closing of the 4 per cent. cash loan, 1943 for Rs. 15 crores. The results were extremely satisfactory. On the 5 per cent. no less than Rs. 26,72,02,600 were converted in addition to Rs. 7,08,53,100 of the 5 per cent. Bonds 1933.

The resulting position was as under:

	Outstanding on 31st Jan. 1933.	Amount Converted.	Balance Outstanding on 1st Mar. 1933.
5 per cent. Bonds, 1933	11,38,43,200	7,08,53,100	4,29,90,100
5 per cent. War Loan, 1929-47 ...	19,62,44,650	15,49,82,600	4,12,62,050
6 per cent. Bonds, 1933-36 ...	20,18,67,700	11,22,20,000	8,96,47,700
Total ...	51,19,55,550	33,80,55,700	17,38,99,850

The third loan was a 3½ per cent. 1947-50. It consisted of two sections, namely, cash and conversion. Subscriptions to the cash section were payable in the form of (*a*) securities of the 4 per cent. Conversion Loan of 1916-17 which were accepted at par, (*b*) cash (*c*) treasury bills maturing not later than the 10th May 1933, acceptable at their face value, (*d*) securities of the 5 per cent. War Loan, 1929-47, acceptable at par, and (*e*) securities of the 5 per cent. Bonds 1933 and the 6 per cent. Bonds 1933-36 acceptable at a premium of annas 12 per cent., the issue price of the new loan being reckoned at Rs. 96 per cent. For the conversion section, subscriptions were in the form of securities of (*a*) the 4½ per cent. Bonds, 1934, (*b*) the 5 per cent. Bonds, 1935, and (*c*) the 6½ per cent. Treasury Bonds, 1935, the terms offered for conversion being as follows: For Rs. 100 of any of the above three loans tendered, the applicants received—(*a*) Rs. 100 (nominal value) of the 3½ per cent. Loan 1947-50, bearing interest from the 15th May 1933, (*b*) the interest accrued and accruing up to the 14th May 1933 at the existing rates, on the securities converted and in addition, (*c*) a cash bonus of Rs. 6-2-0, Rs. 8 and Rs. 11-8-0 in the case of the 4½ per cent. Bonds, 1934, the 5 per cent. Bonds, 1935 and the 6½ per cent. Treasury Bonds, 1935, respectively. The loan was on an yield basis of 3.81 per cent. per annum if the loan is repaid in 1950 and 3.86 if repaid in 1947. As regards the conversion section allowing for the cash bonuses paid on conversion as discount,, the yield may be reckoned as 4.03 or 4.1 per cent. per annum according as 1950 or 1947 was taken as the redemption date. The loan opened for subscription on the 28th April 1933. The Loan was attended with remarkable success. It was quoted at a premium even before the lists opened, and the cash section of the loan had to be closed in less than a couple of hours. The results were quite satisfactory. The total nominal value of new loan issued for the cash section was Rs. 15,59,98,700 of which Rs. 5,53,30,300 was against the tender of the 4 per cent. Conversion Loan of 1916-17 and Rs. 10,06,69,400 against the tender of cash. The amount of cash actually reived was Rs. 9,66,41,664. In the conversion section the result of the operation was as follows:

	Amounts outstanding before the issue of this loan	Amounts converted into the loan	Balance outstanding after the closue
4½ per cent. Bonds, 1934 ...	25,98,05,600	12,97,54,800	13,00,50,80
5 per cent. Bonds, 1935 ...	12,83,14,900	1,39,75,200	11,43,39,700
6½ per cent. Treasury Bonds, 1935 ...	16,94,65,600	84,45,800	16,10,19,800
Total ...	55,75,85,100	15,21,75,800	40,54,10,300

CALCUTTA STOCK EXCHANGE

The conditions in the Exchange market during 1933 were quite different than those ruling during the previous year. Of all the markets the Stock Exchange, on the whole, was more buoyant and lively throughout the year. The commodities like jute, cotton, shellac, wheat and coal did touch once again in 1933 the low price levels of 1932. But the stock market either for Government securities or for Industrial shares maintained a higher level than that of 1932. Prices in 1933 never touched the lowest points of 1932. The rise during the current year was neither spasmodic nor sentimental, but was more orderly and realistic. More confidence was noticeable in genuine investors and funds were freely coming in for investment both in scrips as well as commodities. Speculators were once again more hopeful and bulls who were severely hit for the last three or four years were looking very much encouraged. In spite of heavy losses during the previous years their confidence was reviving, their tone was more cheerful and their operations were wider with an unshaken faith. The general idea towards the close of the year was that the worst had been seen and that things were sure to take a change for the better. The closing of the year was more hopeful than the opening and faith was still deeper that 1934 would see conditions much better than those which ruled in 1933.

Government Securities

The recovery in this section which took place during the latter half of 1932, following the reduction in the borrowing rate was well-maintained. The 3½ per cent. paper improved from the lowest levels of Rs. 54 to Rs. 74 towards the close of 1932. The easy money conditions in the market gave the Government of India the opportunity to reduce, by successive stages, the borrowing rates both on regular as well as Treasury Bills. In September 1931 the Government paid as high a rate as 6½ per cent. for a short-dated loan while in April 1933 they could successfully float a 3½ per cent. loan, a loan not so short-dated as that of 1931 but fairly medium dated repayable in 1947-50. The reduction in the borrowing rate was as below:

June, 1932	...	98	5½ per cent.
August, 1932	...	98	5 ,,
January, 1933	...	98	4 ,,
February, 1933	...	93	4 ,,
April, 1933	...	96	3½ ,,

With the floatation of the last named loan the 3½ per cent. paper immediately soared up and during May touched Rs. 89. But immediately on the heels of the 3½ per cent. Rupee loan in India, a 4 per cent. sterling loan was issued in London, which caused a great panic amongst the Indian paper holders. The 3½ per cent. 1947-50 loan was very much oversubscribed and was quoted at a small premium even before the issue was open. But this shock made the holders nervous and a headlong plunge took place with the result that in a very short space of time values came down to below Rs. 80. The sharp decline had a national reaction and an improvement of a couple of rupees was noticeable. Since then there has been no sensational developments in this section and for the rest of the year the market has ruled within a range of two or three rupees. The closing tone was better and more confident.

The following were the opening and closing prices of the year 1933 for some of the important scrips on the market.

		Opening Rs.	Closing Rs.
3½ per cent.	...	75	81 13
4 per cent. 1960-70	...	86	98 8
4 per cent. 1934-37	...	98⅜	100 10
5 per cent. 1940-43	...	102¼	106 0
5 per cent. 1955-60	...	95¾	105 8
6¼ per cent. 1935	...	105⅝	105 6

It must however be mentioned that the decrease in the borrowing rate was not due to any real improvement in the Government's budgetary position but was purely due to easy monetary conditions all over the world. The lack of facilities for investment in industrial enterprise, and the fall in the value of commodities made money cheap and plentiful. The easiness in the Indian money market was still more pronounced due to the release of very large sums of money from the sales of gold which could not be advantageously invested elsewhere. Whatever be the cause, the improvement in Government paper was of much advantage to the Banks and Insurance Companies who always invest large sums of money in Government securities.

Jute

Early in the year the unsatisfactory conditions of American banking had a weakening effect on the hessian market and the same in return was reflected in the weaker jute shares. These conditions, however, did not remain for a long time. By the arrival of summer, hessians took an upward trend. Mills continued to work 40 hours a week with 15 per cent. of hessian looms closed. Stocks of hessian in Calcutta were reduced month after month and all these factors had a very healthy and stimulating effect on jute shares. The announcement of a process tax on jute fibres in U. S. A. did create some disturbance, but the effect was not lasting and the tone of the market was, on the whole, very cheerful for the better part of the year.

The following were the opening, highest and closing prices of jute shares during the year 1933:

		Opening. Rs.	Highest. Rs.	Closing. Rs.
Howrahs	...	358	53	50
Kamarhatty	...	360	525	520
Anglo-Indias	...	238	374	340
Bally ...	...	105	150	135
Auckland	...	133	185	178
Belvedere	...	265	330	325
Cheviot	...	160	220	216
Clives	...	20	28	26
National	...	18	24	21
Reliance	...	215	321	320
Fort Gloster	...	390	475	472
Fort William	...	190	245	240
Gourepore	...	228	360	355
Gondalpara	...	625	750	740
Hooghly	...	54	59	58
Hukumchand	...	14	16	12
Kanknarrah	...	340	450	440
Kelvins	...	460	520	510
Northbrook	...	40	45	44

Coals

For the major part of 1933 this section was more or less lifeless. Business in coal was few and far between. But those who were shrewd and who would go in for the cheapest in the market had an eye on coals and whenever opportunity occurred they were not slow to seize it. To their pleasant surprise a revival in the latter part of the year did take place, following the rumours of a coal restriction scheme. The improvement was not insignificant and naturally the demand for them was not slow. The following table shows the important changes that took place during the year:

	Opening. Rs.	Closing. Rs.
Amalgamateds ...	12 0	15 0
Bengal	201 0	251 0
Bengal-Nagpur ...	32 0	42 0
Rangur	6 0	8 0
Borrea	9 0	12 8
Equitable ...	14 0	22 0
Burrakur ...	9 0	15 0
New Manbhoom ...	10 0	20 0
Pench Valley ...	26 0	37 0
Raneegunge ...	27 0	44 0
Rewa	5 8	13 0
Standard	20 0	31 0
South Karanpura ...	1 12	5 0

Tea

Following the restriction on the export, agreed upon by the various tea interested countries, and the same made effective during the current year, there was a good demand for tea and tea shares. Prices of tea had risen very considerably over the previous year. The London stock exchange began to show improvement in this section much earlier than the Calcutta exchange. The latter was, however, not slow to follow. Even then the improvement in the local exchange was far below when compared with the rise that took place in London. The following will, however, show the opening and closing prices of the important tea scrips in 1933:

	Opening.	Closing.
Central Cachar ...	38	90
Bishnauth ...	15	26
Hantaparas ...	210	500
Jutlibaris ...	10	17
Rajbati ...	20	42
Teesta Valley ...	20	37
Banarhat ...	250	365
Baradighi ...	26	52
Naga Hills ...	8	18
Moheema ...	9	15
Ledo	100	200

Cotton

This section, due to Japanese competition in piecegoods and the protracted Indo-Japanese negotiations, had ruled very dull throughout 1933 and the changes in price as well as in the turnover of business were very few. The only event of importance was the agreement between Mr. Mody and the representatives from Lancashire to the reduction of the 5 per cent. duty on British goods.

Sugar

Sugar shares for the major part of 1933 attracted the attention of the investors as well as the speculators. Prices throughout ruled firm and steady and the turnover of business was fairly large. But due to the increasing number of sugar mills in India and also due to profit taking after a sensational rise in 1932, the high levels could not be maintained and values towards the close were easier as compared with the opening quotations of the year. Considering the various difficulties in the way of some of the sugar mills and the existing premium on shares the present levels may prove higher in some cases and the following year may show the same weakness that was the feature of 1933. The following were the opening and closing quotations for some of the important shares:

	Rs.	A.	Rs.	A.
Carew & Co. ...	15	0	15	0
Cawnpore ...	33	0	31	0
Champaran ...	23	8	22	0
New Savan ...	15	0	12	0
Ryam ...	41	0	33	0
Bharat ...	10	8	8	0
Samastipur ...	12	0	10	0

Miscellaneous

During 1933 in this section Electric shares have been in great demand and some of the best scrips were not always available at market price. Flour shares had a difficult year but ruled easy throughout, with less buyers in evidence. Engineering shares, however, were brisk and there was a net gain in values over the previous year. Paper shares were also in good demand and showed some improvement. The following table shows the opening and closing prices of some of the important scrips:

	Opening		Closing	
	Rs.	A.	Rs.	A.
Agra Electric ...	77	0	100	0
Bareilly Electric ...	8	8	11	4
Benares Electric ...	10	4	12	4
Patna Electric ...	12	4	14	8
Upper Jumna Electric ...	7	4	8	4
Dacca Electric ...	12	4	17	0
Jubbulpore Electric ...	9	4	10	8
Indian Standard Wagon ...	40	0	43	8
Indian Wood Product ...	24	0	28	0
Titaghur Paper ...	12	8	15	8
Bengal Paper ...	68	0	70	0

BOMBAY STOCK EXCHANGE IN 1933

Most of the sections in the Bombay Stock Exchange market, recorded a substantial advance towards the close of the year 1933, despite the unfortunate Currimbhoy contretemps in September. The movement would have been much more outstanding and bright but for that catastrophe. It not only shook the confidence of the investing public, but also meant the disappearance of a large amount which was in circulation on the Exchange. It also caused a serious setback in business. The section to be severely hit was the textile, although the large Power shares were also seriously suffering. The latter setback was further accentuated by the closures of a number of mills and short time working in others.

BANKS

The condition of the banks in the year was better. The principal scrip in this group viewed from all points was the Imperial Bank of India. Fluctuations in this instance were influenced by fears about the position of the Bank when the Reserve Bank comes to exist, but these having been allayed, the year closed with the quotation at Rs. 1,240 for the fully paids and Rs. 310 for the Contributories as against Rs. 1,220 and Rs. 302½ respectively.

There was considerable improvement in the case of the Bank of India. After opening at Rs. 94 at one time the rate touched Rs. 107-4 and showed a tendency to rise. But, there was a setback with the final price at Rs. 102.

There were wide fluctuations in Bank of Barodas. It was quite unfortunate that though they advanced from Rs. 75 to Rs. 101-4 various rumours pushed the rate back to Rs. 82-4. Central Banks fared well. It was 25 per cent. better towards the close of the year than in beginning. The quotation at Rs. 23-12 marked an advance of Rs. 4-12.

The small priced Union Bank of India, was the best share in the whole group and it was able to record an improvement of about Re. 1 at Rs. 4-10 or practically 36 per cent.

The following table can give a better idea of the changed aspect of this class of investment.

		1932 Jan.			1933. Dec.		
		Rs.	A.	P.	Rs.	A.	P.
Imperial Bank	...	860	0	0	1,240	0	0
Bank of India	...	72	4	0	102	0	0
Central Banks	...	63	0	0	82	4	0
Union Banks	...	3	2	0	4	10	0

TEXTILES

Severe Japanese competition in piecegoods led to the imposition of further duties, but even these did not improve the prospects of the trade. On the other hand, this section ruled very dull throughout 1933, and there was little change in price as well as in turnover.

The month of September saw the occurrence of one of the most severe crisis that the Bombay Stock Exchange has had to experience. Bull operations had, for some months sustained rates. When rumours were first afloat about the shakiness of the old and popular firm of Currimbhoy Ebrahim & sons, many did not believe them. But, when more light was thrown on the position, a bout of selling set in the like of which had not been seen for a long time. All forward business was suspended and was actually in that state for two settlements. Transactions were adjusted and settled after a good deal of negotiations and trouble. The shareholders in the various concerns were affected very severely. It came as a great blow to the business circles and their activities. It will take a long time for the Bombay market to recover from this great catastrophe. How far this calamity has affected the shareholders in the various concerns can be seen from the following table of opening and closing prices:

		Jan. 1, 1933			Dec. 31, 1933		
		Rs.	A.	P.	Rs.	A.	P.
Crescents	...	34	0	0	7	4	0
Ebrahim Pabaney	...	65	0	0	6	0	0
Fazulbhoys	...	248	12	0	22	8	0
Indian Bleaching	...	145	0	0	144	6	0
Kasturchand	...	5	12	0	2	5	0
Pearls ...	...	117	0	0	6	0	0

LIGHT RAILWAYS

The lower yields on giltedge securities naturally turned the attention of "safety first" investors to a more remunerative source of income. The outcome has been a good rise in light railway shares.

The following table will clearly show the present position of the shares of the respective companies compared with their earlier position.

		Dec. 1933			Jan. 1933		
		Rs.	A.	P.	Rs.	A.	P.
Ahmedabad	...	795	0	0	645	0	0
Amritsar Patti	...	113	0	0	96	0	0

Upper Sing Light	...	95	8	0	72	0	0

HYDRO-ELECTRICS

This section which gave once, some hopes, saw a substantial falling away in quotations in the last three months; and this caused a great disappointment to all. Tata Hydros, after opening at Rs. 139-6 gradually appreciated to Rs. 165 to close at the same price as the opening. Andhra Valleys, the next on the list, showed a bright rise from Rs. 1,256-4 to Rs. 1,480 but a fall set in and brought the rate down to Rs. 1,315 towards the end of the year. Tata Powers came up to the expectation and rose to as high as Rs. 1,050 from Rs. 783-12. But they were affected adversely and brought down again to Rs. 887-8.

CEMENT

This section had the best experience of the year. Prices in every instance showed an appreciable rise. Bundis started off in January at Rs. 15-12 and thereafter made steady improvement to the region of Rs. 27. The stoppage of forward dealings in September put an end to the rise. In spite of that they were able to close at Rs. 25. Gwaliors rose up from Rs. 48-8 to Rs. 80-8 and Indians from Rs. 189-6 to Rs. 275. Punjab ordinaries shared in the general improvement from Rs. 9-13, they at one time touched a high level of Rs. 16-8 with the final figure of Rs. 14-4. Here it is satisfactory to see in these cases, the quotations have doubled themselves.

MISCELLANEOUS

This section had withstood the year with an excellent progress, despite the fact that in many cases, the closing rates were lower than the highest touched. To start with Alock Ashdown, we find on balance the final quotation to be better at Rs. 156-4 against Rs. 141-4. Bombay after opening at Rs. 367-8 soared well into the heights to close subsequently at Rs. 387-8. Belapur sugars opened at Rs. 146-4 but at one time got over Rs. 200. A fall was then set in to Rs. 161-4. Both New India and Jupiter insurance moved up well. The former advanced to Rs. 23-14 and the latter from Rs. 9-8 to Rs. 11-6. Taking up Tata Steel the rise in both the ordinaries and second Pref. has been well merited and it is satisfying to find the former at Rs. 49-4 against Rs. 35-8 and the latter Rs. 110-8 against Rs. 68-4.

SUGAR

From the market's point of view, the most dull and featurless commodity in the Indian markets during 1933 was sugar. The fluctuations in prices were confined to a range of annas 8 per maund throughout the year, the highest and lowest being about Rs. 10-8 and Rs. 10 for Java white and a slightly lower price for Indian sugar. As compared to Calcutta, there was more sensation in the Bombay market, the latter still being served from Java. Further reductions to F 4.55 and F 4.75 for East Coast and West Coast Indian ports respectively were made by Nivas in Java but the same had very little effect on capturing the Indian market because a corresponding and in some cases even mere reduction was made in the values of Indian sugar, due to internal competition. Lower freight rates for Indian and Eastern markets were made available for Java, but due to Java guilder remaining on gold, the exchange always remained against her and the small reduction in freight or quotations could not improve her trade to any considerable extent.

Stocks in Indian ports are comparatively very low and year after year they are decreasing.

The stocks of foreign sugar in the main Indian ports towards the close of the years, 1931, 1932 and 1933 were estimated as follows:

(in tons)

		1931	1932	1933
Calcutta	...	11,400	1,540	3,061
Bombay	...	11,000	5,850	4,500
Karachi	...	21,400	6,600	2,500
Madras	...	1,500	40	1,700
Rangoon	...	824	1,524	336

The following were the highest and lowest price of sugar during the year:

		Java White		Cawnpore	
		Highest	Lowest	Highest	Lowest
January	...	10 12 6	10 8 3	10 7 0	10 6 0
February	...	10 7 0	10 5 3	10 3 0	10 1 6
March	...	10 7 0	10 4 6	10 0 0	9 14 0
April	...	10 5 6	10 3 0	10 0 0	9 14 0
May	...	10 5 3	10 2 9	10 3 0	10 0 0

July	...	10 7 6	10 6 3	10 6 0	10 3 6
August	...	10 9 0	10 7 6	10 6 0	10 5 6
September	...	10 8 6	10 8 0	10 6 0	10 5 6
October	...	10 8 0	10 7 6	10 2 0	—
November	...	10 9 6	10 7 6	10 2 0	10 1 0
December	...	10 8 0	10 4 0	10 1 0	9 14 0

1933-34 CROP

According to the second sugarcane crop forecast published towards the end of October 1933 the area under sugarcane was estimated at 3.34 million acres or an increase of 12 per cent. over the previous year at that time. Weather conditions had been favourable except in the most important cane growing tract, namely, the United Provinces, where the crop had suffered, from excessive rains and floods. The condition of the crop otherwise was reported to be good.

The percentage of U. P. on total cultivation was 51.8 that of Punjab 14.6, Behar and Orissa 9.9, Bengal 7.2, Madras 3.6, Bombay 3.3, North-west Frontier Province 1.6, Assam 1.2, Central Provinces and Berar 0.8 per cent. respectively.

The rainfall in U. P. was very unevenly distributed and the crop is reported to have suffered from excessive rains and floods in the months of August to September. The probable outturn for the province as a whole was estimated at 7.3 per cent. of the normal. The condition in the Punjab was quite different. The rainfall in July, August and September proved beneficial to the standing crop except in low-lying areas of some districts. The figure for the crop was estimated at 72 per cent. as against a ten years' average of 89 per cent.

In Bihar and Orissa the area of plantation has been increased by about 43 per cent. over that of the last year. This increase is due partly to favourable weather, and partly to the opening of several sugar factories in North and South Bihar. Weather conditions have been favourable, the season on the whole has been satisfactory. The condition figure for the crop is estimated at 84 per cent. as against a ten years' average of 82.4 per cent.

There is an increase in area in Bengal as well. The weather was generally favourable both for planting and germination. The season was on the whole, satisfactory for the crop.

But in Madras the condition was otherwise. There has been a decrease of 3 per cent. in the area of plantation compared with that of the previous year, which is attributed to low prices of jaggery. The condition of the crop on the whole was satisfactory except in South Arcot where it was reported to have suffered from stem-borer to some extent.

The sugar season in India commences from November 1. The total estimated area under sugarcane during the season 1932-33 was 3.30 million acres as against 2.97 million acres during the previous season. The total yield of the raw sugar was estimated at 4.65 million tons, the highest on record as compared with 3.97 million during the previous season.

The detailed figures for provinces and states were as follows:

		Area (1,000 acres.)		Yield (1,000 tons.)		Yield per acre (lbs)	
		1932-33	1931-32	1932-33	1931-32	1932-33	1931-32
United Provinces (*a*)	...	1,789	1,593	2,602	2,225	3,258	3,129
Punjab	...	556	475	415	368	1,672	1,735

WHITE SUGAR

By W. J. ALCOCK, M. I. Chem. E., A. I. Mech. E., F. Inst. F.

Perhaps it would be as well to review shortly and in non-technical terms exactly what "WHITE SUGAR" means or conveys. It is possible that in other countries it has a more defined sense than up to the present in India, for the reason that on the Continent, the United Kingdom and the U.S.A. practically all the White Sugar, exclusive of Beet, is produced from Imported Raws, that is sugar polarising round 97-98.5. This Raw Sugar is refined in Central Refineries and reaches the consumer as a White Sugar.

India imported during the years 1913-32 an average yearly tonnage of 783,000 tons of Sugar, of which 670,000 tons or 85 per cent. of the total was imported from Java. The greater portion had a Dutch standard of 23 which is a white crystalline sugar. The Indian consumer is, therefore, used to a standard of quality.

Conditions to-day are greatly changed, it is estimated that during the season 1933-34 the Mills will produce 332,000 tons of Sugar or practically 42 per cent. of the average annual imports of White Sugar for the years 1913-32. To this production must be added 300,000 tons of Khandsari Sugar making a total of 632,000 tons, say 81 per cent. of the average annual twenty years' Imports.

The production of *gur* must be taken into account also. As already indicated, in the technical press a balance between production and consumption has arrived and prices are falling. Reasons given are want of godown space at the mills, want of required capital to carry over stock and another reason may be lower quality of sugar produced in comparison to the imported product. If during a period of years the consumer uses a product that is of a high quality when he is offered in place thereof a lower grade he will either refuse to buy or demand a reduction in price. At present the consumer is content to demand the latter but it is reasonable to assume that when the economic depression lifts and consumer is better off he is quite likely to demand the quality of sugar he formerly received.

It may be asked, how is it that Java has been able to produce a straight white sugar without refining? It may be answered that Java has a slightly higher purity of cane juices over those in the two great producing provinces of India, that is Bihar and Orissa and the United Provinces. But analysis show that in the province of Bengal and in certain parts of Southern India canes are grown yielding a sucrose and juice of equal purity to cane grown in Java.

In Java the processes of manufacture are Double Carbonatation and Double Sulphitation coupled to double curing of the sugars, an accurate technical control of the process is exercised by trained and competent chemists, and thus Java produces direct a white sugar which for many years held the Indian market.

The processes employed by the Indian Mills are Single and Double Sulphitation in the majority, a few Double Carbonatation, some mille double cure but with the exception of the No. 1 Sugars produced by the Double Carbonatation Plants, the sugars cannot be said to equal Java Sugar either in colour or grain. Neither have the mills in most cases sufficient competent technical control.

White sugar is well worth the industry's deep consideration. The difference in quality to Java Sugar means to a mill crushing 16,00,000 maunds of cane in a season and yielding 8.75 per cent. by weight of sugar into bags on weight of cane crushed with an average yield of qualities as :—

No. 1 Sugar	77,000 maunds.
No. 2 Sugar	63,000 maunds.
Total Produced ...	1,40,000 maunds.

Realizing :—

	Rs.
77,000 Maunds @ Rs. 9/- at Mill ...	6,93,000
63,000 Maunds @ Rs. 7/8 at Mill ...	4,72,000
Total Value of Sugar ...	11,65,000

	Rs.
To-day Java Sugar at Port of Entry may be taken round Rs. 10 per maund which on 1,40,000 maunds of Sugar	14,00,000
The same weight of Indian Sugar realizes	11,65,000
Total ...	2,35,000*

This large sales difference can be reduced and reduced and readily by the adoption of the Double Carbonatation Process with double curing of the sugars which will produce direst 60 per cent. of the mills output equal to Java White. It has been claimed that the Double Carbonatation Process is more costly to work, this is not actually correct, as there is a higher recovery of sugar in the boiling house that is 0.25 per cent. by weight, and this counterbalances any higher cost of production.

And it yields a white sugar that secures 6/8 annas per maund over sugar made by the Sulphitation Process.

The conversion of the No. 2 Sugar into a No. 1 is the same in either Double Carbonatation or Double Sulphitation Factories. It can be carried out either during tht season which would entail considerable additions to the boiling house or after crushing which requires only a moderate outlay of capital. The method is by the use of vegetable carbons and makers are prepared to give a certificate of guarantee that the carbon does not contain any animal matter. It is estimated that for the necessary plant to be installed in a mill which wishes to handle about 600 maunds of second sugar in the off season a capital outlay of round Rs. 35,000 would be involved.

The cost of Producing one maund of refined sugar or sugar equal to Java White would be :—

Vegetable Carbon	3.00	annas.
Fuel 30% on weight of Sugar ...	2.13	,,
Labour and Supervision ...	3.00	,,
Repairs	0.25	,,
Depreciation	0.40	,,
7% loss of Sugar as Molasses ...	7.84	,,
Total ...	16.84	annas per maund of sugar.

If a Mill of the capacity indicated produces its No. 1 Sugar by the Double Carbonatation Process and

---

*Not including any extra cost of production.
or on a Rs. 14/- lac capital 16½ per cent.

treats 63,000 maunds at 16.62 annas per maund at a cost of Rs. 65,441 it should earn taking the sugar produced to be at Java price Rs. 10 per maund on 1,40,000 maunds=Rs. 14,01,000 White sugar, therefore, means to a factory crushing 16,00,000 maunds of cane in a season.

	Rs.
Earnings on White Sugar Manufacture	14,00,000
Less Cost of converting No. 2 ...	65,000
	13,35,000
Earnings on Indian Sugar Manufacture ...	11,65,000
An addition profit of	1,70,000

The Mill would also be in a better position to readily market its product and what is more its sugar would keep colour over the monsoon.

It may be argued that the figurts put forward are too optimistic but on an equal quality there is no reason why the Indian Sugar Manufacturer should not receive the same price for his sugar as Imported.

I make a strong plea to the manufacturer to encourage by all means in his power his Chemical and Engineering staff so that they may receive adequate and reliable training, to pay a fair salary to enable them to pursue their studies in the off season to the benefit of the industry and with fair weight to the ryot we would have strength in sweetness.

SUGAR INDUSTRY

From the industrial point of view the sugar industry in India has made a rapid progress in the season 1932-33 as compared with the previous seasons. The following table will clearly show the progress made in India ,the number of factories operating in 1932-33 being almost double of those in 1931-32 :

Number of Cane factories operating Season

	1932-33	1931-32	1930-31
U.P. ...	33	14	12
Bihar & Orissa ...	19	12	12
Punjab ...	1	1	1
Madras ...	2	2	2
Bombay ...	1	2	1
Burma ...	1	1	1
Total ...	57	32	29

New factories are expected to work during the season 1933-34, out of which three or four factories will be in Bengal which hitherto had no sugar factories at all.

The production of sugar direct from cane in India totalled 290 thousand tons during the season 1932-33 as against 158 thousand tons during 1931-32.

The total production of sugar in India from all sources according to Willet and Grays is estimated at 4,651 thousand tons during 1931-32 against 3,970 thousand tons in 1931-32 and 3,218 thousand tons in 1930-31. According to the same authority the total world production of sugar was :

Million tons

	1932-33	1931-32	1930-31
Cane sugar ...	16.44	17.77	17.15
Beet sugar ...	7.81	8.50	11.32
Total ...	24.25	26.27	28.47

Java Stocks

Stocks of sugar in Java are gradually declining; and the present stock is estimated at about 2.5 million tons. The crop in 1933 is estimated at about half a million tons only as against 1.38 million tons in 1932. During the 1934-35 season a further reduction of 300 thousand tons is contemplated with a view to eliminate the entire existing stock by April 1936. This factor, coupled with the continuation of increased import duty on sugar, is decidedly a very healthy factor for Indian sugar industry. From the market's stand point any sensational rise in values is hard to imagine; because of the internal competition which will naturally counteract the rise that may take place due to reduced selling pressure from Java. It must, however, be borne in mind that the Western and Southern markets cannot be served by Indian mills with the same advantage as they are done from Java. Consequently, they will be very much affected by Java prices, rather than by Indian prices, unless new factories start working and serving these territories. Thus after some time whether Java prices will once again determine the trend of Indian sugar prices or vice versa, it is difficult to say at the moment, but those interested in the trade must keep this fact always in mind.

JUTE

The opening tendency of the Jute market during 1933 was rather easy, when Ready Firsts were quoted at about Rs. 271 per bale. The weakness was due to the general depression in trade and the lack of balance between demand and supply which became more and more pronounced; and by the end of April the price of Ready Firsts went down to Rs. 23. The hopes entertained about World Economic Conference in London in June last had a salutary effect on the market. Jute began to rise and towards the end of May, was quoted at Rs. 37 per bale or almost the highest for the season. The break up of the Conference administered a very sharp and quick setback. Prices began to tumble down and almost touched the low level of Rs. 24 by the end of October.

The weakness was further accentuated by the heavier arrivals of jute; at the same time, it was found that the forecasts prepared by the Government had erred on the side of under-estimated and that instead of 58 lakhs bales quoted, the yield is somewhere over 70 lakhs bales.

At the same time, the prospects of the crop for the season 1933-34 were satisfactory—the estimated yield according to private estimates being nearly 85 lakhs bales. The mills in India continued to work shorter hours and had, therefore, reduced requirements of raw jute. This coupled with the continuous low price of jute for three years provided but little incentive to them to carry extra stocks of raw jute. This factor in turn had serious repercussions on the market and had naturally a weakening effect on the price of jute. The purchases of raw jute by mills outside India have been much larger during 1933 as compared with the previous year. But this has been more so in the latter half of the year than the former. This has been a supporting factor to the market and its effect is being felt only towards the close of the year. Japan has made larger purchases of jute than what she usually used to do.

The preliminary jute forecast for 1933 was published on July 13, and the final on September 7. The estimated area under jute was 2.49 acres and production 7.93 million bales of 400 lbs. each against 2.14 million acres and 7.09 million bales in 1932.

The cultivation of production by province:

Province	Area in acres		Yield in bales of (400 lbs.)	
	Last year	This year	Last year	This year
Bengal (including Cooch Behar & Tripura State)	1,845,700	2,168,700	6,213,500	7,092,100
Behar & Orissa	170,000	192,100	543,500*	473,200*
Assam ...	127,400	130,200	310,100	367,900
Total ...	2,143,100	2,491,000	7,097,100	7,933,200

*Includes Nepal.

The condition of the crop in Bengal which represents some 86.3 per cent. of the total area under jute in British India was good. At the outset the weather was favourable for sowing in East and North Bengal. Wet weather in the end of May and in the early part of June made weeding somewhat difficult in some lowland tracts. In West Bengal the weather was favourable. In March and early April there was drought, and sowings were delayed. Rainfall in February facilitated preparatory village and early sowing in certain lowland tracts of East Bengal.

In Bihar and Orissa representing 7.3 per cent. of the total jute area in British India, the condition of the crop was fair on the whole. In March light rain fell in the Santal Parganas, Cuttack, Balasore and in parts of all the jute growing districts except Darbhanga where there was no rain. The fall was below normal everywhere. In April, light to moderate rain fell in all the jute districts. The fall was above normal everywhere except Cuttack. In May rain fell in all the jute districts. In the later months the weather was favourable in the important districts of Purnea and also in other districts.

In Assam which represents 5.2 per cent. of the total jute in British India, the weather was generally favourable for the cultivation and growth of the crop. Some damage by hailstorms and insects in Goalpara and by insects in Samang and Nowgong districts were reported.

JUTE FUTURES

The Committee under the auspices of the Bengal Chamber of Commerce formed towards the close of 1932 for considering the various aspects of jute futures market completed its task early this year. Mr. N. R. Sarker was the Chairman of the Committee. It was more or less unanimously decided that a futures market for jute is absolutely essential. Certain changes in the formation of the Board of Directors of the East India Jute Association and its contracts were suggested. The various changes suggested were duly carried out by the Association and for the time being the controversy whether a jute futures market is necessary or not came to an end.

Jute Committee

Another important event in the trade during the year was the formation of a jute committee consisting of 13 members of different bodies interested in jute. The terms of reference to the Committee were:

Foreign Competition

The comparatively higher prices of hessians that ruled during the current year has been said to have given opportunity to manufacturers outside India to compete with Indian jute manufactures, in world markets. Export of the Indian trade in hessians with America is reported to be lost and captured by the Dundee manufacturers while the same is the case with other countries too. Attention of the Indian Jute Mills Association has been drawn to this fact and they have been advised to reconsider the short working agreement in this light. But no steps have been taken yet.

It was reported that the number of jute mills in Japan is increasing and it is her intention to improve her trade by exporting her manufactures to other countries. Samples of hessian cloth were reported to have been received in Bombay; but so far no conisgnment of jute goods manufactured in Japan has been received. No doubt there are obstacles in the way of Japan competing with Indian mills but their margin of profit particularly in hessians is so large that Japan can fairly well compete with Indian mills if not in India itself, at least in other parts of the world markets. The increased export of raw jute to foreign countries during the current year when compared with the previous season amply bears testimony to this fact. It is desirable that all those interested in the jute trade must keep a close watch on further developments.

JUTE MANUFACTURES

Heavy Goods

This section did not show a similar improvement that was noticeable in the case of hessians. Heavy goods had a sympathetic rise at one time of the year. Following a good enquiry from the Eastern markets a fair strength was noticeable but on the whole the market was easy throughout the year. This was due to heavy stocks which stood at about 90 million bags at the close of 1933 against 71 million bags at the opening of the year. The exports also were poor which amounted to 414 million bags against 427 million bags in 1932.

The opening of the year 1933 was rather easy. Hessians 9 porters and 11 porters were quoted at Rs. 8 and Rs. 10-8 per hundred yards respectively. Later in the year towards May, when all the commodity markets began to show an upward tendency, the jute market also showed good strength and in the course of one month the values appreciated by something like 50 per cent. The highest levels could not be long maintained; but due to improved statistical position, the hessians market ruled much better throughout the year when compared with the conditions that prevailed in 1932.

Process Tax

Early in the year the Government of U.S.A. levied a process tax on cotton manufacturers at 4.2 cents a lb. in order to pay out the cotton grower in return for his curtailing the sowings of cotton. This placed the burlap bag manufactures in a comparatively advantageous position with that of cotton bag manufacturer. The latter naturally resented this and the Government of U.S.A. was approached by the interested parties to levy a compensating tax on the burlap bag manufacturer. Pending the final action taken by the Government towards the close of the year, all sorts of rumours were afloat in the market and naturally caused fairly heavy fluctuations in the price of hessians from time to time. On December 1, 1933 it was reported that the Farm Administration has announced a compensating tax of 2.9 cents a lb. on jute fabrics and jute yarn. On this announcement the market once seemed to crash; but after a short-lived and short decline, values again improved and the bearish effect of this tax was more or less lost.

Short-hour Agreement

The short-working-hour agreement that was arrived at during the previous year, between the member and non-member mills of the Indian Jute Mills Association, continued undisturbed during the year. The question of re-opening five per cent hessian looms and closing down equal number of heavy goods looms came for discussion but the matter was left undecided for the time being and the *status quo* maintained.

Statistical Position

The statistical position of hessian during the year 1933 has considerably improved over the previous year. The opening stock of the year was 88 million yards and the closing figure was just below 60 million yards.

The following table will clearly show the stock and consumption of hessian cloth in U.S.A. except Pacific coast during 1933 as compared with 1932 :

		Stocks at end of each month.		Consumption for month
		Spot	Afloat	
January	...	157	74	37

December	...	157	100	34

Jute Shipments

During the six months of the season 1933-34 (July 1 to December 31 last) 2,317,836 bales of jute, rejections, and cuttings were shipped from Calcutta and Chittagong to all places as compared with 1,797,534 bales in 1932-33.

COTTON

The year 1933 unlike 1932 was free from political disturbances at home calculated to affect the cotton market. But the greatest upset in the cotton market was of a quasi-political nature—the Japanese boycott of Indian cotton following the increase in the imports duty on cotton piecegoods. Equally artificial was the reduction of cotton crop in U. S. A., and the embargo on gold in that country.

At the opening of the year the quotations for Broach cotton were in the vicinity of Rs. 200 per candy; but as the year advanced, and the period of delivery drew nearer, values gradually began to decline and by April the same touched the low figure of Rs. 172. But a sudden change came in the month of May. Great hopes were entertained about the results of the World Economic Conference which met in London during the middle of June. Almost all the markets began to show an improvement and cotton naturally fell in to line. Prices began to soar up and touched Rs. 237 during June. But the high hopes were based on sentiment, and therefore could not lend any real support to the market. The World Economic Conference met and dispersed without coming to any immediate and tangible conclusions. Prices, therefore, began to decline and came down near Rs. 175 and ruled within a range of Rs. 10 during the rest of the year. Following the depreciation of the dollar caused by America's abandonment of the gold standard and also the curtailment of the cotton crop acreage in U. S. A., the American cotton market displayed a very firm tendency and values in New York exchange at one time almost doubled and a 50 per cent. rise over 1932 prices was almost maintained in this commodity. But this rise in American cotton had no effect whatsoever on the Indian cotton, partly because of the Japanese boycott of Indian cotton and partly because of the depreciation of dollar which placed the Indian cotton in a disadvantageous position in the world markets. If there had been no Japanese boycott of Indian cotton India would have shown in spite of depreciation of dollar, a better record of prices because the statistical position during 1933 showed a decided improvement over the year 1932. According to Hester's estimate the crop consumption and carry over figures of cotton were:

	Year ending 31-7-32	(Million bales) 31-7-33
Commercial crop ...	14.89	15.08
World's consumption ...	13.33	15.30
Carry over July 31 ...	13.44	11.78

The stock and export figures of Indian cotton, which present an unsatisfactory situation, would have been quite changed.

The receipts of Indian cotton at the six main ports amounted to 768 thousand bales during the season ending December 31, 1933, as against 725 thousand bales for the same period in 1932; while the exports of this season amounted to 432 thousand bales against 586 thousand bales in 1932. The stocks in Bombay at the end of 1933 were little below 700 thousand bales, as against about 550 thousand bales at the end of 1932.

Fortunately, China entered the Indian market and her purchases of cotton amounted to a little over 80 thousand bales for the season from September to December 1933, as against three thousand bales only during the same period in 1932. The Japanese boycott was very effective and complete, the exports of Japan amounting to only three hundred bales as against 241 thousand bales during the same period in 1932.

FORECAST 1932-33.

According to the Third All-India Cotton Forecast the total area sown amounts to 22,714,000 acres as against 20,761,000 acres (revised) at the beginning of December 1932 or an increase of 9 per cent. The total estimated yield is 4,619,000 bales as compared with 4,225,000 bales (revised) in the previous year or an increase of 9 per cent. Weather conditions have not been quite favourable and the present condition of the crop appears to be fair. The detailed figures for the provinces and states are shown below along with that of the previous years.

COTTON CROP FORECAST FOR 1933-34.

According to the second cotton forecast published in the Indian trade journal in November 1933, the total area under cotton so far reported was 19.64 million acres as compared with 18.41 million acres in 1932-33 at the corresponding time or an increase of 7 per cent.

The detailed figures for the provinces and states are given below:—

SECOND FORCAST OCTOBER, 1933.

PIECEGOODS

During 1933 the market ruled dull and easy with minor fluctuations in rates. The price index for cotton manufactures stands at 113 towards the close of the year as against 112 at the close of 1932. The highest figure reached during May and June was 115, and the lowest for the year was 112. The price for woolen and silk textiles was, however, steady due to the increased imports duty on them. The index figure for these textiles at the end of the year 1933 was 65 against 58 at the end of 1932. The lowest for the year was 54 during March 1933 and the highest was 71 during June, July and August.

Early in the year further depreciation of the yen made Japanese piecegoods very much cheaper and an alarm was raised in the trade against the dumping of Japanese piecegoods in India. The import duty that was raised to 50 per cent *ad valorem* or 5¼ annas per lb. on grey goods was extended for another year and an additional import duty was placed on imports of all cotton goods except British, raising it to 75 percent. This practically stopped the imports of Japanese piecegoods in India. The result was that a delegation was sent out to India by the Japanese Government to discuss the situation with the Indian Government. Negotiations were carried on, for a very long time and towards the close of the year a settlement was arrived at, the chief points settled being:

1. The import duty will be reduced from 75 to 50 per cent.

2. Japan will have the right to export to India

(a) 125 million yards of cotton piecegoods without any counted obligation at all.

(b) 200 million yards of cotton piecegoods provided Japan buys 1 million bales of Indian raw cotton

(c) and 75 million yards of piecegoods if she buys another 500 thousand bales of Indian raw cotton.

3. The imports are to be regulated on the following basis

45 percent grey goods
34 ,, coloured goods
13 ,, bordered grey and
8 ,, bleached goods.

For the purpose of smooth operation 10 percent variation to be provided in the first two categories or 20 per cent in the last two.

During the second quarter of the year there were pretty large spot sales of Japanese goods. But later on due to the increased import duty business in Japanese piecegoods came to a standstill and no fresh business was negotiated for the rest of the year. Business in Lancashire goods was showing improvement and the actual imports during 1933 were considerably larger over 1932. The situation of Indian cloth was very unsteady. Some of the mills have done very well and the demand for their goods was steadily expanding while several mills in Bombay Presidency for one reason or the other remained closed for the most part of the year. On the whole the tone of the market was steady and dealers were feeling more confident.

Yarn.

This section ruled steady throughout the year. During the latter part of the year stocks were small and were in the hands of strong dealers. This was responsible for the maintenance of price at fairly high levels. The demand from the consuming centres was not very brisk but on the whole there was a distinct improvement over the previous year.

WHEAT

Conditions in the wheat market during 1933 were easier when compared to those prevailing in 1932. The opening of the year was steady when Readies were quoted Rs. 4-6 commanding a premium of about 4 annas per maund over the May position. This was because of the scarcity of spot lots in port towns. May position was weak on hedging from the interior where the stocks were fairly large and prospects of new crop quite good. These conditions did not last long and with larger arrivals of ready goods and poor offtake, values began to decline and the premium over May Beta, was considerably narrowed down. During the spring, reports of large stocks in Canada and better crop prospects in Europe caused nervousness in the world wheat markets. Values began to decline and came down to Rs. 3-8. During May and June, there was again a rise, in sympathy with the general rise in commodity markets. Here the technical position of the market became strong due to the Farm Board, having liquidated its holding. But the rise could not be maintained. Towards the end of July there came a crisis in Chicago grain markets and in one day wheat lost about 20 cents per bushel. A similar fall also took place in the other grain markets. Consequently, operations had to be stopped in these markets for a few days. Later when the markets reopened a maximum fluctuation limit was fixed. This crisis had its repercussions on the Indian markets as well and values moved for some time in sympathy with American markets. Since then there has been a slow but steady decline in wheat, partly because of the slow movement of actuals and partly because of the low prices ruling over other food grains. Towards the close of the year Ready and May positions were both equal, the quotations being slightly below Rs. 3 per maund.

Wheat Agreement

A most important event of the year was the wheat agreement signed in London in August, 1933. The agreement was made between the important wheat producing countries, namely, Argentina, Australia, Canada and U.S.A. and the wheat importing countries, namely, Germany, Austria, Belgium, Bulgaria, France, U.K. and other European countries including U.S.S.R. The terms of agreement may be summarised as below:

1. (*a*) With expectation of a world trade of about 560 million bushels in 1933-34 the four major exporters agreed to the following maximum exports apportioned to each country.

	(In million bushels)
Canada	200
U. S. A.	47
Australia	105
Argentina	110

(*b*) The same exporters agreed to limit individual exports in 1934-35 season to 85 per cent. of the average production sown in 1931-33 after deducting domestic requirements.

(*c*) Any excess of world demand over the supplies available for export in 1934-35 as outlined in (*b*) to be shown by Canada and U.S.A. in view of their abnormal carry over.

2. Exports from the Danube Basin to be limited to 50-54 million bushels in 1933-34 and 1934-35.

3. U.S.S.R. agreed in principle but the figure for export has as yet been set.

4. The importing countries agreed (*a*) not to promote extensions in acreage (*b*) to encourage an increase in wheat consumption (*c*) to lower duty when the weekly average world price has been maintained at 63 gold cents per bushel for 16 consecutive weeks and thereafter when lower prices, warrant, consecutive to modify import restrictions in 1934-35 if prices show definite improvement.
definite improvement.

The following table shows the world wheat carry-over excepting Russia and China on 1st August.

	Million Bushels 1932	Million Bushels 1933
U. S. A.	398	390

Crop Forecast

The final All-India wheat crop forecast was published on August 10, 1933. The total area under wheat reported during the season 1932-33 is 32.99 million acres as against 33.80 million acres during 1931-32 or a decrease of 2 per cent. The total yield, however, was estimated at 9.45 million tons as compared with 9.02 million tons in 1931-32.

The detailed figures of area and yield by province and states are:

	Area		Yield	
	1932-33 1,000 acres	1931-32 1,000 acres	1932-33 1,000 tons	1931-32 1,000 tons
Provinces and states				
Punjab (a) ...	9,927	10,392	3,255	3,152
United Provinces (a)	7,789	7,864	2,744	2,633
Central Provinces and Berar (a) ...	3,553	3,628	670	693
Bombay (a) ...	3,161	2,836	782	592
Bihar and Orissa ...	1,235	1,221	492	469
N. W. F. Province ...	1,012	1,014	237	250
Bengal ...	143	145	41	34
Delhi	42	41	11	9
Ajmer-Merwar ...	22	31	6	9
Central India ...	2,068	2,189	340	339
Gwalior	1,394	1,492	319	297
Rajputana ...	1,268	1,508	355	364
Hyderabad ...	1,301	1,367	168	161
Baroda	74	72	31	31
Mysore	3	3	1	1
Total ...	32,992	33,803	9,452	9,024

Note. (a) includes Indian states.

It would be seen from the estimates given above, there is an increase in yield when compared with the final figures of 1931-32 in all the important wheat growing areas except in the Central Provinces and Berar, North West Frontier Province and Rajputana. The yield per acre in 1932-33 is 642 lb. as against 598 lbs. last year.

RICE

Conditions though very dull in this market during 1932 were still duller in 1933 when Rs. 200 to Rs. 300 was quoted for 100 baskets. In 1933 the opening was at about Rs. 175, the market fluctuated for the whole of the year within a range of Rs. 10. The highest price once touched was Rs. 190 only, during November 1933 but a further setback has, since, again taken place and the closing of the year was in the neighbourhood of Rs. 165.

The weakness in the market was due to poor demand from the Eastern markets which are the regular customers of Indian rice. Not only the demand was slack but even rice exported from India to Japan was re-exported back from Japan to India and naturally had a very weakening effect on the market. Great alarm was raised in the trading circles and representations were made to the Government of India requesting them to take necessary action in the matter.

Crop Forecast for Rice 1932-33

According to the final general memorandum on the rice crop of 1932-33, published in the Indian Trade Journal, the total area under cultivation in that year was 82,026,000 acres as compared with 84,260,000 acres in the previous year. The total yield was estimated at 30.65 million tons of cleaned rice, as against 32.95 million tons in 1931-32. The decrease was 3 per cent in area and 7 per cent in yield.

The condition of the crop on the whole was fairly good. But the crop was very much affected in Behar and Orissa and in the United Provinces by insufficient rains.

The table below shows the details for the provinces and states:

In addition to the above rice is also grown in Punjab, N. W. F. Provinces, Ajmer. Marwara, Manipur Pargana and certain other Indian states, their average area for the last five years ending 1930-31 was estimated at 2.81 million acres with an yield of 1.05 million tons.

Rice crop 1933-34

According to the all-India second Rice Forecast publishing on December 28, 1933, the total area under rice was 79.03 million acres against 79.18 million acres at that time of the previous year. Weather conditions were not quite favourable and the condition of the crop was, on the whole, reported to be fairly good.

In Bengal the season was on the whole satisfactory. The weather was favourable for sowing and the growth of development of the crop. Flood and rainfall caused some damages to the lowland tracts of the West and North Bengal. The total yield of Autumn rice was estimated at 2,254,000 tons as compared with 2,208,000 tons, the revised yield of the previous year and the total yield of the winter rice was estimated at 6,626,000 tons as against 6,935,000 tons at that time of the previous year.

Behar and Orissa.

The yield of the autumn rice was estimated at 956,000 tons against 936,000 tons in the previous year. The crop is reported to have suffered from rains and floods. The total yield of the winter rice for 1933 was estimated at 3,298,000 tons as compared with 3,214,000 in the previous year. Weather conditions were favourable except in certain districts like Purnea and Balasore.

Burma

The total yield was estimated at 7,838,000 tons of unhusked rice which is 5 percent above the corresponding estimated yield of the previous year. The condition of the crop was reported to be good in the principal exporting districts of Lower Burma, where a normal outturn is expected. The surplus available for export from 1933 crop was estimated at 4,324,000 tons of unhusked rice.

Madras

The yield of the first crop was reported to be normal except in some districts like Godavari, Chingleput, South Arcot, Trichinopolopy, Tanjore, Tinnevelly and Malabar. The seasonal factor for the presidency worked out at 97 percent of the average as against 99 per cent that time in the previous year.

United Provinces

The area was estimated at 5,998,000 acres as against 6,132,000 acres at that time previous year. The rainfall in July and August though above the normal in some places was distinctly below the average in others. For the provinces as a whole the average outturn was estimated at 70 percent of the normal for early rice and 75 percent for late rice.

Central Provinces

The yield was estimated at 1,880,000 tons the revised yield of the previous year. Seasonal conditions were, on the whole favourable for the crop although slight damage was caused by insects in parts of the districts. For the province as a whole a full normal outturn was expected, as against 103 per cent of the normal previous year.

TEA

There was a distinct improvement in the Tea trade in India during the year 1933, as compared with the previous years. The improvement was noticeable both as regards demand for internal consumption as well as in the sale price offered. The sales during 1933, were more lively and keen interest was shown by buyers throughout the season.

The following prices were realised for District averages during 1933-34 season, as compared with the previous two seasons.

Districts		1933-34	1932-33	1931-32
		Average price per lb.		
		As. p.	As. p.	As. p.

Dust ...	...	4 11	4 1	5 3

Restriction

The restriction plan agreed upon by the various tea growing countries and referred to in our last year's supplement, was brought into effect and export rights have been granted to various Tea growing estates, according to the quota fixed for them. This had materially helped to raise the price of the teas for export and the prices obtained for this grade were much better than that realised last year.

The export quota for 1933-34 fixed at 85 per cent, had been increased to 87½ per cent for the next season. At one time of the year, it was believed that the restriction of crop would also be made effective by way of legislation, but the efforts made by the India Tea Association for restricting crops are proving successful and no legislative action has been so far taken.

The export of Indian Tea from Northern India during April to December has been as below :

		Million lbs.		
		1933	1932	1931
Export to U. K.	...	212	258	232
Out Markets	...	28	34	37
Indian ports	...	17	19	16
Grand Total	...	258	311	285

The following figures show the imports and re-exports of tea from U.K. during calendar years 1933, 1932 and 1931.

Imports

		1933 Jany.-Dec.	1932 Jany.-Dec.	1931 Jany.-Dec.
India	...	278,763,000	312,199,000	276,964,000

Total	...	82,072,000	78,267,000	90,020,000

SHELLAC

Conditions in the Shellac market for the major part of the year 1933 were quite similar to that prevailed during the year 1932. The opening market was easy, at Rs. 20 per md. Then the market gradually began to decline. By the end of spring the values almost touched the previous year's low level of Rs. 16. However the months of May and June saw the rise in the values. This rise was, however, not due to any real improvement in the commodity itself, but was a part of the general rise, that took place at that time of the year in almost all the commodity market. By July the highest level of Rs. 27 was reached and a gradual decline was the feature of the following months. By September prices again dropped to Rs. 20 per md. In the meantime the statistical position of shellac was undergoing a change for the better. The continued low price of the commodity and falling demand from the various consuming countries, had pushed a good number of shellac makers out of the market and thus in accordance with a falling demand the supply also was being very much reduced. The available stocks also were passing from weaker to stronger hands and thus the technical position along with the statistical one was also favouring a rise. Towards the close of the year a few strong holders and speculators were reported to be cornering the commodity. The efforts were simultaneously carried out on London as well as Indian markets. The result was a very sharp rise in values. Towards the close the quotations for T.N. Shellac in Calcutta were about Rs. 43 per md.

During the ten months ended October 31 last, 183,281 chests of orange shellac, garnet and button lac were shipped from Calcutta as compared with 157,248 chests during the same period in 1932, 177,121 chests in 1931.

HIGHEST & LOWEST PRICE OF SHELLAC
DURING 1933

Months		Calcutta		London	
		Highest	Lowest	Highest	Lowest

LINSEED

The market during 1933 had ruled easy but narrow. Opening at about Rs. 4-12 the market began to decline in sympathy with the fall in the prices of grains in U.S.A. and by March values declined as low as Rs. 3-5 per md. But the depressed condition of trade did not last long and with the rise in commodity prices in general during the second quarter of the year, values began to improve from April and by July touched Rs. 5-3 which was the highest price of the year. At this stage movement of new crop was in full swing. Naturally the top level could not be maintained and by the following month values dropped to Rs. 4-8 per md. The crop for 1932-33 being almost equal to that of the previous season and the latter in itself being smaller than the previous seasons, the statistical position remained healthy throughout the year. Demand was fair from the consuming centres and was well met from time to time. Towards the close of the year the Government of Argentina fixed the selling limits for grains and seeds and this had a bullish effect on the market. But the raising of price was counterbalanced by the depreciation of the currency of Argentina and the natural result was that Indian price of linseed remained almost unaffected. In the closing month of the year favourable weather conditions reported from the growing districts for the crop of 1933-34, had a bearish effect on the market and the closing was about Rs. 4-3 per md. The tone of the market was however healthy.

The exports of linseed during 1933, had considerably improved over the previous years and the statistical position in India was thus still more healthy.

The following was the export of linseed from India during January to November :

1933	...	289,000	tons
1932	...	49,000	,,
1931	...	89,000	,,

The following was the highest and lowest quotations for linseed in Calcutta month by month during the year 1933 :

Prices for 1933

		Highest			Lowest		
		Rs.	a.	p.	Rs.	a.	p.
January	...	4	12	3	4	8	9
February	...	4	4	9	3	15	1
March	...	4	1	6	3	5	3
April	...	3	13	6	3	9	0
May	...	4	13	6	4	0	9
June	...	4	13	9	4	7	9
July	...	5	3	3	4	13	3
August	...	4	14	6	4	7	6
September	...	4	13	3	4	8	0
October	...	4	6	9	4	0	9
November	...	4	7	3	4	3	3
December	...	4	5	3	4	3	3

Linseed Forecast 1932-33

According to the all-India final memorandum on the winter oilseeds, the total area under linseed in 1932-33 is returned at 3.23 million acres which is 2 per cent below the area of 1931-32. The total estimated yield is 4.08 lakhs tons which shows a decrease of 3 per cent as compared with the yield of last year.

COAL

The market during 1933 had ruled dull and easy, though the conditions during the year under review was slightly better and encouraging than its predecessor. From the point of view of the prices there had been a persistent reduction which will be abundantly clear from the following table :

(Per ton)

		1931-32	1932-33	1933-34
Deshergerh	...	5/12	4/12	4/4
Poinati	...	5/4	4/8	3/15
Super Jharia	...	5	4/12	4/4
Selected Jharia	...	4/12	4/8	4/2

The 15 per cent. surcharge on rail freight on coal proved a great handicap on the coal trade of Bengal and Behar. The basic rail freight per ton, per mile for C.P. coal is stated to be lower than the basis rate on Bengal and Behar coal. Representations were therefore made to the Government of India to remove this surcharge and also to bring the basic rail freight on Bengal and Central Provinces coal to a parity.

During recent years the supply of Indian coal was more than the demand. This led to a continuous fall in prices for the past few years. The price levels now reached are not only unremunerative but so low that they were not witnessed in the history of coal for the past 20 years. This naturally set the people in the trade athinking. Various coal interests and mining associations in Bengal and Behar have, therefore, made a proposal for restricting the output of coal for the next three years to 75 per cent. of the present production. The average raisings of coal during the past three years had been little over 18 million tons while the demand was no better than 14 million tons. If this proposal is carried out it is sure to create healthy conditions in the coal trade.

The following are the quotations of coal contracted by the various railways which shows the extent of Bengal losing its coal trade in favour of other provinces :

(Thousand tons)

		1932-33	1933-34
S. I. R. ...	...	323	264
M. & S. M. ...	...	400	42
B. N. W. ...	...	286	245
B. B. C. I. ...	...	490	280
Assam Bengal	...	72	65

The only consoling factor from the all-India point of view is that the import of foreign coal in India is decreasing and that the tenders called for by the State Railways for 1933-34 are for a larger quantity than the previous year : They are :

(Thousand tons)

		1932-33	1933-34
By rail ...	...	1,753	2,080
By sea ...	...	140	170

The imports of foreign coal in India is decreasing, and the following table is useful for information :

Imports of Coal for eight months
1st April to 30th Nov., 1933
(in tons)

		1931	1932	1933
Bengal	...	1,185	689	353
Bombay	...	21,254	10,616	11,452
Sind	...	12,624	6,352	12,053
Madras	...	8,222	2,997	4,439
Burma	...	9,695	9,523	21,819
Total	...	52,980	30,177	50,166

The export of Indian coal to Burma, Hongkong and China continues but the rates offered by the latter markets are very unremunerative.

BULLION

The gold market in India during the year 1933 continued to rule steady; and prices so improved that the higher levels of 1932 proved to be the lower levels of 1933. The exports of gold from India maintained the level of 1932, though at times the quantities were small, due to unfavourable prices. The total quantity of gold exported from India since September 1931 to December 1933 amounted to about Rs. 154 crores. There were only a couple of shipments of gold from London to India during the third quarter of the year, when Indian prices ruled actually over London parity, and thus made it possible for Indian merchants to import gold. This situation was created by America purchasing gold in continental markets. It had a very bullish effect on Indian markets and prices here commanded a premium over London rates. The situation however did not last long; prices fell, imports ceased and exports were again resumed.

The stocks of gold in Bombay were unusually high during 1933. The highest limit at one time of the year reached over 10 lakhs toals, and this high level was maintained for a pretty long time. Towards the close of the year exports being brisk the stocks came down to about 5/6 lakhs tolas as against 3/4 lakhs at the end of 1932.

The following table shows the monthly price fluctuations of gold in India and London.

		In India						In London					
		Highest			Lowest			Highest			Lowest		
		Rs.	A.	P.	Rs.	A.	P.	£	s.	d.	£	s.	d.

December	...	31	4	0	31	0	6	6	7	0	6	4	8

SILVER

The year 1932 was very dull for silver but conditions in 1933 were still duller than the previous year. The prices that ruled in the earlier part of 1932 were never seen in 1933. The closing of 1932 was however very easy at about Rs. 50. The opening of 1933 was about the same condition, but as the year progressed, values began to appreciate in the hope, that silver question will receive the particular attention of economists during the World Economic Conference held in London during June 1933. By this time the values had gone up to Rs. 58 and strong bulls were holding silver very firmly in Indian markets. But their expectation did not materialise, when the conference rest content by entering into an agreement between the chief silver producing and stocking countries of the world. This was a great shock to the holders and there was a continuous fall in the market. Later a motion was tabled in U. S. A. to use silver as a part of currency and the announcement of President Roosevelt to purchase half of the silver produced in U. S. A. had some effect on the market: but it affected more the London prices rather than the Indian. Towards the close of the year Indian prices once again touched Rs. 55-8 but sharply fell back to Rs. 54 by the end of the year.

Stocks in India were pretty heavy at about 10,000 bars as against 8,000 over the closing of 1932. The demand however was very poor and was fully met by the sale of distress silver. Consequently the Indian prices were far too below the import parity, at times the discount being as high as Rs. 6 or Rs. 7 per 100 tolas.

This has been an unusual feature of the year. The lower parity during the previous years did not go above Rs. 3 or Rs. 4 per 100 tolas.

SILVER AGREEMENT

Of Heads of Agreement entered into by the Delegates of India, China and Spain, as holders of Large Stocks or users, of silver, and of Austrtlia, Canada, the United States, Mexico and Peru, as Principal producers of silver, at the Monetary and economic conference, held in London, July 1933.

Whereas, at a meeting of the Sub-Commission II (Permanent Measures) of the Monetary and Financial Commission of the Monetary and Economic Conference held on Thursday, July 20th, 1933, the following resolution was unanimously adopted.

"Be it resolved to recommend to all the Governments parties to this Conference:

"(*a*) That an agreement be sought between the chief silver producing countries and those countries which are the largest holders or users of silver with a view to mitigating fluctuations in the price of silver; and that the other nations not parties to this agreement should refrain from measures which could appreciably affect the silver market;

"(*b*) That the Governments parties to this Conference shall refrain from new legislative measures which would involve further debasement of their coinage below a fineness of 800/1000;

"(*c*) That they shall substitute silver coins for low-value paper currency in so far as the budgetary and local conditions of each country will permit;

"(*d*) That all of the provisions of this resolution are subject to the following exceptions and limitations;

"The requirements of such provisions shall lapse on April 1st, 1934, if the agreement recommended in paragraph (*a*) does not come into force by that date, and in no case shall extend beyond January 1st, 1938.

"Governments may take any action relative to their silver coinage that they may deem necessary to prevent the flight or destruction of their silver coinage by reason of a rise in the bullion price of the silver content of their coin above the nominal or parity value of such silver coin", and,

Whereas the Governments of India and Spain may desire to sell certain portions of their silver holdings, and it will be to their advantage that the countries which are large producers of silver should absorb silver as herein provided, to offset such sales, and,

Whereas, it is to the advantage of the large producing countries named in Article 2 that the sales of silver from monetary stocks be limited as herein provided, and,

Whereas, it is to the advantage of China that sales from monetary stocks of silver be offset by purchases as herein provided, with a view to its effective stabilisation;

Now, therefore, it is agreed between the parties hereto:

1. (*a*) That the Government of India shall not dispose by sale of more than one hundred and forty million fine ounces of silver during a period of four years, commencing with January 1st, 1934. The disposals during each calender year of the said four year period shall be based on an average of thirty-five million fine ounces per year, it being understood, however, that, if in any year, the Government of India shall not dispose of thirty-fives million fine ounces, the difference between the amount actually disposed of and thirty-five million fine ounces may be added as additional disposals in subsequent years. Provided further that the maximum amount disposed of in any year shall be limited to fifty million fine ounces.

(*b*) Notwithstanding anything previously stated in this article, it is understood that if the Government of India should, after the date of this agreement, sell silver to any Government for the purpose of transfer to the United States Government in payment of war debts, such silver shall be excluded from the scope of this agreement;

(*c*) Provided, however, that, when the total of the disposals referred to in paragraph (*a*) above plus the sales referred to in paragraph (*b*) above by the Government of India under this agreement shall amount to one hundred and seventy-five million fine ounces, the obligation of the parties hereto shall cease.

2. That the Governments of Australia, Canada, the United States, Mexico and Peru, during the existence of this agreement, shall not sell any silver, and shall also in the aggregate purchase, or otherwise arrange for withdrawing from the market, thirty-five million fine ounces of silver from the mine production of such countries in each calendar year for a period of four years, commencing with the calendar year 1934. The said Governments undertake to settle by agreement the share in the said thirty-five million fine ounces which each of them shall purchase or cause to be withdrawn.

3. That the silver purchased or withdrawn in accordance with Article 2 above shall be used for currency purposes (either for coinage or for currency reserves), or be otherwise retained from sale during said period of four years.

4. That the Government of China shall not sell silver resulting from demonetised coins for a period of four calendar years commencing January 1st, 1934.

5. That the Government of Spain shall not dispose by sale of more than twenty million fine ounces of silver during a period of four years commencing January 1st, 1934. The disposals during each calendar year of the said four-year period shall be based on an average of five million fine ounces per year; it being understood, however, that, if in any year the Government of Spain shall not dispose of five million fine ounces, the difference between the amount actually disposed of and five million fine ounces may be added as additional disposals in subsequent years; provided further that the maximum amount disposed of in any year shall be limited to seven million fine ounces.

6. That the Governments concerned will exchange all such information as may be necessary with regard to the measures to fulfil the provisions of this memorandum of agreement.

7. That it is understood that subject to the provisions of Article 8, the undertakings of each party to the present memorandum of agreement are conditional upon the fulfilment of the undertakings of every other party thereto.

8. That this memorandum of agreement is subject to ratification by the Governments concerned. The instruments of ratification shall be deposited not later than April 1st, 1934, with the Government of the United States. It shall come into force as soon as the ratifications of all the Governments concerned are received, provided that all the ratifications are received before April 1st, 1934. A notice by any Government that the affirmative action necessary to carry out the purposes of this agreement has been taken will be accepted as an instrument of ratification. Nevertheless, if one or more of the Governments enumerated in Article 2 fail to ratify by April 1st, 1934, the agreement shall come into force at that date if the other Governments mentioned in Article 2 which have ratified notify the other Governments which ratify that they are prepared to purchase, or cause to be withdrawn, in the agregate the amount of silver mentioned in Article 2. The Government of the United States is requested to take such steps as may be necessary for the purpose of the conclusion of this agreement.

In witness whereof the undersigned have signed the present memorandum of agreement.

Done at London this 22nd day of July, 1933, in a single copy which shall be deposited in the archives of the Government of the United States.

NEW INDIA'S VALUATION RESULTS

The results of the first valuation of the Life department of the New India Assurance Company Ltd., as at 31.3 1933 have just been announced. The name of New India is well known in India and abroad as the biggest general insurance company of India doing fire, marine, accident and general insurance business since the year 1919. It is true that many Indian Life insurance companies have been established much earlier than New India and were doing good business. But so far as fire, marine and other general insurances were concerned, only foreign companies reigned supreme until the establishment of New India. In 1919 the New India was ushered into existance with a huge subscribed capital of more than Rs. 3½ crores and a paid up capital of Rs. 71 lakhs, and with a very strong body of Directorate consisting of eminent financiers and businessmen. Since then it has captured part of the general assurance business, and was doing very good business not only in India but also in United Kingdom and U.S.A. Both in its size as regards paid up capital and the volume of fire, marine and accident business done by it, it was easily the leading composite insurance company of India. Encouraged by the splendid success it has achieved in the other walks of insurance, the management of the New India opened a life department in 1929. And the phenominal success which greeted this department during these few years, has eclipsed the success attained by the other departments. Even during the fourth year of its existance the life department has shown a new business of more than Rs. 1 crore which is a record not attained by any Indian life office so far. The total business in force at the end of March 1933 exceeded Rs. 2 crores and the life fund then was Rs. 8.68 lakhs.

After four years of working, New India has made a valuation of the assets and liabilities of its life department as at 31st March, 1933. The results which have just been announced to the public are quite satisfactory. The valuation which, we are told, was made on a stringent basis assuming 4 per cent. interest, has revealed a surplus of Rs. 2,57,369. It is noteworthy that, while valuing the assets no credit was taken for the appreciation in the market value of the securities held by the company, although the company has a big investment reserve fund of about Rs. 6 lakhs to cover depreciation in securities. Out of the surplus disclosed 10 per cent. or Rs. 25,737 was transfered to the shareholders' account and the balance of 90 per cent. was utilised towards providing reversionary bonus to all its participating policyholders. A reversionary bonus of Rs. 15 per thousand per annum has been granted in respect of Whole Life and Whole Life Limited payment policies and a reversionary bonus of Rs. 10 per thousand per annum has been granted in respect of Endowment Policies. This is indeed a good achievement considering the age of the life department. Another notable feature is that the company has decided to grant interim bonuses at the full above rates to policies which may become claims before the next valuation. The company has decided to make triennial valuations though the first valuation covered a period of four years. The next valuation of the company therefore falls due on 31.3.1936. As a result of the valuation the company has decided that a special rebate of 2½ per cent. will be allowed to all its policyholders, old and new, who pay their premiums by annual instalments.

Considering the fact that this is the very first valuation of the life department, and considering also that the expenses of a life office during the early stages of its existance would be heavy, it is indeed creditable that New India has been able to show sufficient surplus after providing the necessary reserves in respect of all its policies inforce. The bonus rates are also liberal for an office of its age. We congratulate the management for this splendid result and we wish the company every success in its onward march.

THE ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE COMPANY LTD.

The balance sheet of the Oriental sets a pleasant, but far from exciting, task for the reviewer. Ever since its establishment in 1874 the Oriental has been synonymous in the public mind with towering stature, heady progress and impregnable strength. An insurance company is always judged, firstly, by its progress in acquiring new business, then by efficient management, imposing size, and an investment policy, at once safe and remunerative. All these conditions, the Oriental has ever than satisfied. Only during the giltedge slump of two years ago was there room for unfair critics to point to the deterioration in the value of Oriental's investments in giltedge securities. But the management took the wind out of the sail by providing amply for depreciation, and when giltedge revived, this provision created a regular surfeit of assets. The figures in the balance-sheet of the Oriental form an impressive array, to be surveyed with awe and satisfaction and call for little scrutiny and no comment. To have maintained the first place in new business in India, even as compared with foreign companies without detriment to any of the causes of sound insurance is a tribute to the management and a pride to the country.

The phenomenal growth in the size of this life assuranct company can easily be seen from the accompanying tabular statement.

Year		Total Assurances in Force	Life Fund	Annual Income
1881	...	72	4	2
1891	...	3,48	58	16
1901	...	7,73	1,86	37
1911	...	11,37	3,98	62
1921	...	16,08	5,33	98
1931	...	41,49	11,32	2,45
1932	...	43,95	12,10	2,67

The New Business of the company for the year 1932 amounted to Rs, 5,94 lakhs showing an increase of Rs. 59½ lakhs over the 1931 New Business. The total life business in force at the end of 1932 amounted to Rs. 43,95 lakhs including the vested bonus under 2,07,531 policies. The premium income for the year 1932 amounted to more than Rs. 2 crores and the interest income to Rs. 60 lakhs. It is gratifying to note that the company is gradually reducing its ratio of expenses to the premium income, the expense ratio in 1932 being 21 per cent. as against 22.4% in the previous year. The investment policy of the company is very conservative and nearly 80 per cent. of its total assets (Rs. 12,90 lakhs) is invested in giltedged securities. The other important items of investment are policy loans and house properties. It may be noted that the market values of the giltedged securities held by the company, appre- Thus it can be easily seen that the Oriental is one of ciated by nearly Rs. 2,08 lakhs at the end of 1932. the soundest and safest insurance companies of India. We congratulate the management on their splendid achievement and wish them an ever increasing prosperity.

THE JUPITER GENERAL

Very creditable progress is shown in the Revenue accounts and Balance Sheet of the Jupiter General Insurance Company Ltd., for the year ending 30th June, 1933. The Jupiter General is one of the few well managed and strong Indian composite insurance companies. The company transacts fire, marine, accident and life insurance business. The Fire Account of the company shows a premium income of Rs. 14.8 lakhs nearly, which is in excess of the previous year's by Rs. 2.2 lakhs. The fire losses during the year amounted to Rs. 6.2 lakhs or 41.8 per cent. of the premium income, the expenses of the management and commission amounted to Rs. 6.5 lakhs or 44.2 per cent. of the premium income. The Fire Fund at the end of the year stood at Rs. 7½ lakhs or 50.8 per cent. of the premium income. This includes the reserve for the unexpired portion of the current year's risk. It would be better if the company strengthens the reserve of this department a little more particularly in view of the fact that it is usual to set apart 40 per cent. of the premiums as a reserve for the unexpired portion of the risk. The marine and Accident department of the company have suffered a slight decline in business during the year under review, partly due to the depressed times and partly due to the company's cancellation of treaty in the Accident department. The premiums of the Marine department amounted to Rs. 1.8 lakhs claims, paid up accounted for .79 lakhs or 44.6 per cent. of the premium income, and the Marine Fund at the end of the year was Rs. 2.2 lakhs or 124.2 per cent of the premium income. The premium income of the Accident department stood at Rs. 1.5 lakhs, the claims at Rs. .97 lakhs or 64.8 per cent. of the premium income, management expenses at Rs. .77 lakhs or 51.4 per cent. of the premium income and the Accident Fund at the end of the year amounted to Rs. 1.1 lakhs or 73.8 per cent. of the premium income.

The life department of the company which was opened in 1928 shows considerable progress during the 5 years of its working. Though the New Business of the company at Rs. 14 lakhs has suffered a slight decrease of Rupees one lakh compared with the previous year, the general progress of the department is easily seen from the revenue account. The total premiums received increased to Rs. 2.44 lakhs from Rs. 1.96 lakhs in the previous year and the Life Fund was increased by a substantial amount of Rs. 1½ lakhs to Rs. 3.6 lakhs. The expenses of management and commission of this department amount to Rs. .98 lakhs showing an expense ratio of 40 per cent. Though the expense ratio is not very high considering its age, it would be better if the company tries to reduce it to a much lower level. The total sums assured in the books of the company at the year end amounted to Rs. 44 lakhs nearly.

The balance sheet of the company shows on the Liabilities side, a paid-up capital of Rs. 23.7 lakhs, the funds of the four departments as mentioned above, a reserve fund for depreciation of securities amounting to Rs. 2.2 lakhs, a reserve fund for bad and doubtful debts amounting to Rs. 8 lakhs, outstanding claims of Rs. 4.4 lakhs profit and loss account amounting to Rs. 1.5 lakhs and other miscellaneous liabilities amounting to Rs. 11 lakhs nearly. It is noteworthy that the company has sufficiently provided for depreciation of securities and for bad and doubtful debts. The investment policy of the company seems to be conservative as a major portion of the assets is invested in giltedged securities. This is justifiable so far as the assets of the general assurance departments are concerned but life assets need not all be invested in giltedged securities particularly when the interest yield is so low at the present time. The company has given a separate balance for the life assets amounting to Rs. 4.7 lakhs, 85 per cent. of which is invested in giltedged securities. The assets side of the general balance sheet shows that Rs. 35 lakhs nearly out of a total of Rs. 58 lakhs is invested in giltedged securities. Out of this Rs. 35 lakhs, Rs. 16¼ lakhs is invested in United States of America where also the company's operations extend. The outstanding balances account for Rs. 7.7 lakhs, cash amount to Rs. 6.2 lakhs and miscellaneous assets accounting for about Rs. 5 lakhs. It will be seen that the company invests its funds only in Government and other Municipal and Port Trust securities. Though this is the safest form of investment, yet the other important criterion of investment of an insurance company namely the earning capacity should not be neglected entirely. We trust the company would in future extend its investment activities at least so far

HINDUSTHAN CO-OPERATIVE INSURANCE SOCIETY, LTD.

as its life business assets are concerned. The financial position of the company is quite strong and sound and we wish the company all the success it deserves.

ASSICURAZIONI GENERALI

We have received a copy of the Revenue account and Balance Sheet of, Assicurazioni Generali, an Italian composite insurance company of Trieste—Venice, for the year ending December 31, 1932. The company has a paid up capital of 60 million lire with two head offices one at Venice for Italian business and another at Trieste for foreign business. The company which was established in 1831 possess an extensive organisation throughout the world including India and transacts life, fire, marine and burglary insurance business.

The Life department which seems to be the biggest shows a premium income of about Lire 307 millions, claims paid amounting to Lire 71 millions and a life fund of lire 1,260 millions. The Fire department shows a premum income of fire 147 millions, a claim of lire 39 millions and a fire fund of lire 74 millions. The Marine department shows a premum income of lire 80 millions, a claim of fire 13 millions and a marine fund of 23 millions. The Burglary department shows a premium income of lire 14 millions, a claim of lire 2 millions and a fund of about lire 10 millions. The expenses of management and commission are not given separately but the combined expenses including the taxes payable amount to lire 125 millions. The combined interest on the investments of the company amounted to lire 81 millions, the combined profits for the year 1932 amounting to lire 30 millions.

The Balance sheet of the company as on 31st December 1932 shows on the Liabilities side a paid up capital of lire 60 millions, and combined insurance funds amounting to lire 1,315 millions. It is noteworthy that the company has provided for a number of reserve funds to cover against fluctuations in investments, to cover against depreciation of house property values etc., besides a statutory surplus of lire 26 millions. Thus the reserve to provide against fluctuations in the value of securities amount to lire 36 millions, the reserve against depreciation of house properties amount to lire 63 millions, besides a special reserve of lire 50 millions and the statutory surplus of lire 26 millions. Other items on the liabilities side include outstanding claims of lire 64 millions, staff pension fund of lire 54 millions, debit balance of lire 128 millions with re-insurers, and deposit by way of guarantee as per contra of lire 109 millions. On the Assets side gilt edged securities including provincial and Municipal loans and Public utility bonds account for lire 791 millions or 40 per cent. of the total assets (lire 1,971 millions), stocks and shares account for lire 191 millions or nearly 10 per cent., house properties amount to lire 337 millions or 17 per cent., loans on policies amount to lire 155 millions or 8 per cent., credit balances with reinsurers amount to lire 95 millions, deposits by way of guarantee as per contra amount to lire 109 millions. The assets are all well distributed and sufficient reserves have been set apart to provide for adverse fluctuations and depreciations. The Balance sheet clearly shows the strong position of the company both as regards the capital and the reserves and as regards the enormous insurance business transacted by it.

THE SCIENCE AND PRACTICE OF AIR CONDITIONING

BY WM. W. KING, AMIH & VE

The subject of air conditioning is one which has received a considerable amount of local attention during recent years. This is not surprising as it can play an important part in promoting the welfare of any country. It certainly may be questioned whether air conditioning apparatus can be applied to any other country with more advantage than to India.

And what is air conditioning? It is a specialist field of engineering which has for its object the provision and maintenance of any desired atmospheric conditions within buildings or similar enclosures entirely irrespective of the outside weather. That is to say, the keeping of an interior at any desired climate regardless of how hot, cold, dry or humid the outside weather may be.

Obviously for apparatus to be capable of 'manufacturing' a climate it must be capable of effecting definite control over the following factors, namely:—

(1) Temperature
(2) Humidity
(3) Purity
(4) Movement

In order, therefore, to be able fully to comprehend the subject of air conditioning it is necessary to have some general knowledge of the composition of the atmosphere and its physical properties. It is not the writer's intention to recapitulate all that is known of the laws of gases and other relevant natural phenomena, but merely to define certain terms which will be used subsequently in this article.

Firstly, there is the dry bulb temperature. This is the temperature indicated by the ordinary thermometer, which contrary to popular belief is no criterion either of personal comfort or of the heat content of air. It merely gives an indication of the rate at which heat can pass to bodies on a lower temperature plane.

The wet bulb temperature is of supreme importance in air conditioning work and a correct understanding of what this term means is essential.

It has been proved mathematically and demonstrated experimentally that the 'total heat' of air is constant at any given wet bulb temperature, and this permits the definition of the wet bulb to be enunciated as that temperature at which air would become saturated if moisture were added to it adiabatically, i.e., without the addition or subtraction of heat.

Wet bulb readings to be accurate must be taken with the moistened bulb vigorously ventilated, and a common method is by means of a sling psychrometer which merely consists of two ordinary thermometers of which the bulb of one is kept moist. The thermometers are whirled in the air by a suitable handle and a reading taken immediately they come to rest.

The dew point is the temperature to which air must be lowered in order that its moisture may commence to condense out.

Relative humidity is an expression as a percentage of the degree of saturation of the air with moisture. Thus air at 45 per cent. relative humidity indicates that the air contains 45 per cent. of the moisture it could contain if saturated at the specified temperature.

Absolute humidity is the actual weight of moisture (generally expressed as so many grains per cubic foot) in the air.

That completes the only reference that need be made to the terms customarily used in the physics of this subject, and we will now proceed to describe what is known as a 'conditioning machine' such as is used for the generation of an artificial climate in a building.

The fundamentals of such a machine are of so simple a nature that some difficulty may be experienced in believing that with the equipment described it is possible to maintain literally any desired climate in a building, however severe or unpleasant the outside atmosphere may be.

A conditioning machine simply consists of a centrifugal fan driven by some convenient source of power which is so arranged as to draw outside atmospheric air through a chamber in which a very fine spray of atomized water is generated by a power driven pump.

Providing no source of heat or cold be applied to the water, the air after passing through the spray will emerge in a condition of 100 per cent. relative humidity at the temperature of the outside wet bulb, which in the drier parts of India is generally 30 to 40 degrees F. lower than the dry bulb temperature.

To take a common condition in a district having a climate such as that experienced in Delhi during the hot weather. The dry bulb temperature will be 110 degrees and the wet bulb (as read by the sling psychrometer) will be 70 degrees F. Thus air will leave the fan saturated (but only in the sense of vapour, not liquid water, being held in the air) and by permitting a predetermined quantity to enter a building the latter may be cooled to any desired temperature provided it be higher than 70 degrees F.

It will be at once appreciated that the absorption of the internal heat of the building will not only raise the temperature to the desired figure but that the relative humidity of the air simultaneously will be lowered from its initial saturated state to any desired percentage subject to certain obvious limits.

The above represents the application of the principle of "Evaporative Cooling" and is of tremendous service in hot and dry districts.

While such evaporative cooling apparatus has a very wide application and by reason of its comparatively low cost fulfils most needs, its usefulness is limited by the dryness (i.e., low relative humidity) of the climate of the district in which it is installed. In humid climates such as prevail in Bombay, Calcutta, Ceylon, etc., such equipment would be of little value and the conditioning machine is modified in basic manner to meet the altered conditions.

This alteration consists of employing means to permit the machine to deliver air at a lower dewpoint temperature than that of outside wet bulb.

To this end the spray water is artificially cooled by means of a refrigerator. The degree of cooling can be whatever is desired, provided of course that the water be not brought below 32 degrees F. In actual practice it is seldom necessary for the spray water temperature to be lower than 60 or even 65 degrees F.

The incoming air passing through such artificially cooled water will become saturated a few degrees above the water temperature and will precipitate or condense out the surplus moisture in the cold spray in he ratio of the entering and leaving dewpoint temperatures. It naturally must appear paradoxical that it should be possible to dry air by passing it through a water spray, but a little consideration will convince one that no physical laws are infringed.

When the conditioning machine is used in the manner described above, the process is known as cooling and dehumidification, because the absolute humidity of the resulting atmospheric conditions is lower than that of the outside climate.

To decribe the methods of distributing the cooled air throughout the building equipped with air conditioning apparatus and the various means employed for automatically varying the volume, temperature and hygrometric state of the air would occupy too much space in an article of this nature. Suffice it to say, however, that research extending back for a period of twenty years has evolved methods which permit the air conditioning engineer to design equipment which can for indefinitely long periods maintain any desired atmospheric conditions with complete conditions with complete accuracy.

The development of this science has in no small degree contributed to the rapid industrial development so obvious in America and Europe to-day. Hardly an industry but manufactures its product in that climate best suited to bringing out its peculiar physical characteristics.

The tobacco and artifical silk, cotton, confectionery, paper and film industries are but a few, and even here in India it is not generally known that some 50 cotton mills, with the help of this type of apparatus operate at temperatures frequently 25 degrees F. below that of the outside shade. The fermentation of tea in Assam is carried out under artificially generated atmospheric conditions, and in most provincial governments the legislators deliberate in conditioned air. Three or four office buildings of large dimensions have been conditioned, and there is little doubt that employers will rapidly appreciate that cool and comfortable conditions for their staff will increase the quality of work.

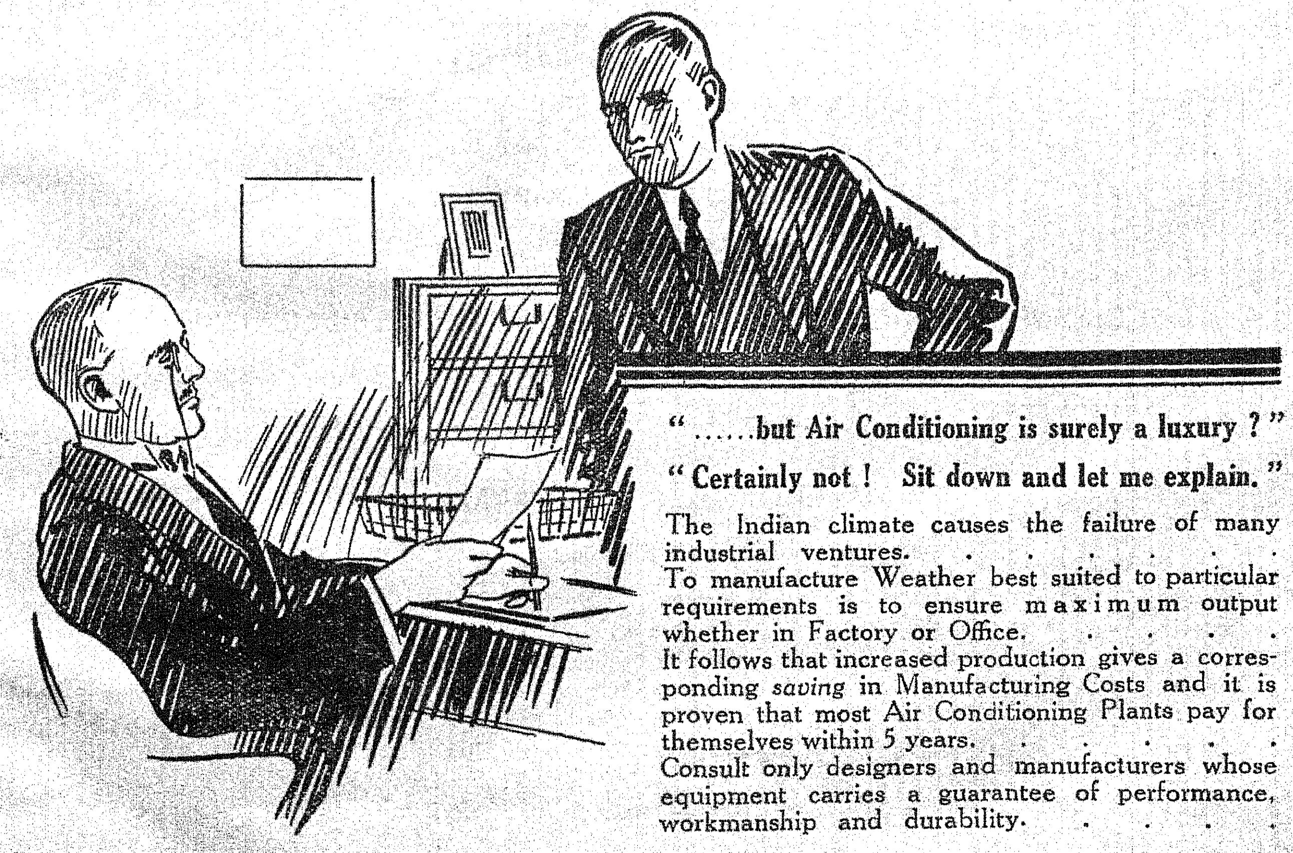
Many industries hitherto held to be incapable of operation in India owing to the lack of suitable atmospheric conditions can be with the help of Air Conditioning machinery be carried on as well here as elsewhere, and it would not be unreasonable to state that the industrial expansion of this vast country will depend to a great extent upon the specialist in this field.

During the current year a new factory has been started in Calcutta to manufacture cigarettes with high speed machinery of the most modern type.

Accurate control of the internal atmospheric conditions was absolutely essential in order to ensure uninterrupted production and such has been the success of the air conditioning equipment in this particular factory that it is claimed that the output is already equal to that of similar factories in Europe where far more highly skilled labour is employed to operate the various machines.

The foreign remarks have been confined to air conditioning as applied to large buildings and various industrial processes, but mention must also be made of the recently developed room cooler. This machine is the result of several years research work, and follows the large central station type of plant in the same manner as the domestic refrigerator came into being many years after large commercial cold storage and ice making plants had been proved a success.

The latest type of room cooler is a most compact unit comprising a complete refrigerating plant, air cooler and circulating fans all mounted into a steel cabinet of a most pleasing design. One or more of these cabinets are used; the actual number required varying with the size and type of construction of the room to be cooled. These sets are now being manufactured in large quantities and cost no more than the average motor car. Their popularity in Western countries is already established, and the day is not far distant when residents in India will no more think of omitting to equip their flats and bungalows with room coolers than to forget a domestic refrigerator.



" .....but Air Conditioning is surely a luxury ? "

" Certainly not ! Sit down and let me explain. "

The Indian climate causes the failure of many industrial ventures. . . . .

To manufacture Weather best suited to particular requirements is to ensure maximum output whether in Factory or Office. . . . . .

It follows that increased production gives a corresponding *saving* in Manufacturing Costs and it is proven that most Air Conditioning Plants pay for themselves within 5 years. . . . . .

Consult only designers and manufacturers whose equipment carries a guarantee of performance, workmanship and durability. . . . . .

THE BUELL PULVERISED COAL FIRING SYSTEM

British in design—British in manufacture—to use Indian coals at their maximum efficiency

The features of the Buell Pulverised Fuel System which experience has brought out in power generating plants are :

FACTS!

A water tube boiler having an evaporative capacity of 25,000 pounds per hour normal load and 31,000 pounds per hour maximum load, and utilizing the Buell Unit System is operating at an average efficiency of 83 per eent.

Convert your Boilers to the Buell System and ensure RELIABILITY & MAXIMUM EFFICIENCY.

1. RELIABILITY IN SERVICE

Resulting from the design, materials and workmanship employed, enabling plants to operate over long periods without involuntary stoppage.

2. FLEXIBILITY IN OPERATION

Resulting from the complete control of heat liberation in the furnace, following the ease of adjustment of coal and air supply.

3. MAXIMUM OPERATING EFFICIENCY

Resulting from the close control of air supply and its intimate mixing with the powdered coal—maintained consistently at a commercial degree of fineness.

4. ECONOMY

Resulting from the adaptability of the system to cheaper grades of coal, minimum heat losses from carbon in the ash and excess air.

DANGERS OF FUEL WASTAGE

IMPORTANCE OF EFFICIENT HEAT INSULATION

Wherever a difference in temperature exists there is also an inevitable natural tendency towards the resump[illegible] conditions—or a state of equilibrium, in [illegible] manner as water always attempts to find its [illegible]el. This process of temperature equalisation can only be accomplished by the flow of heat energy from the body at the higher temperature to that at the lower temperature, by conduction radiation and convection. The term "heat insulation" can be correctly applied to anything interfering with or causing an obstruction to this natural transmission of heat energy.

In the case of an ordinary insulated pipe line conveying steam to a machine, there really exists two concentric envelopes, one of metal to hold the steam and resist its pressure, and the other of insulation to reduce heat loss. If the steam is leaking from a faulty flange joint it is perfectly obvious that wasteful loss is taking place and steps are at once taken by the Engineer in charge to rectify the fault.

When an excessive amount of heat is escaping from the pipe line there is no obvious demonstration of the fact, the fuel wastage involved continuing unnoticed and unchecked, although the financial loss is probably much greater than in the case of an escape of steam. As approximately the same amount of fuel is daily used in operating the plant, the continuous wastage in fuel costs and reduced working efficiency are not readily realised. In these circumstances, having no better basis with which comparison could be made, the controlling staff are frequently under the impression they are obtaining the very best results out of the plant under their charge, but this can readily be proved to be a misapprehension by substituting really efficient insulation on the boilers and pipe lines in place of the existing inefficient coverings. The following example illustrates our point:—

The heat loss from 100 lineal feet of 6″ bore standard steam pipe conveying steam at a temperature of 600°F. represents a waste of 213 tons of coal per annum if the pipe is left uninsulated. The application of a cheap, low grade non-conducting composition would reduce this wastage by 60% to 70% but a saving of no less than 95% could be obtained by utilising 2½ inches of Newalls 85% Magnesia Insulation. The latter costs little, if any, more than the inferior material, taking into account all labour costs for fitting the respective coverings. Not only would the 85% Magnesia repay its initial cost within the first four months, but it would also show a saving, as compared with common composition, of approximately 65 tons of coal per annum. In addition to the actual fuel saving, a vast improvement would be noticeable in the overall efficiency of the plant, the amount of condensation in the pipe lines, or alternatively if superheated steam be used, the temperature drop in the pipe lines, would in each case be considerably reduced, enabling the turbines or other plant to operate much more economically.

There are many systems of power generation in use but, with few exceptions all of them operate on the thermodynamic cycle *i.e.*, the production of mechanical work from heat energy obtained from the latent energy in fuel. The efficiency of this cycle of operation depends on the ratio of utilisation to generation, and the higher this ratio can be made, the greater the economy effected. Heat conservation by means of efficient insulation plays an important role in this scheme, as the insulation can be regarded as a means of confining energy to the channels in which it is of greatest service.

Working temperatures in modern power plants are becoming steadily higher as new developments are introduced. Heat losses per unit area increase at a rate far exceeding the proportionate increase in working temperature. It is therefore obvious that at high temperatures the necessity for efficient insulation is much greater than at low temperatures, and if such material be fitted, the economies which can be effected under high temperature conditions are also much greater.

One of the most important functions of adequate and efficient insulation is that it makes possible the storage of heat energy until such time as it is required, thus permitting the plant to be run economically and stopped at regular intervals. For example, steam accumulators are used to store high temperature steam required for processes of manufacture entailing continuous working conditions which must be maintained even when the boiler plant is not working at full capacity. In a similar manner, water, stored in large efficiently insulated tanks, can be heated up during the night when calls on power are at a minimum, and used during the following day without further application of heat.

An efficient heat insulator is a medium, possessing to a marked degree the following essential characteristics:—

(*a*) Very low heat conducting properties.

(*b*) A structure such as completely eliminates heat transmission by convection currents within the material itself.

(*c*) The essential features necessary to minimise radiation losses by presenting a low surface temperature to the surrounding air and adjacent objects.

(*d*) Low Heat Capacity—in order to minimise the initial amount of heat absorbed by the insulation to ensure static thermal conditions within its own mass.

(*e*) Reasonably good Mechanical Strength—to withstand the wear and tear to which it will be subjected under working conditions.

(*f*) Permanency of Form and Structure. Materials which require to be packed into position are liable to density variations in service due to "settling down"—with consequent loss of efficiency.

(*g*) Non-Corrosive Action at all temperatures on the surface to be insulated, whether the insulation be applied wet or dry.

(*h*) Ability to resist damage by moisture. Even if saturated, the insulation should be such as would permit of moisture being dried out by the internal heat of the apparatus without permanent adverse effects taking place.

In Newalls 85% Magnesia and Newtempheit Heat Insulations all these desirable features are carefully combined to a very high degree, thus enabling these materials to give such general satisfaction throughout their long period of service which, in most cases, exactly corresponds to the full working life of the plant to which they are fitted.

WORLD OF INDIAN FINANCE

Calcutta, January 5, 1934.

The New Year has opened amidst less sombre conditions than we have known for two or three years. There is a more cheerful outlook in Britain for trade, budgetary position, strength of sterling and intrinsic vitality of the giltedge and securities markets. Though it does not necessarily follow that, in all these respects, there is a welcome change, to a corresponding or even any extent, in India, the authorities here are accustomed to feel brighter and braver if contemporary conditions in England justify sunnier prospects. We may, therefore, bask in the sunshine of the better days that are, everyone seems to be convinced, in store for Britain. We are amongst those who believe that India's needs and requirements are unique and require to be dealt with in a way different from those of the country of our rulers. We also believe that many a mistake in the past was due to the belief on the part of the powers-that-be that India cannot do better, and cannot wish for better, than to be tied to the apron strings of Britain. The link of the rupee to sterling on 1s. 6d. basis is due to this conviction. We have not the slightest doubt in our mind that this is a grievous error. The status of sterling is altogether different from the status of the rupee. Sterling is the currency of a creditor country, the rupee is the currency of a debtor country. This fundamental difference is forgotten by those who believe that by the rupee following the fortunes of sterling, the monetary problems of India will be suitably and satisfactorily solved. It is, again and again, pointed out to us that India's prosperity is bound up with Britain's properity. On the other hand, we have, again and again, pointed out that it is Britain's prosperity that is bound up with India's prosperity. Be this as it may, the more buoyant outlook and the brighter sentiment, that have prevailed In London at the termination of the old year and the commencement of the new, have, as is to be expected, engendered a like feeling though not of a like degree in India. We would, therefore, like to scan the horizon and see if, for this subdued optimism, there can be any the slightest measure of warrant. In so viewing the monetary and trade situation at the opening of 1934, a few favourable factors press themselves on our attention. Whether these favourable factors are only of a transitory character or are likely to prove to be of permanent value, only time will show. Meantime, in the spirit of being grateful for small mercies, we may record, as bullish points, the rise of Rs. 2 in jute in the last two or three days, the conclusion of the negotiations between the Indian Government and Japan, the resultant rise of over five points in cotton, the considerable strengthening of the feeling in the exchange market, the healthier tone that prevails in hessians and gunny, and the advance in giltedge values both in India and London.

At this time of the year, it is customary to raise a discussion on what the budget is likely to turn out to be. Elsewhere in this issue, Budget Prospects have been analysed in some detail; but, in that survey, attention is confined to the questions pertaining to surplus or deficit and to the possibilities or otherwise of fresh taxation. It would be appropriate to this column if a study is made here of the prospects of the ways and means budget for 1934-35.

The ways and means budget for 1933-34 has been marked by smooth working. Considering that the capital programme of the railways, though slightly increased, has not yet reached dimensions big enough to exceed the surplus of the amount transferred to the Railway Depreciation Fund over withdrawal *plus* accruals in various other funds, and considering that the possibilities for the use of new money are still strictly limited, we feel that there could be no necessity for any cash loan in 1934-35. The Government will not have to come into the market for any new money. The loan operations of the next financial year would be confined to conversion operations. Even in regard to conversion, there has been considerable lightening of the responsibility in this regard by virtue of the operations put through in the current year. We should, therefore, think that there need be no cash loan and that the conversion loan also would be of a manageable size. This constitutes a bullish factor in the giltedge situation. While the Government will not be coming into the market for any fresh money, the accruals in the funds held by insurance companies, trusts and other investors who have a partiality for giltedge would continue to be of the order of Rs. 20 crores per annum. The scope for new investment remains the same but the new investment available will be very little. That is, those who wish to make fresh investment will have to pick up existing securities. This should cause a substantial enquiry for giltedge and result in an appreciable rise. With such a rise in securities, the borrowing rate of the Government should show further decline. The ways and means position in London continues extremely favourable. The cash balance of the Secretary of State is more than ample for current requirements. The remittances made to the India office up-to-date are in excess of the budget extimates by £2 million. By the end of the year, the excess of remittances may be anything like £10 million. The surplus borrowing in the London market is £6 million. This means that the new financial year will see the Secretary of State having an opening balance of well over £15 million. So strong a cash position should result in a strong market for India sterling loans. The outlook for rupee securities as well as sterling securities is, therefore, extremely favourable. We do not anticipate any difficulties in the ways and means budget of the Government for 1934-35. We have, however, to qualify our optimism by adding that our view of the future is based on the distinct understanding that the Finance Department would not repeat the bunglings of the last Spring. If only the Government follow a scientific and wholesome credit policy, the ways and means position of the Treasury should continue, throughout 1934-35, to be as favourable as it has been in 1933-34.

Credits have been considerably easier after the opening of the year, though they are still none too easy. The stringency experienced at the year-end for balance sheet purposes has passed. But this is all that can be said. Money still continues to be extremely usable. In the earlier days of the week business was done at $1\frac{1}{4}$ per cent., but supplies were scarce on Thursday when as high as 2 per cent. was paid. The policy of increasing the discount on three months Treasury Bills received further emphasis in the current week. That the higher rates paid for Treasury Bills are due to sentimental causes and not to any change in the intrinsic conditions of the money market is borne out by a study of the statement of the Imperial Bank. Government securities amount to the amazing total of Rs. $47\frac{1}{2}$ crores to which must be added the ways and means advance of Rs. $1\frac{1}{2}$ crores of which the Government have availed themselves. As against such colossal locking up of funds in government securities or advances to the Government, loans and advances to the market come to a meagre Rs. 21.4 crores. Herein is ample testimony that trade demand continues as sluggish as ever. The policy of the Government in easily agreeing to pay higher rates for Treasury Bills is connected with the apprehensions that were once held as regards exchange. In the current week, however, the rupee-rate was very steady with a firmish undertone. Possibly this was due, in a large measure, to cotton bills emerging in Bombay. The Western Capital was sellers of forward T.T. and Calcutta has been buying on that market. There have been no export bills in Clive Street. Merchants werre standing out for 1s. 6 1/8d., but though some banks have been willing to buy at these rates, scarcely any business is possible on this basis.

The closing rates are: 1s. 6 1/32d., January-February 15, T.T.; 1s. 6d. February-March T.T.; 1s. 5 31/32d., April-May T.T.; and 1s. 5 15/16d., for T.T. onwards.

Bills may be quoted: 1s. 6 5/32d., January, 1s. 6 1/8d., February-March; and 1s. 6 3/32d., April-May. *Bills could be placed, possibly, a shade lower.*

Money was somewhat easy in the earlier days of the week but firmed up on Thursday. The rate advanced from $1\frac{1}{4}$ per cent. to 2 per cent. for inter-bank money. The quotable rate was $\frac{3}{4}$ per cent. for Frm's call and three day's notice money; one-monuth deposit quoted $1\frac{3}{4}$ per cent., twomonth deposit; 2 per cent. and threemonth $2\frac{1}{4}$ per cent.

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

,,	3	...	5.14¾	82.71	127s. 6d.

Though the fortnight which falls to be chronicled now was a period of holidaying for businessmen all over the world and one should, therefore, expect little of momentous developments, it has not been altogether eventless. The New Year has taken on its full heritage of uncertainties in international finance. And the last fortnight has done little to minimise them. The international exchanges continue to witness the disturbing fluctuations. During the last week, the sterling-dollar rate has shown a decidedly upward tendency and the pound has fallen from 83.50 to 82.71 francs. It need hardly be added that there has been a corresponding increase in the sterling price of gold during this period. It should be easy enough to detect that the range of fluctuations has been limited and that, if the present position could be followed before long by some understanding amongst the financial Powers, the New Year might hold good auguries for the future.

It is interesting to note in this context the able analysis of the course of the Recovery Programme in America by Sir Walter Layton, the Editor of the *Economist*. Sir Walter distinguishes three different phases in the campaign which Mr. Roosevelt has conducted since his advent at the White House. Unlike most English economists and politicians, Sir Walter concedes Mr. Roosevelt his due meed of credit for contriving to do some splendid things and creating a new sense of confidence throughout America. And if the report, on which this reference is based has done justice to Sir Walter, it would seem that he finds nothing to regret in the course of American economic policy in the past few months. The first stage, according to Sir Walter, is that in which prices were sought to be taken up by taking down the dollar. He points out that to some extent it had worked but it was accompanied by active speculation and ran far ahead of events. The second phase was associated with the National Recovery Act and the attempt to produce the conditions precedent to economic prosperity, namely, the expansion of employment and purchasing power through increase in wages and reduction of working hours. And Sir Walter adds that "It naturally ran into a difficulty in connection with an increase in costs and produced inevitable setbacks." The third phase is notable for its gold purchase policy. One could easily guess what Sir Walter should have to say about the attempt to lift prices by the purchase of internally-mined gold. And he considered that, while the forces of recovery were set in operation in the early months of Mr. Roosevelt's regime, the United States would have been further on the road to recovery, if greater time and care had been taken over the National Recovery Act and if nothing whatever had been done about the gold purchase policy. In the present conditions, the surest road for the United States lies along some degree of stabilisation of the dollar which could be brought about through agreement with Great Britain.

The question, therefore, now is whether there are any signs of President Roosevelt's preparedness for such negotiations with Great Britain. It is interesting and, perhaps, highly significant that, while towards the close of November and in the first week of December there were frrequent reports of negotiations having been set afoot by the American Government with the Bank of France or the Bank of England for bringing about a degree of exchange stabilisation, the last fortnight has been singlularly free from such reports. On the other hand, the period under review is notable for the Proclamation which the American President has issued in regard to the question of America's ratification of the Silver Agreement arrived at at the World Economic Conference in London. It will be remembered that so far as the Government of India is concerned, it has already done its part in getting the Legislative Assembly to ratify the Agreement and give its provisions formal legal validity in this country. It is clearly the duty of America, from whom the inspiration for such silver agreement has always come, to implement the Agreement without further delay. With a closer knowledge of internal political conditions, it might perhaps be possible to say why this particular moment was chosen by President Roosevelt for issuing his proclamation on silver. In earlier issues we have taken the view that by the close of the year Mr. Roosevelt would have to take some definite action which would have the effect of appeasing a large section of opinion in Congress.

As the general currency and exchange policy continues to pose its insoluble conundrums, Mr. Roosevelt finds in these measures regarding silver a handy escape from the perplexing problems of the former and at the same time the means of securing the support of Congress for his persistence in experiments of recovery. There is no need for the President to be apologetic in introducing measures for the free coinage of Silver mined in America. For, it will be remembered, Congress gave its express authority in this behalf, and it might almost be said that it issued directions to the President to take specific action in regard to silver, while allowing him unquestionable discretion in other matters, concerning the gold content of the dollar or its exchange value. President Roosevelt, therefore, refers in his Proclamation to the powers granted to him in the last session of Congress and to the necessity of ratifying the London Silver Agreement which has been already put into effect by the Government of India. The proclamation is thus in accordance with an act of Congress and opens the United States mints to the coinage of standard silver coins or silver which will hereafter be produced in the United States and its possessions subject to depositors of such silver surrendering half of it as seigniorage and to cover all the usual charges and expenses. The dollars coined from half of such newly mined silver will be returned to the depositor and the other half, surrendered to the Government, will be retained by the Treasury. The annual production is 24 million ounces of silver; and for the benefit of the silver producers President Roosevelt has directed the United States mints to coin half that amount. According to the estimates of the White House, this will give a price of 64½ cents an ounce or half the legal price and will be considerably above the market price. If the silver producers exercise the right of coining their production, it will mean a coinage of 13.9 million silver dollars.

As in the case of other previous actions of the President, the world is still at a loss to know the exact significance to world markets of the measures now initiated by Mr. Roosevelt. So long as such measures are restricted to the newly-mined silver in America, it is obvious that there could be no widespread effects on the world's silver markets. It is interesting to find that, despite the restrictive scope of President Roosevelt's measures, the silver market in Bombay witnessed large bull operations on the days following the announcement of the President. The London market has been more wary in estimating the effects of the Proclamation. It is now generally understood that it would be rash to base operations on the assumption that President Roosevelt's action would have the effect of pulling up silver prices all over the world. So far as the markets in India are concerned, the reference of Mr. Roosevelt to the other nations giving free play

(*Continued on page 8*)

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,

COMMUNIQUES AND RETURNS

TREASURY BILLS

Tenders for Rs. 2½ crores of three months' Treasury Bills were opened on Tuesday, the 2nd January, 1934. Total amount offered was Rs. 2,98 lakhs. Tenders at Rs. 99-5-3 and above were accepted in full and those at Rs. 99-5-0 were allotted approximately 88 per cent. Lower tenders were rejected. Total amount accepted was Rs. 2,50 lakhs, the average rate of accepted tenders being Rs. 2-11-11 per annum.

Tenders for Rs. 2 crores of three months' Treasury Bills will be received on Tuesday, the 9th January, 1934. Successful tenderers should make payment on Friday, the 12th January, 1934. Other conditions are as usual.

Three months' intermediates sold from the 20th to the 30th December, 1933 amounted to Rs. 45¾ lakhs.

The sale of intermediates has been discontinued.

STERLING TENDERS

The Controller of the Currency notifies that on Wednesday, January 3, tenders to the amount of £1,775,000 at 1s. 6 1/16d. were received and allotted approximately 56 per cent.

On Wednesday, January 10, £1,000,000 will be offered for tender on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 30th November, 1933, amounted to £40,000,000 and was held in the following form:—

	£
Cash at short notice at the Bank of England	2,148
British Treasury Bills	14,590,185
Other British and Dominion Government Securities	14,790,333
Gold.—In England	2,152,334
In India	8,465,000
Total ...	40,000,000

(Continued from page 3)

to the forces of supply and demand has raised the speculation whether Mr. Roosevelt was not hinting at the desirability of the Indian Government removing the present import duty on silver. Granted that President Roosevelt had such an action in his mind, it still remains to consider what incentive the Government had in acting upon the suggestions of Mr. Roosevelt. But the manner in which the suggestion has been made has set active minds in the market thinking and for the moment it is naturally a matter of great interest in the bazar.

Whatever might be said of the practical value of the action of President Roosevelt to the silver markets and world economy, it is certain from all reports that President Roosevelt has caught the imagination of enthusiasts in the cause of silver like Senator Pittman. Senator Pittman has welcomed it as an appropriate Christmas present; and he for his part is "confident that Canada, Australia, Mexico and Peru would act similarly and that the increased value of silver would increase the exchange value of those countries to the same extent as their buying capacity which will aid in the raising of commodity prices and has done greatly towards the United States recovery and hastening the return to normal." The rhetorical exaggeration of this statement is obvious. But for the present and for those who believe in the essential soundness of President Roosevelt's recovery plan, it should suffice that this action will secure for the President the support of the silver enthusiasts in Congress and ensure for him a free hand in his further experiments.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 4, 1934.

Opening after the holidays the market has ruled very steady and the optimism that was noticeable towards the close of the 1933 has been prominently visible at the opening of the New Year. Stocks as well as commodities have shown a very healthy tone and there has been a nett rise in values in all of them. Government paper has ruled very steady, 3½% changing hands as high as Rs. 83-4, Jute shares were very steady and Howrahs came to deal up to Rs. 51-8. Coals were well maintained with a fair amount of business passing. Teas was the only section which was rather easy. Sugars were comparatively better and the Miscellaneous section on the whole was showing improvement.

3½% touched Rs. 83-4 on better London advices and interest being shown by speculators on the rumours that Government of India is likely to float a new loan at 3½%. The tone of the market is very steady. It must however be remembered that there has been a rise of Re. 1-4 in 3½% paper while the rise in case of 1960-70 and 1947-50 has not been more than 10 annas. Unless the latter moves up the former will see a reaction.

In sympathy with the jute goods market, jute shares have ruled very steady Howrahs changing hands up to Rs. 51-8. Kamarhattys improved to Rs. 530. There was a good enquiry for Belvedere up to Rs. 345 and Deltas up to Rs. 342, Clive and National were well sought for and marked up to Rs. 27 and Rs. 22-4 respectively.

A steady tone prevailed in Coals though the actual business passing was not very large. Burrakurs were done up to Rs. 15 and Amalgamated at Rs. 14-8 ex-dividend. Bengal were dealt in at Rs. 247 and Standard at Rs. 31-14.

There were more sellers in tea shares but the list of transaction was after all small. Bishwanath was dealt in at Rs. 26 and Hattikhira had sellers at Rs. 21-2. Pussimbing were however in good enquiry up to Rs. 8, Eastern Cachar changing hands at Rs. 11.

THE MADRAS STOCK EXCHANGE

(*By Wire*)

(From Our Correspondent)

Madras, January 4, 1934.

The securities market after the re-opening, opened strong and improved considerably on firm sterling advices. 3½% Paper gained nearly Re. 1 in two days while 4% 1960-70 loan and 1947-50 loan also rose. There was a good enquiry noticeable for most of the short and medium dated securities with sellers scarce. A large business was completed in paper 4% 1960-70 and the medium dated loans. Amongst Mysore loans, 4% met with business at Rs. 100-4 and 5% at Rs. 113-4 and 6¼% at Rs. 115-8. Cochin loan again changed hands at Rs. 103. Buyers of Madras Corporation Debentures continued strong but in the absence of sellers no business was possible. Joint stock company debentures were neglected whilst the Preference share market was active. A feature of the Market was the substantial rise in Tata second preference which rose to Rs. 112-8. Buckingham and Carnatic preferences were absorbed at Rs. 137 cum-Dividend and Deccan sugars at Rs. 116. Bank shares improved. Imperial Bank fully paids had buyers at Rs. 1,240, Centrals improved to Rs. 23-14. Exceptionally State Aided Banks continued weak at previous levels. Electrics were steady but no transactions were reported. Mill shares were quiet. Buckingham and Carnatics were done at Rs. 180; Coimbatores at Rs. 50 an and Kaleeswarars at Rs. 292 with sellers over. Exceptionally Madras were wanted at Rs. 31-8 with nothing offering; Cement shares were dull with shares freely on offer; Tea market was firm, Periakaramalais were done at Rs. 35 and Peermades at Rs. 22-8; Highland produce shares were taken up at Rs. 14-8 and United Nilgris Rs. 93 with buyers over in each case. Rubbers were steady but more enquiry was noticeable at the close. The Miscellaneous section was dull.

BOMBAY STOCK EXCHANGE

(*By Wire*)

(From our Correspondent.)

Bombay, January 4, 1934.

Securities.—Giltedged securities evinced a very steady tone with an upward tendency. 3½ per cent. Government Loan opened firm on Tuesday at Rs. 82-5, the previous closing rate being Rs. 81-11 on December 22. It touched lowest, during the period, at Rs. 82-2 on Tuesday, highest at Rs. 83-9-6 to-day and closed at Rs. 83-5. The advance was due to the stimulating advices from London and heavy purchases by prominent brokers on Calcutta account.

Shares—The re-opening of the Bombay Stock Exchange on Tuesday was hailed with brisk alround buying advance in securities giving impetus to it. Wednesday's session was rather two-sided, and bears seemed active as confidence in higher prices appeared to be waning. But cheering news about India reaching an agreement with Japanese Trade delegates again imparted firmness to the market on Thursday. The local textile industry is however badly languishing and it may be questioned now: Can Japanese Agreement help it, apart from temporary rise in cotton rates? Tata Steels, cement shares and Bombay Burma continue to rule firm and big power shares have shown appreciable strength. The following table will give a better idea of price movements:

	Close on 22-12-33			Close on 4-1-34

JUTE AND JUTE GOODS

JUTE.

Calcutta, Jan. 4.

Since reporting last the market has ruled very steady and there has been a rise in values all round. Buyers have shown more interest at rising prices while sellers are fully reserved. The possibility of a rise hinted at during the previous reports has been fully realised and the tone of the market is fully steady with possibility of a further rise in near future. The lowest of May Futures was Rs. 29-4. Business in ready firsts was done at Rs. 26.8 and Rs. 27 while January had sellers at Rs. 27-8. Mills have paid Rs. 4-10 and Rs. 4-2 for supervised Jat LR and XLR sellers however were fully reserved towards the close.

JUTE MANUFACTURES

The market during the period under review has ruled fully steady with an all round advance in values Hessians nine porter ready has changed hand at Rs. 9-12 and elevens at Rs. 12, a fair business has been done from mills principally in eleven porters, January to September at Rs. 12, Heavy goods markets has also ruled very steady. Business in B. Twills for positions near and forward has been done at Rs. 24, Liverpools have changed hands at Rs. 26-12 and Sacks ready at Rs. 23-8 and Cubans at Rs. 27-8.

The export of hessians during December has been little over 9 crore yards and consequently the stocks in India have been further slightly reduced. The question of opening 5 per cent. hessian looms was reported to have again brought for consideration before the committe of the Indian Jute Mills Association. It is reputed that nothing has been definitely decided and no change is contemplated at the moment.

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From our correspondent)

Bombay, January 4, 1934.

During the period some advance was recorded in American prices due to signs of improvement in general business conditions, New York May rate coming up from 10.42 to 10.56, after touching 10.74. But the failure of President Roosevelt to make any clarification of currency problem produced keen disappointment yesterday. Locally however, Broach rate has soared up from 180 to 190 after touching 193 due to cheering news of India reaching an agreement with Japan.

Since reporting last the Cotton market has ruled steady Broach April-May touching Rs. 193. In the earlier stage the rise was caused by bear covering on the news of reduction plan bring approved by President Roosevelt. Later on the news received from Delhi showed that Japan has accepted Indias terms and that the agreement is likely to be signed in the course of this week. Consequently the ban on imports of Indian Cotton by Japan is likely to be lifted and Japan buying might resume very soon.

As shown in previous reports Japanese takings of Cotton this season has been practically nil, while she has purchased about two lacs of bales more from America, Turkey and Egypt in place of Indian Cotton. Thus it should not be considered that Japan is starving in absence of her purchases of Indian Cotton. But at the same time it must be borne in mind that Indian Cotton is the cheapest which Japan could buy. Consequently the purchases on Japanese account, in spite of her replacements from other countries will be considerable and go a long way in supporting the Indian Cotton market.

According to the All-India Cotton forecast the increase in production is estimated to be 9%, over the last year, but the fact was long before discounted by the market, and had practically no effect whatever.

Amongst the encouraging features in Cotton the quality of Egyptian Cotton being poor this season was also one. The spinners having rejected the same the buyers had to re-enter the market thus lending strength.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

BUDGET PROSPECTS

The present occasion is appropriate for a discussion of budgetary prospects. The Finance Member will be presenting his budget before the Legislative Assembly on February 28, that is, in seven weeks' time. The rough outline of the proposals is to be considered at the usual early-January meeting of the Viceroy's Executive Council to be held in Calcutta next week. What kind of story will Sir George Schuster unfold to his colleagues in the coming week?—is a question in the answering of which we have very little data to go upon. There are, however, a few outstanding features which merit attention in this context. In the first place, customs revenue has fallen far short of anticipations. For the eight months ended November 1933, the total revenue of sea and land customs (excluding salt revenue) came to Rs. 32.32 crores as compard with Rs. 35.89 crores during the same period in the last fiscal year. One could gather from this that the total deterioration under this head for the full twelve-month period may be anything like Rs. 5 crores. In the second place, there is a windfall of Rs. 2 crores in the way of the contribution of the British War Office towards Army expenditure in India as a result of the findings of the Capitation Tribunal. In the third place, there is no justification for hoping that the income tax receipts would have come up to expectations. There may be a short fall of Rs. ½ crore in this regard.

* * *

In the fourth place, the interest charges might show some saving as Treasury Bills borrowings have been at fairly favourable rates for nearly eight months of the year. It is true that, in recent weeks, there has been a tendency for a sharp rise in the yield that has to be offered for attracting short-term money. In any case, it is possible to infer that the actual charges on account of interest in respect of the floating debt may prove to be much less than budgetted for. On the other hand, the long-term loans issued in this year exceed budget provision by anything like Rs. 10 crores. In arriving at this excess, we have taken into account both sterling and rupee loans. This means that, for a portion of the year, interest has had to be paid, over and above budget provision, on a sum of about Rs. 10 crores. Another factor to be considered in this connection is that the income from the securities held in the Paper Currency Reserve and the Gold Standard Reserve should make a poor showing owing to the low rates forthcoming on short-term investments in England as well as on Treasury Bills in India. Taking all these factors into consideration, it seems to us that the position in regard to interest charges and receipts from currency would be that there is a worsening of, say, Rs. ½ crore. In the fifth place, the railways could not have reached a position in which they could make a contribution to the general revenue. There is, doubtless, an improvement of nearly Rs. 1 crore in the gross earnings of railways. But, despite this improvement, the stage could not have been reached when the railways could resume even partial payment of their contribution to the central government.

* * *

On a full study of these factors, the conclusion emerges that the revised budget for 1933-34 should show a worsening of the position by at least Rs. 4 crores. In introducing the budget on February 28, 1933, Sir George Schuster provided for a revenue of Rs. 124.35 crores and an expenditure of Rs. 124.10 crores, leaving a surplus of Rs. 25 lakhs. The story to be unfolded in regard to the revised budget for 1933-34 would be that the surplus of Rs. 25 lakhs would be converted into an anticipated deficit of Rs. 3¾ crores. It should be clear from this that there was unseemly haste on the part of the Government to effect, in the last budget, a partial restoration of the cut in salaries. Another conclusion which we have to draw from these facts is that while gold exports have, in a number of direct and indirect ways, resulted in the magical transformation of the ways and means position of the Government, the budgetary position continues serious. Because of the reduction in the floating debt, the lower borrowing rate, the plentiful balances made available to the Secretary of State and the freedom from embarrassment in regard to exchange obligations, there has been a tendency on the part of the financial authorities to lull themselves into a sense of false security. The emergence of a substantial deficit as we have envisaged should give them a rude shock. So far as we are concerned, we may repeat that the budgetary position shows the distress of the population of the country and that this very distress is responsible for exports of gold which account for the satisfactory ways and means position. In other words, the unfavourable budgetary position and the favourable ways and means position are both due to the same cause, namely, country-wide economic distress.

* * *

Yet another inference from the study we have made is that the increases in taxes announced in the emergency budget of September, 1931 were on a most unscientific basis. In some cases, the increase has, far from resulting in any higher revenue, only accounted for the operation of the Law of Diminishing Returns. Our taxation system is unscientific enough in all conscience. But the pilings-up, that have been recurrently done in recent years, have made it unscientific beyond description. The lesson of these experiences is that expansion of revenue should be secured not by stiffening the incidence of the existing taxes but by discovering new avenues of taxation. This question was posed by Sir Walter Layton in his memorandum prepared for the Simon Commission. But nothing further has been heard of it. The time has arrived when a scientific study of the taxation system in India should be made. We may be told that such a study was made by the Taxation Enquiry Committee and that Sir Walter had also indicated some of the broad principles in this regard. What is, therefore, needed is not a mere examination by a committee or otherwise, but a resolute attempt to replan the taxes in a way that conforms to the accepted canons of taxation. This matter is relevant in considering the budget for 1934-35 which the Finance Member will have to announce in the next month.

* * *

This is the last year, according to present arrangements, of his stewardship of India's finances. Will he be content to take the line of least resistance and make a few minor changes here and there, leaving the problem to be tackled in its entirety by his successor? Or will he, realising that his emergency plan has failed, undertake a revision and readjustment with a view to ensure satisfactory revenue producing capacity in respect of the various taxes? On the answer to these questions will depend the trend and nature of the budget proposals for the coming year. Sir George will be erring on the side of undue optimism if, on the basis of existing taxes, he budgets for improved income in the next year. Measured by whatever criterion, the economic condition of the country has not improved in any way; the yields from taxes could not show any expansion, so long as there is no appreciable change for the better in the national economy. In simple terms, Sir George will have to budget for the same measure of deficit that he finds himself faced with in the revised budget. If so, how will he seek to bridge the gulf? Will he make readjustments among existing taxes or will he have recourse to new kinds of taxes? Or—yes, there is another alternative—will he merely stiffen up the rates? We would like him to show daring and courage and chalk out new lines. More than three years ago, Sir George suggested the appointment of a committee for studying the possibilities of tobacco and match monopolies and of death duties. He has made no move in this direction. There is not enough time to have these questions gone into by a committee if any of these sources is to be tapped in the coming budget. We know that an officer was placed on special duty to study the relevant facts in regard to tobacco. We do believe that the Finance Department have enough facts in their possession to take some sort of action whereby a handsome revenue could be secured from this source.

* * *

We may now summarise our conclusions:

1. The revised budget estimate for 1933-34 would show a worsening of the position by Rs. 3¾ crores.
2. The budget estimate for 1934-35 should, on the basis of existing taxes, disclose a similar deficit.
3. For the filling-in of the gap, new avenues of revenue should be explored.
4. At the same time, considerable readjustment of existing taxes would be necessary in order to make sure that increased taxes have not resulted in merely diminishing returns.

INDO-JAPANESE TRADE AGREEMENT

The sharp and swift turns of the kaleidoscope of Indo-Japanese trade negotiations have at last come to an end. Reports are quite conclusive that an agreement has been reached between the two delegations on all the major points and that it only remains to draft the terms of the final treaty. This, we are told, will be done while Sir Joseph Bhore is on his flying visit to Calcutta. The conflict of interests in either country has been resolved and each government has felt itself to go forward in the task of putting the commercial relations of the two countries on a definite, though necessarily tentative, basis. Looking over the bewildering past of the Indo-Japanese negotiations since they were first initiated in September last, the first feeling is naturally one of relief that the harrowing uncertainties have at last been drawn to an end. At more than one stage, the public was inclined to wonder whether the parties will not be forced to throw the whole game in sheer disgust leaving the commercial rivals to fight to the finish, each resorting to the weapons it can lay hands on. On the side of the Government of India, the material point to which it chose to stick from beginning to end was that Japan's right to participate in the piecegoods market in India must be coupled with her obligation to buy Indian cotton. This attitude, understandable enough in normal conditions, became an absolute necessity in view of the relentless boycott of Indian cotton which Japan declared as soon as there was the first sign of strain in Indo-Japanese commercial relations. Considering that Japan has always been, except during the period of the boycott, a valued customer for India's cotton and that India's cotton has been available to her on economic terms, it is difficult to understand how the vexatious vicissitudes of the Delhi negotiations should have been almost exclusively over this point. At no stage during these protracted negotiations did the question of Japan's imports of other articles into India figure to any considerable extent. And it was nearly two months ago when the first report appeared that the linking of Japanese imports of piecegoods into India with the latter's exports of cotton to the former was assented to in principle by the Japanese Government. The subsequent turns in the fortunes of this agreement have thus been due to the reported recalcitrance of the Japanese spinners to have their hands tied in respect of their purchases of raw cotton. It has been suggested that the Japanese Government have experienced considerable difficulty in persuading the cotton industry to assent to Japan incurring the obligation to buy Indian cotton in return for participation in our piecegoods market. We have found it difficult to give full credence to this report. And we might say that to the end, there has been nothing to persuade or to convince us that the chief difficulty in the way of the Japanese Government closing the bargain with the Indian was the recalcitrance of the Osaka spinners.

* * *

Considering that the news of the final agreement has come so hard on the heels of the Amendment to the Tariff Bill and the consent of the Government of India to according most-favoured nation treatment to Japan in respect of her imports other than piecegoods, it would seem that Japan had been playing for time for this question to crop up of its own accord without being deliberately put forward by herself. And the Indian Government too possibly thought that the only way of forcing the hands of Japan in this matter was to clarify its plans and intentions in respect of safeguarding the minor industries from the competition of Japanese products. Thus the amendment to the Tariff Bill whatever may be said about it otherwise has enabled the termnation of these protracted negotiations. It is natural that, as soon as the intention of the Government of India to protect minor industries from the competition of Japan and other countries with depreciated currencies was made known, there was a serious flutter in Japan over it and threats were issued that the Japanese delegation would be withdrawn and the negotiations abandoned altogether. Japan's resentment against the amendment to the tariff was staged with efficient throughness; but none in India made the mistake of believing that Japan was going to throw overboard all her patient efforts

CALCUTTA,
The 29th December, 1933.

to regularise her commercial relations with India; and it did not take long for the public to find that the amendment to the tariff, far from being unwelcome as a fresh attack upon Japan's foothold in the India's import markets, should have been regarded with relief as a means of setting more than one outstanding question.

* * *

The upshot of all these is that Japan has been enabled to secure from the Government of India most-favoured-nation treatment in regard to her imports into India other than piecegoods and, at the same time, a valuable share of the quota of India's imports of piecegoods. As we have emphasised more than once, Japan could at no time have thought it feasible to secure a right of importing piecegoods into India without conceding to her the right to export the raw material which she has clearly in excess of her present needs. Excepting for the provision that India agrees to grant to Japan most-favoured nation treatment under which no discriminatory tariff will be imposed against Japan, the agreement is confined to the cotton trade. Under the agreement Japan agrees to buy 1 million cotton bales in turn for exporting to India 325 million yards of cotton piecegoods; but she can export 400 million yards by buying a further 500,000 cotton bales. It is also provided for that any year's excess purchase of cotton will be credited to the following year. The agreement imposes no obligation on Japan to buy any minimum number of cotton bales if her exports to India do not exceed 125 million yards. Japanese piecegoods imports are to be regulated on the following basis: 45 per cent. of imported piecegoods will be grey goods, 34 per cent. coloured goods, 13 per cent. bordered grey and 8 per cent. bleached goods. For the purpose of smooth operation of the trades, slight variations are provided for being 10 per cent. in the case of the grey and coloured categories and 29 per cent. in the case of the bordered grey or bleached goods varieties. It is hardly necessary to add that such variation under one head must be compensated in the imports on any other head, so that the total imports of piecegoods do not exceed the quota assigned. It is difficult to estimate the significance of the provision which allows Japan to export 125 million yards of cotton cloth to India without any corresponding obligation to buy Indian cotton. Probably when the full papers connected with the negotiations are issued to the public, one will get at length all the ideas underlying this provisions. Practically speaking, the fact that during the period of the boycott Japan has been obliged to buy American cotton dearly shows that there would be no incentive for Japan to exercise her rights under this provision. The necessity of Japan to import to India much more than 125 million yards is unquestionable; and there is no reason why the provisions which link Japan's imports of piecegoods into India with imports of cotton from India should not work smoothly during this perid.

* * *

The Indo-Japanese trade agreement in regard to Japanese imports into India other than piecegoods will be the subject of enquiry in a separate article. Here it should suffice that the Japanese delegation has been content to ensure that India will take no specially discriminatory measures against herself. In response to the representations of the Japanese delegation that the new duties will hit Japanese trade very hard amounting as they do in certain lines like porcelain and pencils to as much as 500 per cent., it has been conceded that the immediate specific duties should apply to all countries liable to the standard import duties.

* * *

Taking the agreement as a whole, it should be easy to detect that, expecting for the insistence on Japan buying Indian cotton in some rough proportion to her imports of piecegoods into India, it is Japan that has scored on every point at issue. The duty on Japanese imports has been reduced from 75 per cent. to 50 per cent. The Government have, it is understood, undertaken not to penalise Japanese goods further through the present position of the yen and the only variation in the duty which might take palce would be based on any decreased valuation of goods through the further depreciation of the yen. It would seem that the Government of India have finally made up their minds that the protection to the Indian cotton industry and the health of the piecegoods market in India should be sought rather through the maintenance of the quota system than through a mere increase in duties corresponding to the depreciation in the yen. Considering the varied tactics which Japan has adopted in the past in pushing her piecegoods trade in India, no one can gainsay the wisdom of regulating Japanese imports through the quota system rather than thorugh various devices none of which Japan has proved herself incapable of surmounting. According to an *Associated Press* message, the Japanese hope to take full advantage of the quota by importing into India 400 million yards of piecegoods and this means that she would have to buy 1,500,000 bales of Indian cotton. On this basis, the trade between Japan and India would be unbalanced in favour of the latter and the balance can be restored only if Japan is able to compensate herself by the imports of sundry goods. Here she has been obliged to recognise India's policy to safeguard and protect her industries, though whenever any duties are imposed against Japanese goods which work harshly the Japanese can make representations through the usual diplomatic channels showing how, consistent with India's protective or safeguarding policy, the tariffs might be modified.

* * *

As we have said, the first gain of the Indo-Japanese trade agreement is the removal of the uncertainties. Secondly, it has been repeatedly asserted by the news agencies that the lifting of the Japanese boycott against Indian cotton is a foregone conclusion and that the Osaka spinners will soon pass a resolution to that effect. On the strength of these reports Bombay cotton has been a strong market and prices have risen by nearly Rs. 3. In the present condition of India's agriculturists it is certainly no small gain that one of the valued customers of Indian cotton has at last been reclaimed. The Government of India will also have a free hand in dealing with the question of protection for minor

CALCUTTA,
The 29th December, 1933.

industries except for the restriction that there would be no discriminatory action against Japan. Though this might involve the necessity of hitting other importers besides Japan in our efforts to protect the indigeneous industries, there is nothing in the Indo-Japanese Trade Agreement which disables the Government in its task of affording succour to the Indian Industries.

* * *

There is one serious omission of the Indo-Japanese trade agreement, which has not yet attracted the attention of the press or the public. From our summary of the provisions, it will be seen that no attention has been paid to the position of the cotton spinning industry or its needs in respect of competition from abroad. It should need no elaborate argumentation or any array of figures to show that the spinners in India have been exposed to the same dangers as the weavers. And yet no attention has been paid to their special needs. As ever the pride has gone to the most vociferous clamourers. But one should expect the Indian weaving industry to recognise that the continued import of cheap yearns would be a danger not only to the spinners but also to themselves, as weaving mills or handlooms using cheap imported yarn would become formidable competitors. We deem it necessary to urge that, the Government will take immediate steps to ensure that the spinning industry is afforded adequate safeguards. The matter brooks no delay.

* * *

By all tokens, the Agreement arrived at between India and Japan at Delhi has an international significance, equal to if not in excess of, its significance for the two countries directly concerned. Lancashire is in exultation over the fact that the Agreement has at last been concluded. We have from the outset taken the view that the Indo-Japanese trade negotiations have been taken up by the Government of India primarily at the instance of the Secretary of State and the relief that is now shown in Lancashire at the conclusion of the negotiations is proof positive that Great Britain attaches immense importance to the settlement of the outstanding commercial issues between the two counries of the Far East. We might venture to suggest that during these negotiations Japan felt her hands considerably strengthened by the knowledge that the British Government would not countenance the failure of the negotiations and would insist on some kind of agreement being arrived at. On no other basis is it possible to explain the fact that during all these months Japan had at more than one stage brought the negotiations to the verge of collapse without any fear that the relations might snap altogether. It is not impossible that if Japan had not been strengthened by this knowledge and if the British Government had disguised their anxiety for a successful termination of the agreement, Sir Joseph Bhore wohld have been able to secure far better terms than he has done now. It is not irrelevant to remark here that this is only another instance, only too numerous of late, of the Secretary of State's intervention in matters which should be legitimately considered as the exclusive concern of the Government of India.

TARIFF AMENDMENT BILL

The Tariff Amendment Bill introduced in the Legislative Assembly by Sir Joseph Bhore represents a belated attempt on the part of the Government of India to afford protection to those small industries which have been severely affected by the import of goods from countries that depreciated currencies. As the statement of object and reasons itself points out "during the past year certain Indian industries which under normal conditions could not fulfill the conditions prescribed by the Indian Fiscal Commission for grant of substantive protection have been subject to competition of an exceptional nature, which has proved a menace to their continual existence." It will be remembered that early last year the Associated Chambers of Commerce passed a resolution calling upon the Government to take measures to ensure the preservation and progress of minor industries affected by the competition of countries with depreciated currencies. The demand was re-iterated by the Federation of Indian Chambers of Commerce and ultimately the Government passed the Safeguarding of Industries Act which empowered the Executive to take action in this regard as and when they deem it necessary. It is now explained that the Government have not taken action on the safeguarding of Industries Act which they could have "in view of the fact that under the law they would have to discriminate against certain countries." It is observed therefore that for the present the Safeguarding Law is a dead letter but it is emphasised at the same time that the latter exists for use as an emergency measure. The

Government have now decided to afford the necessary protection by levying minimum specific duties on the goods which threaten unfair competition to the indigenous products. In fixing the levels of minimum specific duties the Government have kept in mind the necessity of adequately safeguarding the Indian industries concerned and the desirability by avoiding in so far as it may be possible any increase in the *ad valorem* incidence to duties on goods the competition from which does not constitute a danger to Indian industries. In some cases covered by the Tariff Bill *ad valorem* duties will remain unchanged but the minimum specific duties have been fixed as an alternative so that protection from unfair competition could be ensured for Indian industries without going elaborately into the question of the causes why a particular country is able to sell goods cheap. The principal provisions of the Bill which will take immediate effect are as hereunder:

* * *

The occasion has been also taken to include fish oil and sugarcandy in the list of industries requiring safeguarding.

Woollen hosiery and piecegoods will be charged 35 per cent. or eighteen annas per pound whichever is higher, while woollen mixtures will be charged 35 per cent.; cotton undervests, 25 per cent. or Rs. 1-8 per dozen, whichever is higher; cotton socks and stockings 25 per cent. or ten annas a dozen, whichever is higher; heavy chemicals, magnesium chloride, Rs. 1-5 per cwt. or 25 per cent. *ad valoren*, whichever is higher; tiles or earthenware and porcelain will be charged 30 per cent. or two annas a square foot, whichever is higher.

The provisions of the Bill are inclusive of surcharges, wherever surcharge is leviable under the present law.

Among the articles, covered by the Bill may be mentioned the following:—

All fents namely, defective piecegoods will be charged 75 per cent., the same as cotton piecegoods. This has been done for revenue purposes, because the import under this head has immensely increased.

Silk and artificial mixtures will be charged 50 per cent. instead of 35 per cent., as there has been a considerable increase in imports under this head.

Umbrellas have been separated from parasols and will be charged 30 per cent., or eight annas each, whichever is higher.

Boots and shoes will be charged 25 per cent. or six annas per pair and uppers of boots and shoes will be charged 25 per cent. or three annas.

Toilet soap will be charged 35 per cent. or Rs. 20 per cwt., whichever is higher.

Fish oil will be charged Rs. 10 per cwt., and sugarcandy Rs. 10-8 per cwt.

* * *

The significance of the proposed changes to the industries concerned has been examined at length by Mr. Ramsay Scott who represents the U.P. European constituency in the Assembly in an interview to the Press. It will be remembered that Mr. Scott contributed a highly illuminating article to *Indian Finance* some time ago pointing to the devices which Japan has adopted to protect her industrial supremacy. Mr. Scott has justly enjoyed a reputation for examining these questions in a purely objective way and it is his considered opinion that to the Bill introduced in the Assembly to amend the Tariff Act is not likely to achieve its objects of protecting Indian industries and of not unduly restricting the imports of foreign nations other than Japan. One might say that the excuse which the Government have offered for not taking action under the safeguarding of Industries Act and for resorting to the present method of specific duties is halting. The Safeguarding of Industries Act was specially designed for this purpose and action under the Act would have enabled the Government to levy duties which would have the avowed effect of safeguarding the Indian industries and discriminating without any fear of imports from nations with which we have had no trouble. It is possible that in drafting its terms the Government have borne in mind the possibility of having to accommodate Japanese opinion and eliminating discrimination. As Mr. Scott points out, the new duties have been based on a false premise namely imports of 1931. In the year imports of Japan were not excessive and they were so little in volume that their low prices could have no appreciable effect on the market as a whole. Mr. Scott's examination of the probable effects of the Bill to the textile and other industries bear reproduction:

* * *

"The specific duty on undervests is Rs. 1-8 per dozen. In 1931 Japanese imports were Rs. 2-11 per dozen, in 1932 Rs. 2-5-6 and in 1933 Rs. 1-13-2. Those of other countries were priced at Rs. 6-4-6, Rs. 3-0-10 and Rs. 5-14, respectively. The cost of a popular line manufactured in India from Indian cotton is Rs. 4-11 per dozen. It follows that Japan will be able to import her Rs. 2 quality plus the Rs. 1-8 duty at Rs. 3-8 per dozen and still be well under the Indian cost. The specific duty on socks and stockings is 10 annas per dozen. Japanese imports in 1931 were Rs. 1-8-7 per dozen, in 1932 Rs. 1-2-6 and in 1933 Rs. 1-0-10, while those of other countries were Rs. 1-2-6, Rs. 1-8-1 and Rs. 1-11-0, respectively. Japanese imports in 1931 were 37 per cent., in 1932 46 per cent., and in 1933 75 per cent. Indian production has shrunk from 919,000 dozen in 1929 to 140,000 dozen in 1931.

* * *

"In 1931 Japanese imports of woollen piecegoods were priced at Re. 0-7-11 per yard, in 1932 Re. 0-9-8, and in 1933 Re. 0-14-1 against other countries Rs. 1-8-9, Rs. 1-4-9 and Rs. 1-12-2 per yard, respectively. Japanese imports have risen from 121,390 yards in 1931 to 1,412,661 yards in 1932 and 1,804,092 yards for the seven months of 1933, the large increases in the last 19 months being entirely due to the depreciated yen. The specific duty is 18 annas per lb., but as the bulk of Japanese goods now imported are 4 oz. and 8 oz. per yard the assistance is only 4½ annas or 9 annas per yard while manu-

This correspondence shall cease—in such curt words, editors are wont to decree that any particular controversy, which has come to embarrass or annoy them, is no longer to be pursued. I had imposed on myself some such ordinance in regard to the Reserve Bank discussions. What with my constant excursions to Simla and Delhi and what with my having had to wire my gossip from those centres, whereat the all-absorbing topic was the Reserve Bank Bill, this column had tended to become tedious and monotonous with constant harping on the same theme. Well might my readers have exclaimed : Has not Eavesdropper aught else to spin a yarn on? Is his brain fatigued? Or is this a symptom of the malaise of a monomaniac? It is fortunate for me that no correspondent has yet written in such brutal frankness. But I pride myself on being able to sense the feeling of my readers and understand their reactions to my chatter; and it is this personal link that has endowed this feature with a measure of vivacity and popularity. It is, therefore, by an instinct that I realised that, in my recurrent flogging of the horse of Reserve Bank, I was exposing myself to the charge that something was seriously wrong with my sense of proportion.

* * *

This sobering thought was responsible for brevity being the soul of wit in my year-end gossip which appeared a fortnight ago. In offering felicitations for the New Year, I was particularly anxious that I should keep clear of topics that should, before I knew, start generating heat and exciting rancour. And, I was making up the message in a week which, if I had not been extra-careful, would have lent itself through its developments to extremely pungent writing. The acutest phase of the Reserve Bank controversy was reached in the concluding days. At one stage it looked as though, instead of the Reserve Bank being the bone of contention, *Indian Finance* would become the bone of contention. Sir George Schuster referred to us as "a well-known wholesale firm of Calcutta". Mr. Ramsay Scott and Mr. Sarma were described as the middlemen who were dealing in the wares manufactured by the wholesale firm. Sir George's sarcasm was savage but quite comprehensible. I, for one, was neither surprised nor shocked nor grieved nor angered as, sitting in the gallery right opposite the Finance Member, I heard myself described as one plying an active trade in his own manufactures.

* * *

I had chosen to take an active part in all the happenings that took place behind the scenes in Delhi. I was present here, there and everywhere. I was always amidst a cluster of non-official members. I went about like a busybody in the lobby. The Treasury benches caught frequent glimpses of me in the President's gallery. There were recurrent and annoying references to *Indian Finance* and to me personally umpteen times. Was not all this enough to make me a kind of red rag to the bull? It is no business of the Editor of a paper to throw himself headlong into current controversy. He has to sit, distant and respectable, in the *sanctum scantorum* of the editorial office and speak to the public through the columns of his paper. That is the platform which etiquette and convention allow him. If he breaks the etiquette and defies the convention, he has to thank himself for such unpleasant consequences as there may be. I was fully aware of what I was letting myself in for when I threw overboard the editorial reserve and took a direct and even leading part in the intrigues and manoeuvers of the lobby. I went into it with open eyes and I was, therefore, prepared for being hit and knocked and bruised badly. But some of the members, who took Sir George's gibe to heart, did not take the same philosophical view as I did. They wanted to give it back to him with compound interest. It thus came about that during the last week of the debate, a lively and exciting controversy raged round me and my contribution to the better and more widespread appreciation of the fundamentals of the Reserve Bank scheme on the part of the legislators.

* * *

If I had, in such circumstances, dilated on this theme, I could scarcely have avoided the personal note—much less the vitriolic style. It was for this reason that I decided that I should confine myself to the greetings of the season. Nor would I have reopened this topic to-day but for insistent letters from friends urging me to give my impressions of the debate on the ratio question and on the occasion of the Third Reading of the Bill. The following is from one of the many letters received in this connection : "I do not know whether you have reviewed the Reserve Bank Bill in your paper or whether you propose to do it after Christmas. Please let me have a copy of your issue or issues dealing with this subject as I am very anxious to know your views about it". Invitations of this nature have come from friends who did me the honour of seeking my advice and following my suggestions; and as some of them were themselves roughly handled, it is meet and proper that I review the closing scenes, partly with a view to place on record a correct appreciation of the men who fought bravely despite the conviction that theirs was a lost battle, and mostly with a view to indicate what emerges from this controversy in regard to the future lines of policy and action on the part of the Government and the public so far as the Reserve Bank proposal is concerned.

Clauses 40 and 41, which related to the sale and purchase of sterling at the lower and upper points respectively, came up for discussion, somewhat unexpectedly, on the afternoon of a Saturday. It was ruled by the President that the two clauses should be taken together; and the two main amendments round which the debate centred were by Mr. Sarma and Mr. Raju. Mr. Sarma asked for the re-drafting of the clauses in a way that the legal position as regards the ratio would be left exactly as it was—neither more nor less. Mr. Raju posed the ratio problem as a straight issue for the reduction to 16d. sterling. Contrary to his usual practice, Mr. Sarma spoke from his notes and was followed by Mr. Ramsay Scott. Mr. Raju also made a brief speech. So did Mr. S. C. Mitra. Within an hour, Opposition had lost four wickets. And as it was the intention of the Opposition to arrange for voting being taken on the following Tuesday forenoon, it was a problem to find speakers for the whole of Monday. Sunday was, therefore, devoted to intense preparation. The debate on Monday was of a fairly high standard. Mr. Mody was particularly in good form. Sir Cowasjee Jehangir, who was at great pains to prove that Mr. Sarma's amendments were only a leaf from his own book, was not only ineffective but unduly apologetic. All the time he was seeking to prove that his support of Mr. Sarma's amendments was consistent with the spirit of the agreement arrived at in the London Committee on the ratio. Just before noon on Tuesday, Sir George rose to reply and spoke at great length. But I am sorry to say that while he was as lucid as ever, he made out practically no points. Nine-tenths of his speech contained no arguments; and the one-tenth which contained arguments could really be turned against him.

* * *

Then came the division. The Independent, Nationalist and Democratic parties voted *en bloc* for the amendments. But Mr. Sarma's own party did not give him the backing that he was entitled to. His somewhat crafty Leader was won over by plausible arguments and transparent flattery. The Central Party may be described as one of shreds and patches, the common point being that all members, by inclination, past association, present status and hopes for the future, can be counted on to vote for the Government in ninety-nine cases out of a hundred. The Party will act as a single unit if the party decision were to support the Government. No mandate can win loyal support if it meant walking into a lobby other than that of the Government. The Party itself was such; and the Leader was more anxious to humour the authorities than his own Pro-Leader. The amendments on the ratio clauses were, thus, defeated by the machinations of, and fissures in, the Central Party. But then no one who knew anything about Assembly politics had any business to hope that success on any question could be achieved as against the Government through the support of the Central Party. What happened was in consonance with expectations.

* * *

If there were a few who had anticipations of another kind, it was due to the fact that a nominated member like Mr. Sarma sponsored two most important amendments in the Reserve Bank Bill. Mr. Sarma was in fighting form while the ratio debate lasted. He provoked the ire of the Government benches. Sir George referred to him, disparagingly, as the nominated member seeking the applause of the Opposition. By the end of the session, however, Mr. Sarma made ample amends for his amendments. In his peroration on the ratio clauses, he narrated the story of a couple who lived near Mount Vesuvius. The couple had three children. Whenever there was a threat of eruption in Vesuvius, the children were sent to a friend who lived twenty miles off. This happened on three occasions. On the fourth occasion when Vesuvius was threatening to be on its bad behaviour, the father of the children wired to his friend saying that he would send the kids the following day and got the reply: Do not send the children but send Mount Vesuvius. Quoting the story, Mr. Sarma concluded that he was inclined to tell Sir Samuel Hoare that he might keep central responsibility in London and that India would be sending Sir George Schuster in a few months' time with the Reserve Bank Bill in his pocket. Within four days, Mr. Sarma made an equally impressive peroration in the course of his speech on the third reading of the Bill. He wished God-speed to Sir George and spoke highly of his great qualities as a man and his great achievements as a Finance Member and concluded by averring that the framer of the Reserve Bank Bill should himself be the first Governor of the Reserve Bank when it was started. I say again, this was ample amends for the amendments.

* * *

But the real point is that the tenor of Mr. Sarma's speech indicates the temper and tone of the main speeches in the third reading of the Bill. The debate was opened by Mr. Vidyasagar Pandya who uttered many home-truths to some of the front benchers who showed a greater loyalty to the London Committee than to their own Party. He spoke in great disgust of the intrigues of leaders who, occupying Opposition benches, out-Schustered Schuster. Then spoke Mr. N. N. Joshi who was far from complimentary to the Assembly members who had returned from London deliberations. The last speaker of the day was Mr. Bagat Ram Puri whose was the star performance of the special session. He rubbed it, sore and severe, into each one of those who were responsible for the defeat of almost everyone of the amendments brought in by the Opposition with a view to improve the measure. It was a tremendous speech, but extremely irritating and provocative. It was, however, necessary that someone should expose, completely and unreservedly, the tactics of those leaders who helped Sir George to carry through his Bill in just the form he wanted, and who were responsible for the Finance Member becoming emboldened to take an attitude unyielding and adamant. If the leaders had behaved as they should, Sir George would have had a far more difficult task even in the present Assembly. If the leader of the opposition and some of his immediate neighbours should go on walking into the Government lobby and making supercilious remarks against their own followers, was it a wonder that it had a most demoralising effect on the whole house? Even as it was, the Opposition was a solid block of thirty, the Democratic Party having the cleanest record. It could easily have been fifty but for this demoralising factor.

* * *

Mr. Puri did a great service by speaking, frankly and fearlessly, on those developments which resulted in the Government winning not because of their strength, but because of the disruption in the Opposition camp. Mr. Puri knew fully well that all those whom he had rubbed the wrong way would go for him when their turn came. He was not disappointed for he got back with more than *Kabuli* interest. After Mr. Puri's speech, the debate

ICE

103, Clive Street, Calcutta.

centred not round the Reserve Bank but round Mr. Puri. No better tribute could have been paid to the effectiveness and trenchant character of Puri's straight and straight forward speech. Mr. Ramaswamy Mudalier was eloquent over trifles and spoke far too much about his own honesty of conviction and his own superior understanding of the fundamentals of the Reserve Bank. Sir Cowasjee was positively unseemly and in bad taste. What he said was not a reflection on Mr. Puri but on himself. Mr. Puri has established, on a firm basis, his reputation as a fine and forceful debator. Sir Cowasjee has only shown himself as clumsy and clownish in retort.

* * *

Sir George Schuster's address in winding up the debate was fragile, light, fragrant and apt. The House did not want a long or serious speech from him. It was a most appropriate ending of a one-month session and did a great deal in the direction of applying balm to lacerated wounds. He said, in effect, that many members might feel that the Reserve Bank scheme might have been differently planned from that now decided on but appealed for co-operation in the further stages so as to ensure national control of the Bank by the shares being distributed over as large a proportion of Indians as possible. A pleasing feature of the third reading was the entire concord amongst all members including the Finance Member in the tribute that was paid by speaker after speaker to the enormous labours that Dr. Ziauddin had taken in order to present a correct and comprehensive Opposition point of view.

* * *

In this arid desert of defeated amendments, the only oasis was the acceptance of Mr. Raju's proposal to open a separate department for providing the nucleus of an organisation for catering to the special and full needs of rural interests. Mr. Raju had made a careful study of the chapter on Rural Finance in the Australian Commonwealth Bank Act; and his proposal, while based on the Australian model, took sufficient note of the local conditions and requirements of India. He effectively quoted Sir Daniel Hamilton who said that if the Reserve Bank Bill did not contain any provision for rural finance, the proper place for it was the waste paper basket. The Finance Member showed full sympathy in favour of the suggestion to open a department for rural finance but saw many practical difficulties in the acceptance of the proposal as it stood. The final compromise arrived at commits the Bank definitely to undertake all those measures necessary for an adequate service of rural interests and it should be acclaimed as the one and only feature of the special session.

* * *

I may now sum up my impressions as under :—

1. If any of the important office-bearers of a party are invited to committes of the weight and value of the London conference, they are put in a delicate situation when they have to choose a correct line between their commitments in the committee stage and the views held by the other members of the party. It seems to me that it should be definitely laid down that no front bencher should be invited to, or accept, a place on committees.

2. The Independent Party showed independence not as against the Government but as amongst the members within the party. If this party desires to retain its first place on the opposition benches, there should be a thorough overhaul amongst the office-bearers.

3. The Nationalist Party made the poorest show and has deservedly gone into liquidation.

4. The Democratic Party rendered an extremely good account of itself and it is a fine team of men with knowledge and real nationalist fervour. The aim of the party is not quaantity but quality. It is only for this reason that it has voluntarily shut itself out from the chance to the first rank in the opposition side.

5. The Yamin Khan Party has also gone to pieces and nobody would shed a tear save Sir Lancelot Graham and others of his ilk.

6. All this means that the Central Party would be considerably reinforced but its value from the point of view of nationalist policy is negligible.

7. The European group would do well to realise the need for its demonstrating its capacity for independent judgment. As it is, it is but a gramaphone of the Government. The attitude of the party in regard to the clause prescribing five years' minimum banking experience exemplified that the motto of the party is the same as the professed motto of Mr. Yamin Khan, namely, "if the Finance Member changes I change, if the Finance Member does not change I do not change." The European group has talent, organisation, efficient *personnel* and a fine sense of discipline. It should use these great attributes to better purpose than being a mere echo.

8. Considering that the Assembly is such a curious conglomeration, it is absurd that a further lease of life should have been given to it. The more honest course would have been to let the fresh elections take place in the usual course. From any point of view, there is no excuse for the continuance of the present Assembly till December, 1934. The members themselves are in great glee over this great concession and are in hopes that by this year-end, further rewards would await them for further support of Government measures. None but the members who know that they cannot return to the Assembly and none but the Government officials who wish to carry through controversial legislation through an obliging Legislature, can concur with a decision which means the continuance of an unedifying farce.

* * *

So much about the past. But the purpose, with which I set out to dictate this gossip, is less to cry over spilt milk than to indicate how best we could ensure a satisfactory suppl yof milk from the kind of cow that we have now got. The fight is at an end. Sir George Schuster has won. And I and those who stood for my view have lost. The rules of the game demand that the vanquished should acknowledge the victor and the two should confer and consult whether they cannot pull together in the work that lies ahead. It is in this spirit that I offer my congratulations to Sir George Schuster on his luck in successfully carrying through a contentious measure in an Assembly which proved much more recalcitrant than he bargained for. This is an achievement which was denied to his illustrious predecessor, Sir Basil Blackett. Whatever be the differences of opinion on the merits of the Bill between Sir George and myself, whatever be the provocation that he gave on the one or two stray occasions when he, contrary to his usual self, lost his temper, there would be complete agreement when I say that, as Chairman of the Select Committee he showed enormous patience, courtesy, indulgence and tact; and that, as the sponsor of the Bill in the Assembly, he proved himself a skilled debater and an accomplished Parliamentarian.

* * *

The Reserve Bank scheme being what it is, it may be stated, in broad terms, that the success of the Bank will depend less on the actual scheme than on the fulfilment of three definite conditions which are :

* * *

1. On the side of the Governrment, they should make the first appointments (in regard to the higher staff, the central board and local bodies) in a way that would inspire confidence in the public mind.

2. On the side of the public, the issue of shares, as and when made, should not be treated with apathy. It is up to our leaders to carry on a wide propaganda to instil in the minds of the population that

everyone who can afford it must buy at least five shares of the Reserve Bank as a matter of national duty. It is only in this way that an effective guarantee can be had for the control of the Bank being placed on a basis free from the influence of any financial caucus or vested interests.

* * *

3. On the side of the legislators, the time has arrived when the principle of specialisation should be understood in its full significance. Popular representatives in a democratic body cannot be blamed if they feel at sea when detailed questions of financial or economic importance are under discussion. The best solution would be if, from amongst the non-official members, a small council of eight to twelve members could be formed, with a view to the members so selected devoting themselves to a special study of economic proplems. It will be the duty of such a council to watch the working of the Reserve Bank and call the attention of the Assembly if and when the Reserve Bank functions in a way that is not in consonance with public interest.

* * *

I have already exceeded my space limit and, on the present occasion, I could do no more than merely enumerate the three-fold responsibilities which lie on the State, the public and the legislators respectively. I shall expatiate on these in the next issue. Meantime, I should urge that the most important of these conditions is the right choice of the Governor of the Bank. There is one and only one name that will appeal to all sections of opinion in India—and that name is Sir Osborne Smith. I understand that the further stages of the Reserve Bank proposal will come up for consideration in the Viceroy's Executive Council meeting to be held in Calcutta. I hope that the question of the appointment of the Governor would be taken up and solved in the only way that will satisfy India. There is another special reason why this question should be considered one of urgent importance. Sir Kenneth MacDonald will, in the usual course, be leaving by the end of this month ; if Sir Osborne is to be the Governor of the Reserve Bank, it would be essential to urge Sir Kenneth to continue as Managing Goferno r of the Imperial Bank for at least another two years. At the end of that period, Mr. Lammond may be trusted to take charge of the Managing Governorship.

(Continued from page 21)

facturing costs in this country are at least Re. 1 per per yard higher. This is, therefore, no real protection and if you add 9 annas to 14 annas making Rs. 1-7 Japanese materials will still be cheaper than the other imports which are coming in at Rs. 1-12 per yard. There will, however, be slight assistance to the very heavy cheap cloths but as the imports of these usually contain cotton they will escape this duty as there is no specific duty on union cloths.

* * *

"Hosiery is subject to a specific duty of 18 annas per lb. and here unions are subject to the same duty. This is a step in the right direction but is the specific duty high enough? Japanese imports in 1931 were Rs. 4-1-8 per lb., in 1932 Rs. 3-0-2 and in 1933 15 annas while imports from other countries were Rs. 4-4-7, Rs. 4-15-7 and Rs. 4-12-2, respectively. A duty of Rs. 1-2 per lb. would, therefore, seem insufficient. Japanese imports have risen from 17,000 lbs. in 1931 to 150,000 lbs. in 1932 and 148,000 lbs. for the seven months of 1933. Japanese imports have taken the place of the bulk of Great Britain's imports and the new duties will not help Great Britain in the slightest degree. It is surprising that woollen knitting yarn and wool worsted for weaving have not been included in the Bill as Japan has made such rapid strides in the last 19 months as to monopolize the whole market."

INDIAN MERCHANTS IN JAPAN

A curious commentary on the goodwill behind the Indo-Japanese Trade Agreement which is now about to be signed is the report of a Bill, which is reported to be studied by the Japanese, investing the Minister for Commerce and Industry with authority to interfere with the industry and to organise it on a basis in which foreigners will be excluded from participation therein. Obviously, the Bill has been drafted in anticipation of the satisfactory termination of the Indo-Japanese trade negotiations. For it contemplates the organisation of the export of piecegoods from Japan and also purchase of Indian cotton from India. The salient features of this new piece of legislation are that the Minister will be empowered to prohibit the export of guilds as well as outsiders when he believes it is necessary to do so and to regulate export prices. An adjunct of this legislation is the movement which is now afoot in Japan to create a joint stock company or union by the mill-owners and Japanese traders for the purpose of exporting piecegoods to India. It is proposed to establish branches in Bombay, Calcutta and Karachi so that the three big centres of distribution of piecegoods would be controlled. The organisation will be controlled by the Japan Cotton Spinners' Association and the practical effect of it, it is understood, would be to control every yard of cloth exported from Japan and to squeeze out of the trade the numerous Indian merchants who have established in Japan for a long time and plying a lucrative business. The President of the Federation of Indian Chambers has received numerous representations from such merchants drawing the attention of the President to the situation now created. It is only to be expected that Mr. N. R. Sarker will lose no time in addressing the Commerce Member on this subject not only in view of its relation to the Indo-Japanese trade agreement about to be signed but also with a view to urge on him that any such action on the part of Japan must give rise in India to similar attempts on our part to keep the export trade in raw cotton entirely in the hands of Indians. While it is highly regrettable that so soon after the termination of the Indo-Japanese trade agreement Japan should have chosen to act in a manner inimical to the interests of a large body of Indian merchants, there can be no doubt about the necessity or the equity of India attempting to keep the Japanese houses out of the export trade in raw cotton. We hope that Sir Joseph Bhore will recognise the grievances of the Indian merchants and do his best to persuade Japan not to impose a new strain on the commercial relations between the two countries.

OLYMPUS

(From Our Correspondent)

New Delhi, January 3.

The Olympians are leaving Delhi, one by one; and the end of this week will find them all in Calcutta for the annual homage they pay to their past love.

* * *

So important is the Agenda for the usual early-January meeting of the Executive Council of the Viceroy that Sir Joseph Bhore is leaving in spite of the need of his staying here to give the finishing touches to the Indo-Japanese settlement.

* * *

Sir George Schuster will give an account of his stewardship for the year and lay before his colleagues rough plans for his budget statement. Sir Joseph Bhore will also do the same with regard to the Railway finances; but, in his case, the task is much simpler.

* * *

Sir George has been up against many powerful interests. He has been told by the Army people that there is no scope for further economy in their budget; he is being constantly pressed for fulfilling his promise of restoring the salary cut. And the thought that this will be his final budget must weigh on him heavily. Sir Basil Blackett left a prosperous concern; will Sir George leave a bankrupt treasury?

* * *

I am told that the Madras Government have had some taste of the anger of the Central Government at their decision to restore the entire cut for the subordinate services. The Imperial Services feel angry for this "Discriminatory Treatment"; everything is being looked at, these days, through "discriminatory".

* * *

Sir Samuel Hoare would rather not go to Parliament again for sanction of the continued cut. He is afraid of the diehards who threaten that recruitment to the Imperial Services will suffer if the salary cut continues! But the alternative to the restoration of the cut is the imposition of a higher salt tax.

* * *

This suggestion has been seriously put forward for some time by the interested parties but has been turned down. Can Sir George Schuster afford to become unpopular by raising this tax? And yet the Finance Department are always worried why this most appropriate source of taxation should be left untapped when every other source has been used up to the maximum!

* * *

The answer that it should be treated as an emergency tax does not appeal to them. They are not worried about the future; they want to get over their present difficulties. They have to look round for extra revenue somewhere. All sources of taxation have been exhausted and, in fact, the law of diminishing returns is in full sway. Why not strike out a new line, they argue, and even at the risk of unpopularity lay the foundation of a stable budgetary position for the Central Government of the future?

* * *

Anyway, it is clear that they are not anxious to make any changes in their revenue sources. They see no alternative to refusing the restoration of the cut and, however embarassing it may prove to Sir George Schuster, he has made up his mind not to give this source of income which yields him roughly Rs. 2 crores a year.

* * *

And as for balancing the budget for the next year, it will be done by preparing estimates in a manner that a small surplus is left over. The two crores credit from the British Exchequer will prove handy and the rest can be left to the skill of the budget officials. After all, estimates cannot be framed very correctly and if they have fallen short this year by Rs. 5 crores in spite of the best effort to frame them genuinely, what would it matter if they fall short next year? Let the budget be a gamble in estimates once again!

* * *

The question of the successor to Sir George Schuster has been taken up by the higher authorities. No member of the Executive Council knows anything about it. It is a matter to be settled by London. The argument given is that the new Finance Member may be the first financial adviser to the Viceroy and, therefore, must be chosen with care.

* * *

Which means that he must necessarily be a London man, either from the British Treasury or from the City of London. The I.C.S., who thought that the post was to be held alternatively between them and the London nominees, are disappointed. They were building hopes on seeing Sir Alan Parsons installed as the Finance Member. Sir Alan has great administrative talents and his handling of the money market has always given a special tone of confidence. But if the Finance Member's chief qualification is his knowledge of the international finance, then London will score in favour of its nominee.

* * *

I have heard few names mentioned in this connection but I will not risk mentioning them. Firstly because no one really seems to be in the know here and secondly because premature speculation may prove somewhat embarassing to the authorities in a matter of considerable delicacy. So I will wait for another opportunity to return to the subject.

* * *

Our Japanese friends are still with us. Every bluff tried by their colleagues in Osaka has failed to cause any stir here. The Government of India have after all found their mind and firmly stuck to their terms. The Japanese are delaying merely in the hope that there may yet be a chance. But Delhi authorities, though very tired of the Japanese tactics, have enough patience to bear up longer. There will be an agreement. The Japanese know that they cannot return to their country without one. But they are trying to make the best of their opportunities. And who can blame them?

"HILLBIRD."

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

ECONOMIC REVIVAL THROUGH CURRENCY REFORM

PLEA FOR FREE COINAGE OF SILVER
EIGHTEENPENCE WRONG FROM THE START

BY SIR M. DE P. WEBB, C.I.E., C.B.E.

The Managing Editor of *Indian Finance* invites me to tell his readers what is in my mind with regard to the currency future of India—what "plan" I have so far conceived; and how I propose it should be carried out. I respond with pleasure. Knowing, as I do, of the daily increasing regard and steadily growing support which *Indian Finance* is winning on all sides, I feel that any views, to which I may here give utterance, will assuredly receive a very wide consideration by experienced readers—Indian and European.

The Fall in Prices

At the opening of 1934, India finds itself through no fault of its own, still involved in the grave economic crisis in which the nations of the West are bogged. The development of this crisis has been attributed by scientists, economists, and other experts to a variety of causes commencing with the normal progress of the "trade cycle", the invention of new machinery, and discoveries in breeding better and more prolific types of grains, seeds, fibres, cottons etc., and ending with the Great War of 1914-18 and all its consequences. It is not necessary here to discuss, or even to recall, these various explanations (there are over a dozen of them): it will suffice to remark that India has directly felt the disaster in the forms of (1) an unprecedented fall of prices; (2) an unparalleled shrinkage of demand; and (3) a heart-rending and unheard of volume of unemployment—not only of men and women, but also of capital and of goods. And it may also be added that it is now very generally recognised and admitted that the shrinkage of demand (with its accompaniments of national quotas, defensive tariffs, financial restrictions, and other obstacles of trade), is largely the consequence of the catastrophic fall in the general level of prices throughout the world.

Danger of Common Insolvency

What is to be done? I notice in a leading Calcutta Financial organ that 207 business concerns, whose shares are regularly quoted, have passed their last dividend; and I know of several other concerns in India, whose shares are not publicly quoted, who are in the same predicament. Again I ask—what is to be done? Is India to sit with folded hands, and to continue quietly and meekly to sink lower and lower till her Local Bodies, her Municipalities, her Port Trusts, and her Provincial Governments are all involved in one common insolvency?

The Government of India, following the example and acting under the orders of the Secretary of State for India and the British Government, have so far done nothing effective to revive the nation. On the contrary, they have allowed themselves to drift into that most damnable policy of all—the policy of retrogression and degradation. Salaries and wages have been cut, employees have been thrown on the streets in thousands; beneficent activities have been checked, and progress in many directions stopped. Indeed, unless something be done, and done quickly, we shall witness the putting back of the clock in India for fifty years.

Futility of Restriction

Conditions in the West are even more deplorable. Although millions are unemployed, and many more millions underfed, food has been destroyed; catches of fish thrown back into the sea; land put out of cultivation; production curtailed and trade restricted,—all under the delusion that the world is afflicted by over-production! Yet everybody knows that never have the world's populations been more numerous. Never have human wants, desires and ambitions been greater or more widespread. And never has Nature been more bountiful, or, it may be added, transport less expensive. Yet trade shrinks; and the world's unemployment increases! And Governments in England and India seem to look on quite helplessly whilst their States sink deeper and deeper into the mire. Can nobody give a lead in the right direction, and show the world the road to recovery?

* * *

No more Control from London

Here it is that India's great opportunity has arrived. India to-day is economically far stronger than any part of the British Empire outside the United Kingdom. It is strong in its minerals, and in the richness and fertility of its soil. It is strong in the peaceful habits and steady industry of its vast population. It is relatively very strong in its comparative freedom from unremunerative National Debt. And it is strong in leadership in all branches of human activity. Let India speak up now, and demand, with all the vigour and persistence it possesses, immediate Economic and Financial Independence. No longer should India acquiesce in the introduction or modification of any import, excise or export duties except in the interest of its own economic growth. No longer should India accept London control of its finances and currency which, though beneficial to this country in the past on the whole, has often been expensive, restrictive, and the reverse of stimulating to economic development.

So long as India's economic, financial and currency policy is not guided solely by the Government of India (who, behind the scenes, usually fight strongly on the side of India), but mainly by the Secretary of State for India and the democratic British Government (dependent for its solidarity and sometimes for its very existence on Party votes), there is always a danger that India's economic progress may be hindered by secret influences—at root, lust for power, excessive acquisitiveness, and greedy commercialism—too many evidences of which can be seen in the fiscal, financial and currency measures of the last forty years.

No doubt, similar influences would be at work in India, were India's economic, financial and currency problems solved at Simla and Delhi, instead of in London. But unfairness, injustice, irregularity and folly could be much more easily checked and kept at bay by India in India, than in London where, not only the views of the people, but also of the Government of India are sometimes ignored.

Will India Save the World?

And now I can explain what is in my mind with regard to the currency future of India. I can see India the most powerful division of the British Empire, economically—an independent unit, economically—successfully controlling its own finance and currency. I can see India with its intimate knowledge of tropical people, and of people in other lands in many parts of the world where Indians have settled, boldly leading the way in the rehabilitation of silver as the most suitable money-metal for such people and such lands. Further, I can see India, by its bold, monetary leadership, lifting, not only itself and its own nationals, but also the people and countries of the West, out of the appalling economic mess into which they have allowed themselves to be misled by their short-sighted, one-metal-minded financial giants, whose brains are now suspected by many to be composed of clay.

Example of President Roosevelt

But this is, perhaps, looking too far afield for a first vision. Considering the matter at closer quarters and a little more practically, I can see quite a number of patriotic people in India who, recognising the gravity of the economic situation in India, decide that they ought to devote more time to a fuller study of the subject. To such patriots, I would suggest recalling to mind some of the things which President Roosevelt has done. For example, he has declined to wait for, or listen to any more international conferences. (No world monetary conference has ever yet been able to agree to, or to effect, anything practical). Mr. Roosevelt has decided that the U. S. A. shall act alone, and find its own salvation. He has recognised two "first principles" of the utmost value :—

(1) *Internal* prices are of greater importance to the people of the U.S.A. than the dollar-sterling, dollar-franc or any other foreign exchange.

(2) The general level of internal prices must be restored to its level of five years ago.

And as one of the means of raising internal prices, the United States Mints have now been opened to the free coinage of U.S.A. mined silver.

I mention these three matters because they form, in my opinion, a thoroughly sound foundation on which Indian currency reformers might very well build.

Present Evils Re-stated

It may be well at this point to re-state in the briefest possible way what exactly is wrong, and the only remedy (in my opinion) that can put that wrong right in our life-time :—

(A) The level of wholesale prices has fallen during the last five years by 40 to 50 per cent. (causing several countries to erect defensive Customs Tariffs and other barriers to trade). This fall of prices has greatly reduced the profits of all producers.

(B) Trade in all directions has shrunk alarmingly, causing the reduced profits, referred to above, to disappear. Cut salaries and wages, and wholesale dismissals have followed, which mean still further diminution of trade. Economic collapse in several quarters is now threatened.

Two things are clearly necessary to stave off disaster :—

(1) The restoration of prices to the level of five years ago; and

(2) An increased demand for the good things of the earth.

All efforts to raise prices and enlarge demands have so far failed. Those efforts have been :—

(A) A reduced production and general degradation on the one hand; and

(B) The offers of increased loans by banks at very cheap rates, on the other.

Reduced production should certainly force up prices, all other things being unchanged. But with twenty to thirty millions of people in the world unable to earn a living, such a policy can only be described as a policy of madness.

New, not merely more, Money

The effort to put more money into active use is, undoubtedly, a move in the right direction. More money buying commodities and services would certainly raise prices, all other factors being unchanged. But why limit the effort to loans of existing bank money from the existing Central and other banks? No wonder that in all countries this attempt has proved infructuous.

What is now urgently needed is that new, additional money from altogether new sources must be discovered, and legalised. The way is obvious. The Mints of the world, which have been closed by short-sighted legislation, must now be re-opened to the free coinage of full-value, unrestricted legal-tender, silver coins. (Silver money is already quite popular with more than half the people in the world). In this way, the mass of the people in many countries—not merely a few credit-worthy individuals and firms in favoured localities—could obtain some of the new money, directly and indirectly, *without having to BORROW it from a bank.* This last point is very important. The results of this return to open silver mints would be, to start with,

(A) That more brains and labour would be required at the silver mines, (in Australia, in Canada, in Asia, in Mexico, in Bolivia and Peru, and in the United States, largely), thus bringing

into existence new demands from the neighbourhood of the mines for goods.

(B) The purchasing power of shareholders and all interested in the mines (including lead and copper mines which yield silver), would be increased all over the world.

(C) The basis of credit would be everywhere enlarged with an effect on the world's purchasing power analogous to that produced in the past by new discoveries of gold in Australia, in California, in South Africa, etc., and

(D) The value of the huge quantities of silver now held in reserves in India and China and elsewhere, would be substantially enhanced (for it could all be coined into rupees), and with it the wellbeing, credit, and purchasing power of the greater part of the population of the globe.

THE ONE AND ONLY WAY

Here we see the one and only way in which the level of wholesale prices in India (and elsewhere) could certainly be raised, demands for commodities increased, trade improved, confidence restored and a return to prosperity assured. And as India is already the chief silver-money using country in the British Empire—*a country which built up by aid of open silver mints a volume of overseas trade greater than that of all the British Dominions put together*, it is obviously India's duty and privilege to lead the way in the great World Recovery Campaign.

More silver money in active use—that is the certain remedy for the trade shrinkage which has maimed India, and reduced the world to a state of economic depression more severe and ominous than anything of the kind hitherto experienced.

More silver money in active use—that is the slogan for India's currency reformers, the sound of which will inspire every patriot to renewed effort towards certain victory. It means :

1. *The immediate derating of the rupee;* for such derating would put more rupees into circulation and so help to raise rupee prices. It would at once enable exporters to compete more effectively overseas, and tend to increase India's favourable trade balance. Not a single sound argument in support of the 1s. 6d. ratio was produced by Government in the recent Legislative Assembly discussion on the Reserve Bank of India Bill. Indeed, there is no such argument. The 1s. 6d. ratio was wrong from the first, and is now generally recognised by experts to be indefensible.

2. *The immediate cessation of all sales by Government of supposed "excess" silver.*—These sales have been a painful blunder from every point of view, depressing the silver market, and reducing the purchasing power of all who hold silver and silver ornaments as reserves, including the people of India. These sales of "surplus" silver will rank in history next to Government's sales of pounds sterling at Rs. 7 each in 1930, as supreme acts of currency folly. If any Department of Government still thinks it is holding "surplus" silver, let the silver be at once coined into rupees, and used for paying Government's current expenses, taxation being reduced *pro tanto*.

3. *The Reserve Bank of India Bill should be amended* by the Council of State at its next meeting so as to permit the Bank (*a*) to buy and sell silver; and (*b*) to hold silver bullion, and the full-value silver coins of other nations (who co-operate with India by way of open silver mints) in its Currency and other Reserves. Deliberately to exclude such functions from the Reserve Bank of the greatest silver-money using country in the world, is an outrage on India almost as bad as that of 1893 which callously swept aside India's long-established, and thoroughly good monetary standard, and deprived scores of millions of hard-working Indians of a large portion of their savings.

4. *An immediate Public Announcement by India's leaders that India is a Silver-Money Country*, ready to co-operate with the United States of America, China, and any and every other country which will establish, or reopen mints for the free coinage of full-value, unlimited legal tender silver money at such rating to gold as may be mutually agreed upon. A Resolution to this effect with a recommendation to the Government of India to make a similar public announcement should be moved at the next meeting of the Legislative Assembly.

5. *A demand for the immediate reopening of the Indian mints to the free coinage of silver* should be formulated as soon as possible, and signed by the leading Agricultural, Industrial and Trading interests (including, of course, Banking and Shipping) of the whole of India and Burma; and also, so far as possible, by similar interests in the Straits Settlements, the Malay States, Ceylon, Nyassaland, Mozambique, Tanganiyka, Uganda, Kenya, Red Sea and Persian Gulf Territories. All those countries would benefit greatly by an ample and generous supply of good, full-value silver money, preferably, rupees. The effect throughout India and the East of such a demand for reopened silver mints would be electrical. Indeed, I can see Prosperity leading to her feet, at the mere thought of such a beneficent and stimulating monetary change.

This completes for the moment "what is in my mind with regard to the "Currency Future of India." I have now only to add a few words as to "how I would carry out these ideas."

FROM CURRENCY LEAGUE TO N. R. A.

There is already in existence an organisation, with branches in the chief cities of India, formed with the special object of studying and promoting currency reform. Would it not be possible to enlarge and develop the scope of that organisation's activities, so as to include what I think what all Indian patriots will regard as the most important reform of all,—the reopening of India's Mints to the free coinage of silver?

A name could be selected for the new and enlarged organisation that would attract and embrace supporters of all races, religions, creeds, and castes,—something like "The Indian National Recovery Association," to borrow an idea from the U. S. A. There is no room for petty differences of opinion, however, on minor matters when the economic health of India—the root source from which all trades, callings, professions, and the great organisation of Government itself draws sustenance—is in grave jeopardy, as it is at present.

Let us start the New Year by immediate remedial action. I have ventured to outline the direction which long experience convinces me we ought to take. As I have already said, India is strong. India, too, understands well the great possibilities of silver. Let us, therefore, give the world a lead. Let India go forward and conquer as conquer she will, if only her sons act solidly together. Now is India's opportunity. Let her seize it.

Action on these lines can be fruitfully taken by India and the United States moving in unison. These two countries have much in common in their economic structure. With India and the U. S. A. acting together, the restoration of world prosperity would be assured.

THE GOLD STANDARD & OUR PRESENT ECONOMIC TROUBLES[*]

BY M. L. DOHERTY

When England, faced with financial ruin in 1931, was forced to save herself by relinquishing the Gold Standard, hopes were raised that we had at last got a Government strong enough to resist the International Money Monopoly, and that by adopting a more rational monetary system, the crisis, as it was then, would be brought to a speedy close and an era of prosperity begun. But alas, for such hopes! After a lapse of more than two years not only have the Government not introduced a single practical measure of relief, but they still adhere to the antiquated and costly Gold Standard monetary system, which has been the cause of all our misery.

To any student of monetary history, it is difficult to believe that our leaders, many of whom are men of the highest integrity and public spiritedness, should, in the face of such widespread ruin, be content to allow this state of affairs to continue: and with the remedy in their hands take no practical step to relieve the situation. And the fact that they have not done so seems to point, conclusively, to a power behind the scenes—the power Disraeli and others like him speak of—which is sufficiently powerful to control the destinies of a people whose proud boast and song has been, and still is, that "Britons never shall be slaves"

Had the first step in this drama been logically carried out we should have seen a return to prosperity long ago. But our leaders, instead of taking advantage of the situation and introducing a sound National monetary system, such as carried us through the greatest crisis in our history, the Great War, had apparently no other intention than to prevent further gold leaving the country, by suspending the Act which compelled us to sell gold for export at a fixed price. This was the least they could have done. The country had been almost denuded of gold, and as gold formed the basis of our currency, denuded of currency also, leaving us in the ludicrous position of being almost without money.

But to understand this, it is necessary to review briefly the working of the International Gold Standard, and to consider in passing the use and functions of money. It will then be clear how inadequate gold is as a monetary medium of exchange and how money, based on gold, instead of being the servant of industry, has become the master: holding us in a bondage from which successive Governments, Labour, Liberal, Conservative, or National alike, have been unable to deliver us. Sir Basil Blackett, once a supporter of the Gold Standard and now one of its critics says in his book, "Planned Money":—

> The Gold Standard has become a religion for some of the Boards of Central Banks in Continental Europe, believed in with an emotional fervour which makes them incapable of an unprejudiced and objective examination of possible alternatives.

According to the rules of the Internation Gold Standard, a country receiving gold is expected to increase currency against it, and a country losing gold to contract it. Now, this increase and contraction of money has a great effect on the prices of commodities, as according to the quantity theory of money, the more money there is in a country the higher the general leval of prices, and conversely when money is short prices are low. Consequently, in the country losing the gold prices fall, and in the country receiving the gold prices should rise with the increase of currency.

In theory, also, this expansion and contraction of money is supposed to be means by which equilibrium is maintained between nations, the country losing the gold and experiencing a fall in prices being enabled to enter and undersell in the country where prices have risen, thus causing the gold pendulum to swing back until equilibrium is once more attained. But how differently this innocent looking theory works out in practice needs no enlarging here. Apart from the effect which tariff barriers produce, and which the nations of the world are bound to use if they wish to protect their home industries from the results of their own financial unwisdom, and the effct of the rules they have internationally agreed upon, the swing of the pendulum is not so quick as may be supposed, and generally produces in the country losing the gold (as in the case of England) the collapse of industry, strikes, unemployment, and general social misery. These periods of depression are popularly known as Trade Cycles, that sort of bolt from the blue which just simply happens. But the phenomenon is due to no other reason than the movements of gold. And, if, according to the Charts, prosperity does return to us in 1935, it will not be because the Goddess of Wealth has decreed it so, but because, for some reason or other, gold once more finds itself in plenty in the vaults of the Bank of England.

Unhappily for us, however, and for the peoples of the world in general, these movements of gold are not unusually brought about by the needs of trade and industry, but are more generally the work of those who control the bulk of the world's supply, and who, by the means of the International Gold Standard, can juggle with prices to an unlimited extent reaping enormous profits by so doing from the producing classes. They are the world's real Autocrats, and have the power to stimulate industrial prosperity, and to destroy it, by increasing or diminishing the available gold supplies as well as by the mere manipulation of credit.

In my last article I quoted the example put forward to Government by the London Chamber of Commerce, and as a further illustration of the working of this Gold Standard it is worth while repeating here:—

> Let us take the position of the Manufacturer under the International Gold Standard system, who, having sold 100,000 units in one year and sees his sales steadily rising as time goes on, decides that in the next year he can dispose of 150,000. He enlarges his plant accordingly and starts to manufacture at that rate. For some political or other reason, quite remote from the needs of producers and consumers, France, or some other country, withdraws gold, currency is contracted, prices fall, and the manufacturer has his product left on his hands, or he must sell at a loss. Alternatively, gold flows in, prices rise, and the manufacturer shows an abnormal profit. This encourages the formation of new companies to manufacture the same article, seeing so large a profit is to be earned by so doing. Gold is once more withdrawn, prices fall, and those new companies are ruined, probably dragging the original company with them.
>
> It is submitted that a monetary system which ensures equilibrium amongst nations by such methods is out of date in a scientific age.

England, in the matter of currency contraction, obeyer the rules meticulously, but France, and America, the countries receiving the gold, did not.

---

[*] The first article of this series appeared in our issue of December 2, 1933.

Until in 1931, when we were in danger of losing all our gold, we were once again forced to abandon the Gold Standard.

The return to the Gold Standard after the war as advised by the League of Nations has been the cause of the greatest losses the world has ever experienced. In England thousands of millions of pounds' worth of property has been reduced in value to less than one-half of its former worth and the public have suffered losses far greater than the whole of the Empire's costs of the Great War.

The bulk of the national wealth has already passed under the control of a small minority of the population through the manipulation of Bank Credit. It is estimated that ninety per cent of the farmers who were prospering twelve to fourteen years ago are now either bankrupt or their property hopelessly mortgaged to the banks. Indeed, it is no exageration to say that Britain herself is in pawn to the Bankers. Never has there existed a more shameful system of wealth confiscation than the modern methods of Finance. Sir Henry Deterding, the Managing Director of the Royal Dutch Oil Company, confirmed the truth of the following statement which appeared in the press:—

> If ever we get out of the present crisis then four per cent. of the population will own eighty per cent. of the wealth.

There is no natural reason why our industry should not be flourishing to-day, and with the advance in mechanical production our peaple enjoying increased leisure and a higher standard of living. All the natural conditions are present for an era of unexampled prosperity. The earth is yielding her richest treasure in food and raw materials, and man was never better equipped than he is to-day for turning this natural wealth to a variety of uses with the minimum of human effort. But instead of this we are left with the spectacle of the miner unable to buy fuel because there is too much coal on the market, the cotton operator unable to renew clothing because to much cloth has been produced, the producers of all kinds of primary products—wheat, wool, cotton, coffee, rubber etc.—forced into poverty because their productive efforts have been too successful. The position is absurd, and would be a matter for jest, were it not for the tragedy of it all. The goods are there; and the real need for the goods also, and all we have to devise is some adequate method of getting the goods across from the producers—who need to dispose of them—to the consumer—who certainly requires the use of them.

Now, if gold as the basis of our monetary system is the cause of our economic distress—as it undoubtedly is, because the crisis is a money crisis due to the shortage of this metal—why use it? If a system fails to perform its functions, and proves insufficient for our needs, surely the obvious course would be to find an alternative. We were faced by the same position in 1914; but it did not take us two years or even two months or two weeks to find one. And the system adopted then was the safest and finest the world has ever known. It not only carried us through the greatest crisis in our history but it caused a boom in our industries. And without it we definitely could not have carried on the War. Why has this system not been adopted again, or rather, why was it not adopted two years ago which would have brought prosperity back to our poverty-striken people? It seems as though we would have to wait for another war before saner and wiser councils could prevail, because this is undoubtedly what would happen if we suddenly became involved in another war!

The chief function of money is to facilitate the exchange of goods and services and a monetary system which fails to do so is definitely bad. This is the only meaning that can be attached to the terms good or bad when applied to money as they refer solely to its ability or capacity for performing its functions well or ill. The quality of soundness, which the gold apologist attaches to gold, that is, its scarcity, is the very cause of its unsoundness, because there not being enough to go round, it not only cramps trade and industry but brings about trade wars, and trade wars lead to military wars. Money is merely a utility, a contrivance for facilitating certain operations; just as Railway tickets, postage stamps, and pawn tickets are. Do costliness and scarcity add to the utilities of these contrivances? Would a Railway ticket be any more useful as a ticket if made of gold? And if scarcity be an essential characteristic of good money cannot the supply of paper money be much better regulated and restricted than gold coin under modern conditions?

Where then is the sense of using a gold standard and of what practical use is it? The answer is that so far as its physical properties are concerned, those properties which have made it valuable in jewelry, dentistry, and other arts and crafts—gold is of no more use for monetary purposes than paper money. It no more assists in the estimation or expression of values than a £1 Treasury Note. If an individual purchases a hat with a Treasury Note, whilst he has settled his personal account with the hatter, the hatter has still to secure settlement of the note. Final settlement is only reached when the note is redeemed by the issuer—the State or the Bank who receives it in payment of taxes, an overdraft, or interest charges. Even gold sovereigns do not settle debts in the economic sense, unless they are destroyed for the gold they contain. Gold coins can only finally settle debts by disappearing from circulation. A legal tender note represents, first a debt owing by the state or Bank issuing it, and, secondly, a credit to the person accepting it as payment for value given. A Government has the

right to issue legal tender notes as claims against the public for expenses. Issued under such conditions they become a form of taxation. These notes may be paid to Civil Servants, Contractors etc., for goods and services supplied to the State. After circulating through the channels of trade they finally reach the Treasury in payment of taxes and may then be destroyed. Such notes would then have performed all the functions of money equally well as—in fact better than—so many golden sovereigns; better, because they would not be likely to go abroad and leave our trade and industries stranded as gold has done so often in the past. The value of all kinds of money as currency is governed by the same law whether it be gold, silver, copper, or paper; and it makes no difference either to the value or efficiency of the money or to the trade effected whether it be made of metal, or paper, or even cabbage leaves, provided the units have the same legal tender privileges.

As the eminent Oxford Scientist Professor Frederick Soddy states, "the Gold Standard monetary system has wrecked a scientific age." Whereas modern science and inventions have brought the forces of nature under man's control, so that an abundance of any form of wealth can be readily provided, the world's bankers have slipped in and placed a barrier between production and consumption. They have not been content to take their share of modern wealth production—great as it has been—but they have refused to allow the masses of mankind to receive this. In consequence, millions of pounds' worth of products have been destroyed. Corn has been used as fuel. Coffe has been thrown into the sea. Fruit has been allowed to rot. Hundreds of tons of fish have been thrown overboard. In fact the world's productive capacity has been slackened to a mere fraction of what it could have been by the refusal of the Bankers to furnish the public with enough tickets (which we call money) to enable the producing classes to distribute the wealth produced. Money is not international. And there is no avoiding the conclusion that the attempt to make it so is part of a deep-laid plot to control the world politically, industrially, financially, and morally. It is one of the failures of our modern democracy. And as the late Lord Bryce said in his "Modern Democracies":—

> Democracy has no more persistent and insidious foe than the money-power to which it may say as Dante said when he reached in his journey through Hell the dwelling of the God of Riches. There we found wealth, the great enemy. That enemy is formidable because he works secretly by persuation or deceit rather than by force and so takes man unawares. He is a danger to good Government everywhere.

Since the value of money is governed by its quantity, would not a paper currency be a far more rational system for maintaining a fixed standard rather than a metal, the supply of which is largely dependent on chance discoveries and accidents. A paper currency could be easily controlled and made to respond to variations in demand which is not possible under the gold standard.

The benefits that would result from a purely national paper currency are almost incalculable. Among these might be mentioned :—

1. A much lower and stable Bank rate.
2. Ample facilities could be provided for productive undertakings without any undue expansion of credit.
3. Our currency supplies would not be affected by foreign crises, nor by the financial wants of foreign rivals. Whilst under the gold standard we are in danger of losing our gold, foreigners would have no use for our notes, and they would not be exported.
4. A National paper currency forms a natural protection for our home trade and would serve to check dumping. Under the gold standard our foreign rivals are able to manipulate prices by merely exporting gold.

Nothing in the realm of trade and commerce secures to its possessors greater or more absolute power over the lives and fortunes of men than the control of money. A purely national currency, a paper money which is not liable to go abroad, is one of the best and most natural aids to the protection of its home trade that a Government can possibly devise.

GREAT BRITAIN

AN UNWONTED REFORM

On December 20, the House of Lords was the scene of unusual interest. No question, that came for its consideration, excited the interest of its members as Lord Salisbury's Bill for reform of the Upper House, on the present occasion. Lord Hailsham moved that Lord Salisbury's Bill should have precedence over other business. But, Lord Ponsonby, leading the Labour attack, moved the refusal of leave to introduce the Bill, on the plea that the reduction of the number of hereditary peers in the House of Lords, proposed in the Bill, was a limitation of the Royal prerogative. He argued that the Bill should have been preceded by an address to the Crown, asking permission to introduce the measure. He also described the measure as a political imposture and an attempt further to gerrymander the Constitution in favour of the Tory Party. He observed that the Bill was an attempt to hamper, handicap and hamstring the future Government under the pretext of reforming the House of Lords.

Lord Ponsonby was dignified in his opposition to the introduction of the Bill. He did not indulge in vituperation, nor did he suggest the annihilation of the House of Lords, as the Socialists, in general, did. But, he was not by any means satisfied with the present House of Lords.

The fairness of his criticisms found no less a supporter than Lord Reading. He agreed that the Bill would restrict the prerogatives of the Crown.

The Bill is open to criticisms on two issues, namely, the whittling down of power of the House of Commons and the preservation of the hereditary element.

Lord Salisbury's Bill, while ostensibly recognising the House of Commons as the final authority, proposes to acquire, for the House of Lords, delaying powers in a radical way. It also encroaches upon the unquestioned power of the House of Commons in respect of money bills. In the first instance, the argument was based on the possibility of the House of Commons passing legislation, other than purely financial, by smuggling it in Money Bills. The non-financial legislation, as such, may not be the deliberate judgment of the people, but only that of a passing majority; and, in the second instance, the Bill attempts to take away the power of the Speaker to certify whether any Bill is a Money Bill. Hence, Lord Salisbury has planned his Bill in such a way as to compel the House of Commons to go to the polls, if the House of Lords rejects a Bill three times by an absolute majority of the whole House. But, the final decision would be referred to the next ensuing House of Commons, whose verdict would be conclusive. Such a proposal reverses the respective powers of the two Houses as they now obtain. According to the Parliament Act, any Bill, rejected by the House of Lords three times, becomes law by the final decision of the House of Commons. The proposed innovation, therefore, affects the power of the House of Commons, in so far as it has to go to the polls before registering its final decision. On this ground alone, the people will fight, Lord Salisbury's Bill tooth and nail.

As regards the certification of the Money Bill by the Speaker, the Bill proposes a joint committee of both the Houses with the Speaker as Chairman to decide the question. Here again, the House of Lords is seeking to gain radical powers to the detriment of the prestige of both the Speaker and the House of Commons. This is the second front, offered by Lord Salisbury's Bill, for an attack.

The other part of the Bill refers to the composition of the House of Lords itself. Lord Salisbury, though a firm believer in the hereditary principle, recognises its vulnerability. For, on the basis that, only once, in the last session had the attendance in the House of Lords exceeded 150, Lord Salisbury proposed 150 hereditary peers, 150 Lords of Parliament chosen outside the peerage besides the Royal peers, and a reduced number of bishops and law lords, totalling about 330 Lords.

Lords spiritual, the first estate of the realm, are bound to resent any whittling down of their numbers, which is only 24, excluding the two Archbishops. They would also insist on retaining their present strengh in the House of Lords, as the British Constitution is founded on the bedrock of Protestantism. Any drastic interference with numbers can only apply to the Lords Temporal, the second estate of the realm. But, Lord Salisbury is against rejecting the hereditary principle *in toto*. For, he admitted that he could never understand the rationale of attacking the hereditary principle, which permeates the whole structure of society. His stock agrument was that the humblest person inherited property from his father, which fact is proof positive of the recognition of the hereditary principle. But, he overlooked the fact that, in a deliberative Assembly, persons of talent alone were needed, and it was too much for him to assert that a person though inheriting property from his father, did not necessarily inherit his parents' ability. In any case, Lord Salisbury gave away his case, when he proposed the reduction in the number of hereditary peers to a total of 150 members. On the question of the retention of the hereditary element, even the Conservative Party is not prepared to recognise it as a qualification for the

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

legislator. Thus, all the British Parties, Conservatives, Liberal, and Socialist, are opposed to the perpetuation of the hereditary element in legislative bodies. In this issue, Lord Salisbury's Bill must face the attack from a united people.

Another defect of Lord Salisbury's Bill is that no indication of the method of choosing the outside element, for membership in the House of Lords is given. The question is prey to conjectures of election or nomination. Even if the suggestion of election is to stand, there is no understanding as to the appropriate constituency.

The *motif* of the Bill lies in the conception of the second Chamber as a barrier real or potential, against the expressed will of the people's representatives in the House of Commons. It was on this ground, and on this ground alone, that the old veto was absolished by the Parliament Act. Any attempt to resuscitate it at a time, when the world is encouraging dictatorship in not a few advanced countries, is foredoomed to failure. That such an attempt is meant by the Bill is clear from Lord Salisbury's declaration that protection ought to be sought against Sir Stafford Cripps' utterances on what the next Labour Government intends to do with the House of Lords. Lord Salisbury, therefore, sought changes to be made in the Constitution of the House of Lords, in order to make things safe.

From the debate that followed Lord Salisbury's explanation of his Bill, it was clear that even men of his way of thinking were divided on the reform of the House of Lords. Lord Astor, for instance, preferred a wholly nominated Upper House, in opposition to Lord Salisbury's Bill which would give a considerable number of industrial seats to the Socialist party in the next election. But, Lord Esher's attitude was better in that, while asserting that the Bill was based on plainly fallacious principles, he advised the Labour Party to avoid the idea of a dictator as it would destroy it.

Lord Reading, however, opposed the Bill on the ground that the present Parliament had no mandate to deal with the question.

Even Lord Hailsham, the Government's spokesman, dissociated himself by declaring that the Government had not reached any conclusion on the Bill and was not committed to its principles. But, he pleaded against the refusal to the first reading of the Bill, as such a course would be contrary to the established practice.

The discussion of the Bill brought into bold relief the grave disrespect for the prerogatives of the Crown of which these champions of the constitution are guilty.

The best answer to Lord Salisbury's panic in introducing his Bill precipitately, even without a mandate, came from Lord Ponsonby. He asked whether this "little Bill" would save the country, if cut-throats, incendiaries and anarchists could get control of it.

Even on the question of a formal first reading, the vote of the House of Lords on Lord Salisbury's Bill proved that no one gave it any serious thought. In spite of the fact that arrangements were made that only Lord Hailsham should vote and other ministers should abstain, among the Ministers some voted against the first reading, a few abstained, and some others voted for the first reading. This division of opinion in the Government itself does not promise any success to the Bill. Leave was given, therefore, to introduce the Bill by 84 votes to 37 and the Bill was read for the first time.

In this connection, it may be mentioned that the present constitution of the House of Lords is 759, composed of Royal peers 4, Archbishops 2, Dukes 26, Marquesses 38, Earls 165, Viscounts 84, Bishops 24, Barons 384, *Life* Peers 8, Scottish Peers 16 and Irish Peers 18.

UNITED STATES OF AMERICA

SUCCESS OF PRESIDENT ROOSEVELT

On the eve of Congress, it is gratifying that President Roosevelt still retains his personal popularity, although a grup of businessmen has grown restive under the Administration's "practice of hectoring and nagging the market". But, State Socialism has made much headway. The new regime is clearly in the interest of the people. But, the only factor, that militates against a rapid recovery, is that of uncertainty regarding the monetary policy. Even in circles, that oppose the monetary policy of Roosevelt, it is admitted that there is nothing, that is definitely done or threatened, to cause trouble.

There is much truth in this. The policies, adopted by Roosevelt, are admittedly sound in themselves. But, external factors are acting as a heavy handicap to immediate success. President Roosevelt has, off and on, displayed eagerness to amend his measures in such a way as to relieve their absurdities and impossibilities, if any. This point is conceded by one, and all, of his opponents. It is but natural, therefore, to assume that he has realised the necessity of removing the uncertainties about all financial relationships and about the future of financial business itself. The only way, by which he can remove these uncertainties, is to stabilise the dollar. Although it is widely believed that the ultimate aim of Roosevelt is to depreciate the dollar to a fifty cent one, and which he could have done at one stroke he has been the futility of taking such a precipitate step. He has realised that a depreciation of the dollar has no meaning, if it cannot be stabilised at

the requisite level. He must have also foreseen that the gold bloc and the "sterling area" could not be rushed into agreeing to the stabilisation of the dollar at a level, which would suit the United States best. As such, the uncertainties of the financial situation could not be helped. It was up to the business men and financial circles to have reassured the general public, regarding the sound position of the American currency, in spite of its deliberate depreciation. Had they taken such, withdrawals of money from bank reserves, tightening the money market, raising rates of interest on short-term loans, reducing the credit available for the carrying of commodities and securities and, in fine, the flight of capital could have been avoided. Unluckily for President Roosevelt, the financial community did not choose to take such a line of action. Their attitude was based, if not wholly, at least in major part to what appeared to it as a process of state socialism. In its intransigence, it received high encouragement from across the Atlantic. The Capitalists, all the world over, are a brotherhood. They did not halt to weight the pros and cons of the support from the British Press and platform.

More than the capitalists' acts of omission did the real michief. As Mr. B. M. Anderson, the economist of the Chase National Bank pointed out in an address at St. Louis, "American advocates of currency depreciation in 1933 have sometimes had the single objective of raising prices which is very different, of course, from that of stabilising prices though the two notions have been combined in the idea that we can first raise our prices by currency depdeciation to some definite level, say, that of 1926, and subsquently stabilising them there, bky varying the gold content up or down as circumstances may require. But both doctrines,—namely, that you can reach a definite level of commodity prices by currency depreciation and that you can hold that level once you attain it, by currency depreciation,—involve faith in a very definite mathematical theory of the relation of gold to prices . . . . .

The people of a continental Europe, in countries which have gone through extreme currency depreciation in the memory of practically all the adult population, could be expected to react in a violent way at a very early stage of currency depreciation. The reaction of our people while our currency has been in process of depreciation, with no definite objective in the relation between gold and paper money publicly announced, has been one of bewilderment. Their reaction to a definite, once-for-all debasement would be very different. A paper dollar fluctuating uncertainly between 60 and 70 per cent. of par has much less effect in raising commodity prices than a gold dollar, definitely fixed at 75 per cent. of the old value, would have".

The problem before Roosevelt is, therefore, how soon, and how best, to end the financial uncertainty by stabilising the dollar at a level of depreciation, condusive to the best interests of the United States. By his policy of a gradual depreciation of the dollar, he must succeed in the long run to coerce the gold block and the "sterling area" to agree to the stabilisation of the depreciated dollar, as a **fait accompli.** But, if, as Mr. Anderson advised, Roosevelt effected a definite once-for-all debasement of the dollar, he will do nothing short of forcing a currency war. It is evident, therefore, that President Roosevelt will continue his gold policy, even though the commodity prices have not risen in perfect sympathy with the depreciation of the dollar. But, it is also obvious that he is not going to set with folded hands, until the time comes for the stabilisation of a 50 per cent. dollar.

It is believed that the Administration will exploit the public works programme for the purpose of raising prices. Even here, critics argued that the Government could spend the public works allotment once, but only once, and that there was no reason to be at all confident that it would circulate in such a way that it would lift the economic structure equally at all points, as was necessary if it was to succeed. But, President Roosevelt is not to be decoyed so easily from his purpose. He is fully aware that there are clear signs of a trade revival in some of the most important European countries, which have formerly, used to import goods from America on an extensive cale. The trade prospects with Soviet Russia have also brightened, as a result of the United States recognising the Soviet Government and concluding a trade agreement recently. In addition, President Roosevelt ratified the silver pact, reached at the World Economic Conference in July last, which will greatly benefit countries on a silver standard in the East. As a consequence, the purchasing power of those countries should improve, and with the depreciated dollar, the United States should be able to expand the export trade in that direction. In view of all these favourable factors and in consideration of the immediate recovery, however partial, which the public works expenditure will induce, there is no reason for the Administration to effect any volte face in its programme, in the near, or remote, future.

It now remains to see what truth there is in the fears, entertained in many foreign countries as to the detrimental effect of the depreciated dollar on international prices, and its effect on world trade. No apology need be made to extract copiously from the

article, on this subject, of Mr. H. Q. Hodson, Fellow of All Soul's College:

> The effect of dollar devaluation on international trade will obviously be related to the character of the imports and exports of the United States. Consideration of this point gives some reassurance. In 1932 no less than 22½ per cent. of her imports by value consisted of coffee, cocoa and chocolate, tea, cane-sugar and rubber—products which presumably she will continue to buy abroad in much the same quantity as before.
>
> The same would apply with but slight qualification to textile raw materials and to the rest of the foodstuffs group. These categories accounted for $577,000,000 of imports, or 43.7 per cent. of the total. Of the remainder, a great part consisted of specialised manufactures with which American articles scarcely competed—otherwise they could not have scaled the high tariff.
>
> The problem is therefore principally one of the enhanced competition of American exports. For three commodities—tobacco, petrol and raw cotton—forming 36.5 per cent. of 1932 exports from the United States, the American supply is a leading determinant of the world price.
>
> Producers of these commodities in other countries may not sell any less in quantity on account of dollar depreciation, but unless there is organised with-holding of American supplied they are likely to have to accept lower prices. For wheat, which in 1932 formed 3.2 per cent. of American exports, the position is quite different, for the United States is no longer the predominant world supplier, and a higher price to American wheat farmers is the more probable outcome than a lower price to farmers elsewhere.
>
> The competitive classes include, inter alia, cotton yarns, piece-goods and manufactures; raw silk and silk fabrics and clothing; iron and steel bars, plates, rods and wire, and structural iron and steel; products of aluminium, brass and tin; anthracite coal; certain types of electrical apparatus; petroleum, dyes, fertilisers, paints and inorganic chemicals generally; and a wide variety of miscellaneous articles. It is in, some or all of these categories that we must look for the chief disturbance of international trade on account of an undervalued dollar.
>
> Any definite conclusions based on these facts would be pure speculation. It is certain that the American depreciation, in the absence of contrary forces, must exert some deflationary influence on the world price-level. It is certain, too, that, for a time, the competition of America will be enhanced in important groups of trades, in which her chief rivals are Great Britain, Germany, Japan, France and producers of American export staples—cotton and petroleum.
>
> On the other hand, a great deal of American export is distinctly non-competitive, at least as regards prices, and, moreover, costs have been rising in American manufacturing industry on account of the National Recovery Act. World trade will be disturbed, in short, by the fifty-cent dollar, but it will not be disorganised.

As the final word, that President Roosevelt has achieved only success, in however megre a measure, it may be mentioned that, since he inaugurated, the price index has risen 11.3 points. But, the President's object is to raise it, by 40.4 points, to the 1926 level of 100.

The unemployment relief has increased from $35,695,000 in October to $37,852,000 for November. In addition, the Government has, thus far, purchased 12,473,150 bushels wheat for unemployed relief.

Principally because of the Administration's monetary policy, the value of all crops, harvested by December 1, totalled $4,076,537,000 compared with $2,879,517,000 at the same date in the previous year.

FRANCE

The new French Government, with M. Chautemps as Premier, has taken the first few hurdles on December 2. The first two votes of confidence were based on a proposal that questions should be postponed, until after the Finance debate, and on a resotion, that Finance proposals should be treated as a matter of urgency. The Government had a thumping victory, the opposition votes being only 19 and 11 respectively.

When the debate on the Finance Bill began in the Chamber, the Socialists have decided to abstain from voting on contentious articles, as well as on the Finance Bill itself.

As pointed out in these columns some weeks ago, M. Chautemps belied the fears of the critics, who were numerous, by persuading the Chamber to vote for the Finance Bill. His diplomacy was further backed by the Deputies' fear of the public indignation over their ineffectiveness. The diplomacy of M. Chautemps is evident, when it is realised that the economies feature of the Bill, as well as that of taxation, has been narrowed, while that of special resources has been increased. The Deladier Bill provided for economies to the extent of 1,858 million francs; the Sarraut Bill to that of 1,661 million francs; and the Chautemps Bill to the tune of 1,225 million francs only. As for taxation, the Chautemps Bill provided for 1,995 million francs, as against 2,235 million francs in the Deladier Bill. But, as regards special resources, the Chautemps Bill provided for 1,528 million francs, while the Deladier Bill accounted for 1,331 million francs only.

The voting on article 6, of the Finance Bill, which provides for temporary cuts in the Civil Servants' salaries above 12,000 francs per annum,

was 403 to 63; and that on article 12, which provides for new taxation on sugar and by-cycles and reduces bonuses, paid to certain Civil Servants, was 292 to 224.

Of the total of 710,000 State employees, the proposed reduction under article 6 will affect 375,500 including Civil Servants, Army, Navy and Air Force officers, drawing over 12,000 francs per annum.

The Bill as passed in the Chamber, was radically changed by the Senate Finance Commission. But, M. Chautemps for-warned the Senate that any serious modifications in the Bill would end in another ministerial cricis. Accordingly, M. Bienvenue Martin, the President of the Radical Group in the Senate, which comprises 167 out of the total membership of 314, got the unanimous acceptance of his party to support the Bill, as it left the Chamber of Deputies rejecting the Senate Finance Commission's recommendations.

The result of the passage of the Finance Bill in the French Parliament certainly relieved the anxieties of the Treasury, which had been at its wit's end to keep the floating debt afloat. During the year 1934, the Treasury's obligations would be stupendous. Treasury Bills outstanding amounted to 12,000 million francs; advances to be made under legal enactments were 5,000 million francs; the loan maturities during the year amounted to 8,215 million francs and the joint railway deficit to meet which ultimately was the responsibility of the State, was 4,000 million francs.

But, the resources of the nation are strong. The nation's savings are computed to be still at the rate of about 20,000 million francs per annum, and its hoards to attain 38,000 million francs. Nothing short of a revival of public confidence can, therefore, rescue the Treasury. It is with a view to attain this result that the Chamber insisted upon balancing the budget more or less, and convince the public that the balance is near enough to reassure it. The French capitalist, especially the small one, is only eager to offer his money on loan under more or less safe conditions. The passage of the Finance Bill in the French Parliament is the ray of hope that will reassure him in entrusting his funds to the Government, which is already paving the way for authority to issue a loan of 10,000 million francs during 1934.

THE NEW MORTALITY INVESTIGATIONS

It is well known that the two fundamental principles on which life insurance level premium calculations are based, are the Mortality rates and the rate of interest which the accumulated funds are likely to earn. With the latter principle, we are not concerned at present. Mortality rates are important both in the calculation of premiums and in the finding of reserves required while valuing the liabilities of the company, on account of the fact that due allowance must be made for the chances of having to meet a claim by death in the first year and each subsequent year of assurance and for the chance of the life surviving the period in case of endowment assurances. So it is essential that the actuary should choose such a mortality table whose rates will closely approximate to those which will operate in the future and he should also take into account other circumstances likely to affect the future mortality in the particular class of lives for whom premiums are to apply. In the early history of life insurance in England, premiums were calculated by using Mortality tables derived from the census returns of the whole population. This was later found to be most unscientific as the class of lives taking up life insurance was decidedly a better one (having been taken in after a strict medical examination) than the whole population. Premiums derived from census mortality tables (particularly from the Northampton table) were found to be much in excess of the correct premium required for life assurance protection. So investigations of mortality rates among assured lives, were begun to be made. In such investigations the actual experience, of a number of life offices, of the mortality of their policyholders was used; and mortality tables of assured lives were published. The first of its kind to be used in U.K. was known as the "Seventeen Offices Table" published by a committee of actuaries in 1838. This soon became unreliable and out of date; and the "Institute of Actuaries Tables" was formulated on the experience of 10 English and 10 Scottish life offices. Four Mortality Tables were published by them; and the most important of them was the Hm table or the table pertaining to Healthy Males. This was used for a long time both for calculation of premiums and for life office valuations. Many Indian life offices also have utilised this Hm table and its modifications.

In the latter half of the 19th century even this was found to be out of date; and a Joint Committee of the Institute of Actuaries, England, and the Faculty of Actuaries, Scotland, investigated the Mortality among assured lives and published, during the closing years of the last century, what are known as "British Offices tables". As these Mortality Tables are the current tables used by all life offices in U.K. and in India at the present time, I propose to give a short description of this before proceeding to the subject of the new investigations in the Mortality experience of assured lives in U.K. Sixty British life offices contributed their experiences during a period of 30 years between 1863 and 1893. In volume of data used, they have never been exceeded so far as assurance experience is concerned. The mortality experience of more than one million lives assured were considered. Under-average and rated-up lives were excluded. The effect of selection up to 10 years after commencement of assurance was observed; and truncated tables, showing the effect of omission of 5 to 10 years after selection, were published. The with profit policies in all the main classes of policies (such as whole life, endowment, whole life limited payments, joint life, temporary and contingent assurances) are separated from those of without profits, male and female lives in each class being kept distinctly also. Different kinds of adjusted and unadjusted tables for various classes of policies under select, aggregate and truncated aggregate schemes were published. Exhaustive monetary values were also published. All the tables have the initial letter O as their significance, various suffixes and square and round brackets denoting the particular class of policy to which the tables refer. In conclusion, it may be said that it is a stupendous production and is much widely used by all British and Indian offices (the latter using the tables with addition of ages ranging from 3 to 10 to the tabular ages) The "British Offices" select tables are used in the calculation of premiums; and the aggregate tables are used in the finding of reserves required while valuing the liabilities of the office.

For more than three decades, the English life offices have been using the "British offices select tables" for calculating the premiums and the "British offices aggregate tables" for valuation purposes. It was soon realised, particularly by those life offices who were studying their own actual mortality experiences, that even the rates of mortality given by the Om table were much higher than that actually experienced. The results of the investigations undertaken by Messrs. Elderton and Oakley regarding the British life offices Annuitants' experience 1900-20 and the results of the Government Annuitants' experience 1900-20 clearly showed that there was decided improvement in the mortality rates of annuitants compared with the Oam and Oaf tables of the "British Offices Tables". Naturally, it was expected that there should be a corresponding improvement in the mortality rates of Assured Lives also. The two above mentioned Annuitants' experience 1900-20, not only showed improvements in the mortality rates of Annuitants compared with the Oam and Oaf tables but they also revealed progressive and gradual improvements during the interval under investigation when the rates were calculated under three distinct groups 1900-07; 1907-14; and 1914-20. This and the actual experience of some of the offices made the fresh authorised investigation of mortality among assured lives, imminent. The absurdity of continuing to use the Om and other connected tables for calculation of premiums (particularly the premiums of non-participating assurances) and for valuation of life office liabilities was clearly realised by eminent actuaries. Those offices, that have gathered definite data showing lighter mortality rates than those assumed in the calculation of their premiums, began to reduce their premiums for non-participating assurances. The question of premiums of with-profit or participating policies did not present so much difficulty, for an actual lighter mortality experience would finally result in a larger surplus and a larger distribution of bonus without in any way victimising the policy-holder.

Having realised the immediate needs of fresh and authenticated mortality tables of assured lives, a joint committee of the Institute of Actuaries, England, and the Faculty of Actuaries, Scotland, set to work for a detailed investigation into the mortality experience of assured lives, during the six years 1924-1929. Fifty English and Scottish offices contributed their experience by filling up elaborate details in cards and submitting them to the committee. It may be mentioned here that a plan for the continuous investigation of mortality of assured lives was formulated by both the Institutes as early as 1914, but the investigations could not be proceeded with owing to the interference of the Great War. Later the observations were begun with the year 1924 so that the statistics may refer to a recent period as far removed from the war period as possible.

The Joint Committee have concluded their labour and the new Mortality tables formulated by them were presented at a meeting of the Institute of Actuaries held two months ago. The results of the new investigation confirm the opinion previously held by all insurance experts that there had been a marked improvement in mortality as compared with the British Offices' experience 1863-1893. It is regrettable that this advance knowledge of the results of the investigations has not evoked any great interest in the British insurance circles. Perhaps the one main theme now occupying the sole interests of British insurance experts is the investment problems of life offices with the declining interest rate and the depreciating dollar. The committee have tabulated separate rates of mortality for with and without profit schemes for whole life and endowment assurances and for all other classes combined. The effect of selection was observed only for three years and select tables showing the effect of selection for three years and merging into an ultimate table are also published. The investigation further showed that the non-medically examined lives experienced practically the same mortality as those of medically examined. This remarkable feature of the investigations is indeed a justification of the system of dealing with proposals without medical examination by some life offices. The few offices that were doing this kind of business under some restrictions need no longer be afraid of freely issuing this class of policies with lesser restrictions. The improvements observed under the newly investigated tables can be clearly shown by the following tabular statements.

I. *Number of Persons dying from among 100,000 lives entered at each age during first year of assurance.*

Age			Om Select Table	New Table
20	...	...	261	160
30	...	...	312	162
40	...	...	438	244
50	...	...	746	455
60	...	...	1,499	1,155
60	...	...	1,499	1,155

II. *Number of Persons dying from among 100,000 lives where the duration of assurance is more than 3 years.*

Age			Om Select Table	New Table
20	...	...	664	255
30	...	...	757	241
40	...	...	986	388
50	...	...	1,546	764
60	...	...	2,907	1,975

The fuller details of the results of this recent investigation are expected with keen interest.

Before proceeding to consider what would be the effects of this much lighter mortality experience during the current and recent past years, on Indian life insurance business, it is very regrettable to note that India is still not in a position to have her own Mortality tables of assured lives. It is true that the growth of life assurance in India began rather late but I am of opinion that the time has now come when Indian life offices should seriously consider the idea of thoroughly investigating the mortality experience of their assured lives and formulating Mortality tables relating to Indian lives assured. India has not so far thought of a careful and detailed study of the mortality experience of her people either from the census returns or from the returns of life offices. It is only recently that Mr. L. S. Vaidyanathan, M.A., F.I.A., the eminent Indian Actuary was deputed to study the mortality experience from the 1931 census returns and he has recently published the results of his investigations. It is much desirable that the mortality experience of assured lives also should be studied and formulated from the experience of all the Indian life offices. Perhaps, it is the dearth of eminent and qualified actuaries in India that stands in the way of such an investigation. Anyway, it is high time that Indian life offices should think of having their own Mortality tables for calculation of their premiums and for valuing their liabilities. Whereas almost all English life offices have already reduced their premiums for non-participating policies anticipating a lighter mortality, it is of great interest to watch the steps Indian life offices would take in the light of this favourable situation to relieve the heavily-taxed non-participating policyholders.

We have received a copy of "Interest and Annuity Tables" compiled by Mr. Brajanandan Sahai, B. Sc., Agent, Trader's Co-operative Bank Ltd., Patna and an Ex-Director, B. & O. Provincial Co-operative Bank Ltd., Patna. The tendency of modern business development is to devise and find out more and more labour saving machineries. Western countries have so far developed in this direction that most of the routine calculation works including book-keeping and accounting are done there with the aid of machines. Though India is still lagging behind in this respect, there can be no denying that every business firm will welcome labour saving devices, for these not only enable to save money but are more dependable and accurate than personal work. In this respect. any contribution to the business world for saving labour and giving accurate and correct figures is bound to be popular. Mr. Sahai's "Interest and Annuity Tables", though not a new book in the line, will, we hope, be extensively used by the trading community particularly by the banking and insurance firms, to whom it will prove to be of immense value. Everybody knows the huge amount of interest calculations involved in the daily routine work of banking concerns and the use of books like this will not only serve as a time saver but will also make the results more correct.

The book opens with explanatory notes on the calculation of various functions involved in the tables such as calculation of simple interest, compound interest, present values, amounts of annuities, present value of Annuities, annuities to repay loans etc. Then the book gives a few preliminary tables for helping ; to convert annas and pies into decimals of a rupee, shillings and pence into decimals of pound; to find out the number of days from any day to any day; to find out the simple interest of 1for one day at different rates of interest per annum. Exhaustive simple interest tables for a sum of 1 for 1to 365 days at various rates of interest ranging from 1to 15 per cent. per annum are given correct to six decimal places of a rupee. Values of the various compound interest functions, such as amount of 1, present value of 1, amount of an annuity of 1 per annum, sinking fund payments to amount to 1 at the end of different terms, annuity to repay I with compound interest, are given for periods from 1 to 100 years and at different rates of compound interest ranging from 2 to 10 per cent. Besides the above important tables several other useful tabular statements are also given. The use of these tables is clearly explained in the beginning. We are told that the tables are done on a scientific basis of calculation and could with slight variations be utilised for calculations for all currencies of the world. The book is a neat and very useful compilation and is priced Rs. 2-8-0.

STATISTICAL INFORMATION

FOREIGN TRADE OF BURMA IN NOVEMBER, 1933.

The Report on the principal variations in the Foreign Trade of the Province of Burma during the month of November, 1933, as compared with the corresponding period of 1932, states that the combined value of Imports and Erports was Rs. 199.77 lakhs as against Rs. 209.92 lakhs showing a decrease of Rs. 12.15 lakhs.

IMPORTS

The total value of merchandise decreased from Rs. 73.74 lakhs to Rs. 71.65 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.
Chemicals, etc.—		
Sulphur (brimstone) ...	0.02	1.03
Machinery and millwork—		
Mining machinery, sorts ...	1.53	2.55
Textiles—		
Cotton piece-goods—		
Grey	0.03	1.44
Coloured	4.79	3.26

Tubes, pipes and fittings, wrought, to the value of Rs. 2.84 lakhs were imported during the month as against Rs. 0.80 lakhs recorded in the corresponding period of last year.

EXPORTS

The total value of Indian merchandise recorded during the month was Rs. 126.12 lakhs as against Rs. 136.18 lakhs, showing a decrease of Rs. 10.06 lakhs. The following articles accounted for the decreases, the value and the amount of decrease being noted against each:—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.
Paddy (Rice in the husk) ...	0.28	1.07
Rice not in the husk ...	51.24	4.44
Metals and ores—		
Zinc or Spelter, all sorts ...	3.65	1.35
Paraffin wax	14.35	3.94
Cotton, raw	11.48	2.36

The value of tin ore exported increased from Rs. 3.51 lakhs to Rs. 7.10 lakhs.

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned Railways for the week ending 2nd December, 1933 (35th week), amount to Rs. 171 lakhs, Rs. 3 lakhs MORE than the figures for the last week and Rs. 5 lakhs MORE than the figures for the corresponding week of the previous year and Rs. 8 lakhs LESS than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April to 2nd December, 1933, amount to Rs. 54.97 crores, or Rs. 98 lakhs MORE than the figures for the corresponding period of the previous year and Rs. 18 lakhs LESS than the corresponding period of 1931-32.

The following are the up-to-date approximate gross earnings of the State-owned Railways from 1st April, 1933, as compared with the actuals of the corresponding period of last year:—

Railways.	Up to 2-12-32 (in lakhs)	Up to 2-12-33 (in lakhs)
A. B.	105	102
B. N.	446	468
B. B. & C. I.	647	666
Burma	207	220
E. B.	320	335
E. I.	1,126	1,124
G. I. P.	726	739
M. & S. M.	430	456
N. W.	901	890
S. I.	358	354
Tirhoot & Lucknow Bareilly ...	113	119
Other Railways	20	24
Total ...	5,399	5,497

A comparison with the figures of the previous week for the principal State-owned Railways shows INCREASES in the approximate gross earnings of all railways except the B. N., Burma, and E. B. A comparison with the figures of the corresponding week of 1932, shows INCREASES in the approximate gross earnings of all the principal State-owned except the A. B., B. B. & C. I., E. B. and G. I. P.

During the week ending 2nd December, 1933, there were loaded on the broad gauge 78,116 wagons, being 2,720 MORE than in the corresponding week of the previous year, or an increase of 3.61 per cent. On the metre gauge there were loaded 49,923 wagons, being 3,430 MORE than in the corresponding week of the previous year, or an increase of 7.38 per cent.

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out

WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

Complete catalogue sent free on application.

COMPANY REPORTS

LOTHIAN JUTE MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	20,00,000	Block (net)	27,49,000
Reserve	20,03,811	Jute	11,54,517
Debts	1,44,349	Cloth & Bags	92,172
Profit & Loss	88,449	Stores & Spares	1,28,917
		Outstandings	31,769
		Cash & Invests.	80,234
Total	42,36,609	Total	42,36,609

Extracts from Director's Report:

Report for the half-year ended 30th November, 1933, showing a nett profit of Rs. 50,523-14-2.

After transferring Rs. 30,000 from Dividend Equalization Reserve and making sundry adjustments, there is a balance at credit of Profit and Loss Account of Rs. 88,448-8-3. The Directors recommend dividends—On Preference shares at Rs. 3-8 per share Rs. 35,000, and on Ordinary shares at Rs. 5 per share Rs. 50,000, the balance Rs. 3,448-8-3 to be carried forward.

In accordance with the agreement of the Indian Jute Mills Association, the mills have worked 40 hours per week with 15 per cent. of the total looms silent.—O. M. Jatia, David Ezra, S. K. Chowdhry, D. Wilson, Directors.

TALCHER COALFIELD, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	20,00,000	Block (net)	17,75,415
Reserves	12,950	Coal	108
Debts	1,05,124	Stores	18,255
		Outstandings	1,22,839
		Cash	1,76,995
		Profit & Loss	24,462
Total	21,18,074	Total	21,18,074

Extracts from Director's Report:

The Revenue Account shows a profit of Rs. 1,35,287-9-6 and the Profit and Loss Account, after crediting Rs. 1,730-1 on account of Interest, etc., charging thereto Directors' and Managing Agents' commission Rs. 16,404 and effecting provision of Rs. 54,797-6-9 for Depreciation, shows a balance at credit of Rs. 65,816-3-9. After deducting this sum from the amount standing to debit of Profit and Loss Account brought forward from previous year, this account shows a debit balance of Rs. 24,461-14-10 to be carried forward.

Comparative figures of Raisings and Despatches for the year under review and for the corresponding period of 1931-32 are set out hereunder:—October, 1931, to September, 1932—Raisings 145,960 tons, Despatches 145,863 tons. October, 1932, to September, 1933—Raisings 103,441 tons, Despatches 101,529 tons.—W. L. Armstrong, A. E. Mitchell, Maneck A. Davar, M. R. Sonthalia, Directors.

DELTA JUTE MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	19,00,000	Block (net)	14,92,933
Reserve	22,22,799	Jute	15,74,363
Debts	5,73,214	Cloth & Bags	1,26,814
Profit & Loss	1,65,654	Stores & Spares	2,42,867
		Outstandings	1,14,367
		Cash & Invests.	13,10,323
Total	48,61,667	Total	48,61,667

Extracts from Directors' Report:

Report for the half-year ended 30th November, 1933, showing a nett profit of Rs. 1,43,099-12-7.

After making sundry adjustments, there is a balance at credit of Profit and Loss Account of Rs. 1,65,653-13-6. The Directors recommend dividends—On Preference shares at Rs. 3 per share Rs. 15,000, and on Ordinary shares at Rs. 10 per share Rs. 1,40,000, the balance Rs. 10,653-13-6 to be carried forward.

In accordance with the agreement of the Indian Jute Mills Association, the mills have worked 40 hours per week with 15 per cent. of the total looms silent.—O. M. Jatia, David Ezra, S. K. Chowdhry, D. Wilson, Directors.

CALEDONIAN JUTE MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	19,00,000	Block (net)	28,57,000
Debentures	9,00,000	Jute	11,76,263
Reserve	30,85,811	Cloth & Bags	1,02,420
Other Debts	9,18,699	Stores & Spares	1,47,462
Profit & Loss	1,84,900	Outstandings	1,10,675
		Cash & Invests.	29,95,590
Total	69,89,410	Total	69,89,410

Extracts from Directors' Report:

Report for the half-year ended 30th November, 1933, showing a nett profit of Rs. 1,41,842-7-7.

After making sundry adjustments, there is a balance at credit of Profit and Loss Account of Rs. 1,84,900,5-10. The Directors recommend dividends on Preference shares at Rs. 3-8 per share Rs. 35,000 and on Ordinary shares at Rs. 12-8 per share Rs. 1,12,500, the balance Rs. 37,400-5-10 to be carried forward.

In accordance with the agreement of the Indian Jute Mills Association, the mills have worked 40 hours per week with 15 per cent. of the total looms silent.—O. M. Jatia, David Ezra, S. K. Chowdhry, D. Wilson, Directors.

ANGLO-BURMA TIN CO., LD.

The annual accounts to 30th June show a working profit at the mine of £21,734, as compared with £12,127 in the previous year. After providing debenture interest, depreciation, cost of prospecting and London expenses, the net profit was £10,959, against £2,883.

Adding the £496 brought in, there is a credit of £11,455, out of which the Directors recommend the payment of a dividend of 10 per cent. (against 5 per cent.). subject to tax. This dividend, with Directors' additional remuneration, will absorb £6,951, leaving £4,504 to be carried forward.

Total output was 438.12 tons (against 367.91 tons). The recovery at Heinda was 1.21 lbs. per cubic yard. Average working costs show a slight increase from 7.14d. to 7.51d. per cubic yard. Gross price received per ton of tin ore was £108-17 compared with £89-14-10. At the Thabawleik section work has continued under tribute and shows a profit of £1,115, against £809.

WORLD OF INDIAN FINANCE

Calcutta, January 12.

Considerable pressure was experienced in money market circles, due, it is believed, to movement of funds from Bombay to the cotton centres as a result of Japan's abandonment of the boycott of Indian cotton and her entry into the market. This would seem to be an indication that, unlike last year, cold weather finance will be marked in the current year by usual feature of monetary stringency. There are, however, no reasons to apprehend that the stringency would ever be of an acute kind. In the first place, demand for finance has arisen only in reference to one particular commodity, namely, cotton. The stringency of earlier years was caused by the coincidence of the movement of a number of crops. In the second place, prices of cotton and other staples are still on the extremely low side. Hence, the volume of finance required is on a correspondingly reduced scale. In the third place, the aim of the Government would appear to be to reduce the volume of Treasury Bills from the present figure of Rs. 30 crores to Rs. 20 crores by March 31.. In formulating his proposals in connection with the ways and means budget, Sir George Schuster stated last February that the floating debt was expected to stand at Rs. 28 crores at the beginning of 1933-34 and close at Rs. 20 crores by the end of the year. Every indication points to a genuine desire on the part of the Finance Member to carry out the programme as suggested at the time of the last budget. Over the last month, the weekly offer of Treasury Bills has been reduced, in the first instance, from Rs. 2½ crores to Rs. 2 crores and, in the second instance, from Rs. 2 crores to Rs. 1½ crores. We shall not be surprised if in the next week or two, the Controller of the Currency announces a further reduction to Rs. 1 crore. The Treasury Bills Maturities in January are of the order of Rs. 6½ crores; those in February come to Rs. 10½ crores and in March to Rs. 12½ crores. January and February are the best revenue months in the year; and it may safely be assumed that the excess of current revenue over expenditure should be sufficient to enable the Government to pay off Rs. 10 crores of the Maturities in this quarter.

In the fourth place, the technique of Government's monetary operations has undergone vast improvement during and since Sir Basil Blackett's time. Though the management is still in the hands of departmental officials, the ways and means adjustments in so far as they have a bearing on the money market, have tended to approximate to central banking practice. To the extent that there has been increased efficiency in this technique, the Government may be relied on to shape their policy and operations in such a manner as to avoid any undue squeeze in the market. We are, therefore, led to the conclusion that anything like the high altitudes of bank rate which we knew in the last decade need not be apprehended in the busy season of this year. This period of the year is usually described as the busy season from the point of view of trade and the stringent season from the point of view of money. From the standpoint of trade it is hardly possible to say that the present season would justify the appellation "busy". But it might turn out to be stringent, though the stringency would be of an extremely mild kind compared to conditions we have known in earlier years.

We have suggested that the weekly offer of three months' Bills may be reduced to Rs. 1 crore. In making this suggestion, we have not been unmindful of the fact that ways and means advances availed of by the Government from the Imperial Bank increased to Rs. 4½ crores in the week ended January 5. A good part of the rise in advances is to be attributed to the usual month-early disbursements. It is quite likely that the statement for the week ended Jan. 12 may show a part payment of the advances as revenue collections should have started exceeding expenditure. Another explanation for the increased advance on ways and means account is the larger purchase of sterling by the Government. By all tokens, purchases of Councils in the current week should be in excess of £1 million. On the weekly tender day, against £1 million on offer, applications at 1s. 6 1/16d., amounted to £28,620,000. Tenders received allotment on the basis of 3½per cent. From the colossal size of applications, we may draw two conclusions : (1) In the day or two prior to January 10, the Government would surely have received sterling at the tap-rate of 1s. 6 3/32d. ; and (2) it is also quite likely that the market would have sold sterling to the Controller of the Currency in the days following January 10. Anything like £½ million may thus have been bought by the Government at the tap-rate.

This is naturally a drain on the Indian cash balances of the Treasury. Depletion at this end means, however, swelling of the Home Treasury balance. From the figures given in our usual money market statistical section, it will be found that the balance with the Secretary of State on October 31 was £14.6 million. Allowing for the receipts from the last sterling loan on the credit side, and for the repayment of a sterling loan on December 15, the current balance should be sufficiently large to allow a transfer of a surplus to the Paper Currency Reserve if it be found that sterling purchases by the Government of India are so heavy as to result in a rapid deterioration of the cash position in India. Taking all circumstances into consideration, excessive purchases of Councils need not embarrass the ways and means position in India as a straight remedy is handy in the way of expansion of currency against deposit of securities in London branch of P.C.R. The increase in the ways and means advances owing by the Government to the Imperial Bank need not, for these reasons, alter our view that, consistent with the budget programme of ways and means, a reduction in the weekly offer to Rs. 1 crore will be both timely and useful. It will be timely because the financing of the movement of cotton will be facilitated from the funds released from Treasury Bills Maturities. It will be useful because it will enable the Finance Member to claim that his rough outline of the ways and means programme has been carried out in a way fairly approximate to original intentions.

NOTICE

It is requested that all payments, whether in respect of subscription or advertisements, be made by crossed and order cheques drawn in favour of the Managing Editor, "Indian Finance."

We may state for the information of all concerned that the only two person authorised to endorse cheques drawn on us are Mr. P. R. Srinivas and Mr. C. S. Rangaswami.

MANAGING EDITOR,
"Indian Finance."

Exchange has been quite firm, the quotable rate being 1s. 6 1/32d. Business has been done at 1s. 6 1/16d. There has been a hardening in T.T. rates for forward positions. An idea of the strong undertone of the market can be gauged from the fact that the allotment on the sterling tender day was so low as 3½ per cent. The firm conditions prevailing in the exchange market are due to the export bills emerging on account of Japan's purchases of East India Cotton, and to stringent money conditions.

The closing rates are: 1s. 6 1/32d., January-February T.T., with 1s. 6 1/16d., possible; 1s. 6d., March-April T.T.; 1s. 5 31/32d., May-July T.T.; and 1s. 5 15/16d., onwards.

Bills may be quoted: 1s. 6 5/32d., January; 1s. 6⅛d., February-April; 1s. 6 3/32d., May; and 1s. 6 1/16., onwards.

Money was in good demand and keenly bid for. The quotable rate was 3½ per cent for interbank money; ¾ per cent for Firms' call and three days' notice money. One month deposits quoted 1¾ per cent; two month deposits 2 per cent and three month deposits 2¼ per cent.

IMPERIAL BANK RESULTS

We are informed that the Governors of the Imperial Bank of India at the Meeting of the Central Board held at Calcutta on Friday, the 12th instant, declared a dividend to shareholders for the half-year ended 31st December, 1933 at the rate of 12 per cent per annum, payable on and after the 22nd January, 1934.

The profits available, including Rs. 26,94,800/- brought forward from the previous half-year, amounted approximately to Rs. 63,85,200/- which sum was disposed of as follows:—

I.	Payment of a Dividend of 12 per cent per annum (Free of Income Tax) ...	Rs. 33,75,000
II.	Transferred to Reserve Fund ...	,, 2,50,000
III.	Transferred to Pension Fund ...	,, 74,600
	Carried forward to next half-year ...	,, 26,85,600
	Total	Rs. 63,85,200

The average rate for Demand Loans during the half year was 3.5.

1677

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

FINANCE ABROAD

			Sterling dollar rate	Sterling franc rate	London price of gold
January	5	...	5.11¾	83.21	127s. 6d.
,,	6	...	5.11⅛	83.15	126s. 11d.
,,	8	...	5.07¾	83.53	126s. 8d.
,,	9	...	5.09⅛	83.28	126s. 8½d.
,,	10	...	5.09	83.28	127s. 1d.

The week has seen a slight recovery of the dollar from 5.11¾ to 5.07¾ though during the last two days of the period under review there has again been a setback to 5.09. The franc came down to 83.53 on January 8th but later recovered to 83.28. On the other hand, the international exchanges have displayed comparatively greater stability than one had reason to hope some time ago. Towards the middle of December there was widespread apprehension that Mr. Roosevelt might make a startling Christmas present to the world of international finance by the announcement of some sort of change in his financial programme. The last half year has fairly accustomed the world to Mr. Roosevelt's ways of making minor changes in his monetary policy with the most elaborate and dramatic setting. And it was believed that before the meeting of Congress he would make another announcement which, without disturbing considerably his own internal position, might for a time at least have a spectacular effect abroad. All these expectations have been belied and the announcement in regard to the purchase and coinage of silver mined in America is all that the American President had to give to a nervously expectant world. Even soon after the announcement there was little mistake about its actual significance to the silver market and even more so in respect of the currency and exchange position in the world.

But the announcement in regard to silver is significant for the manner in which Mr. Roosevelt is trying to tackle the politics of the monetary situation in America. By this dramatic gesture to the numerous American enthusaists in the cause of silver, Mr. Roosevelt has ensured for himstlf the support of perhaps the most influential section of American financiers and politicians. It is already reported that those senators, who had, during the past few weeks, prepared some kind of bill or other for the purpose of resuscitating silver, have agreed, in consideration of the action of the President, to put them by and actually co-operate with President Roosevelt in the success of the plans he has outlined for himself. Senator Thomas, for instance, has agreed to withhold his plan. Mr. Wheeler has agreed to consign his bill, on the free coinage of silver at a ratio of 16 to 1, to the background. And the trend of opinion is going away from paper money towards gold and silver revaluation, though the hankering after a modified form of bimetallism still continues. It is reported that Senator Thomas is in favour of a return to the gold standard as soon as the international situation permits. But it is very significant of the President's ascendancy that Senator Borah is advocating the holding of a White House conference between the inflationist and the hard money schools, with the President as umpire, in order to end the dispute.

It will, thus, be seen that the action of President Roosevelt in regard to silver has consolidated the President's position in American politics and has enabled him not only to control the position that was crystallising itself in his monetary policy but also to acquire widespread support for the many innovations, with which his brain is still teeming, in regard to the general recovery programme. Our Overseas columns make reference to some of these innovations and a cable report during the week also refers to the creation by the Government of a new corporation to facilitate the development of foreign trade which has been recommended to President Roosevelt by Mr. Peek, a former Farm Administrator whose proposals were supported by Prof. Tugwell and other members of the Brain Trust. Mr. Peek is of opinion that all Federal agencies concerned in the promotion of foreign trade should be coordinated closely under the new corporation which will be empowered to negotiate directly with foreign governments. Mr. Roosevelt is also reported to be contemplating the acquisition of a free hand in respect of tariffs for negotiating reciprocal trade treaties with all the important trading nations. And above all, there is the new budget with the colossal deficit to be put through the Congress. For all these achievements, the silver announcement will stand the President in good stead. And there is ample evidence that during these months the popularity of the President has been rapidly on the increase, inspite of all the unbridled criticism with which his various measures have been visited from all sections of the so-called public opinion. A special cable to the *Statesman* points out that the commanding feature of the opening days of Congress is the growing power of President Roosevelt over public opinion and the nervous recognition that the power of the Congress is not what it was. The speaker of the Lower House has told the members that there would be tariff legislation if President Roosevelt wants it. Even veteran senators like Mr. Borah will, it is believed, find it difficult to withstand the personal ascendancy of Mr. Roosevelt.

This reassurance in regard to the political prestige of Mr. Roosevelt gives rise to two sets of ideas. Firstly, that most of the reports about the failure of the recovery programme and the growing hostility of public opinion to the President's measures have been due either to innocent ignorance or malevolent propoganda. And one can be sure that when the President's measures are calculated to disturb so much the even tenor of ordinary economic life the public is unlikely to accord its support unless it brings any tangible good to them. It is difficult to explain the popularity of the President in the face of all the tearing propaganda and the wild criticism except on the basis that the conditions of living for the masses have been improved as a result of the measures of recovery. Secondly, for those who believe, and with reason, that no reorganisation of international finance would be possible without the consent and cooperation, if not the actual initiative, of the American Administration, it is certainly reassuring to be told that, practically speaking, the President would not be confronted with any political obstacles in the way of bringing about cooperation among the nations. It is perhaps on this basis that rumours have already been set afoot that at the beginning of February the dollar will be devalued and stabilised at its current foreign exchange value.

Our Overseas columns will show that there is an immediate incentive for President Roosevelt and the American Administration to hasten the achievement of devaluation. Though the Government stands to gain a goodly sum by way of a legal revaluation as a consequence of the devaluation of the dollar, it should be easy to recognise the dangers of President Roosevelt embarking on the stabilisation of the dollar without coming to previous understanding with France and Great Britain and such other countries as count in these affairs. For, once the gold value of the dollar is known it would be easy for other countries, anxious to compete with America in currency depreciation, to take the external value of their own currencies to a lower level and thus foil the efforts of President Roosevelt. It may be said, therefore, that if President Roosevelt is anxious, both in the interests of the gold profits and in the interests of world economics and finance as a whole, to hasten the stabilisation of the dollar, he would, without further delay, begin negotiations with Great Britain and France for an understanding in regard to currency and exchange.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicalitv.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, January 12, 1934.

The rise that took place during the previous week was more or less well-maintained during the current week although the turnover 'of business was not so large. During the middle of the week tendency for taking profits was marked. After that fresh buying interest was noticeable and values in almost all the sections were tending to advance. Business in 'paper' was done upto Rs. 83-8 Howrahs touching Rs. 52 coal shares had not much to report, however teas had a fair attraction. The miscellaneous had a very long list of transactions to record. Sugars being one of them.

3½ per cent. was changing hands at Rs. 83-7 new loan 1947-50 being quoted at Rs. 95-4 and 1960-70 at Rs. 99-2.

Amongst jute Howrahs crossed Rs. 52-8 and Kamarhatty created a fresh record of Rs. 545 Anglo-India were marked at Rs. 342| Belvedere at Rs. 360 and New Central at Rs. 372. Coals were steady Burrakur marking upto Rs. 15-4 and Equitable at Rs. 22-4. East India came to deal Rs. 19 Bengal quoting Rs. 245 Standard came to business upto Rs. 32-6.

Teas had a better enquiry over the previous weeks. Bisunath were dealt at Rs. 26-10. East India Rs. 15. Pusseimbing at Rs. 7-12, Ethalboric had a good enquiry at Rs. 9-8 and Hathimara at Rs. 39-8, New Terai were at Rs. 14-4.

In the miscellaneous section Sugar shares were slightly better over the previous weeks, Samastipur coming to business at Rs. 12-12, Carew & Co. at Rs. 16-12 and Cawnpore at Rs. 13-8. Champaran were dealt in at Rs. 23-4. Bengal paper were marked up to Rs. 69-12. Kesoram had a business up to Rs. 3-8 a new record for a long time. Dunbars also came to deal up to Rs. 115. Indian Iron and Steel were in good demand at Rs. 4-14 and Bengal Iron at Rs. 3-6 Titagarh Paper deferred came to business at Rs. 5-12 and the Preference at Rs. 131.

THE MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras. 11th Jan. 34

The securities market ruled steady during the week under review. 3 1/2% paper fluctuated within narrow limits while 4% 1960-70 loan was a firm spot at Rs. 99 with good business done at this level. Lack of scrip in the short and medium dated loans hampered business, excepting for a line. 4% 1934-37 loan which changed hands at Rs. 100/8 with good buyers over. 3½% 1947-50 loan was a bright feature at Rs. 95/5 and closed firm amongst State Loans. 4% Mysore 1953-63 met with considerable business at 100/4: 5½% 1938 at 109/4 and 61/4% 1940 at 115/8 whilst the 5% Cochin 1943-53 loan was taken up at Rs. 103. There were several buyers for Madras Corporation Debentures with none offering. Amongst Joint Stock Company Debentures United Nilgiri 1936 Debentures were wanted at par with no sellers. The preference share market was steady with no quotable alteration in rates. Banks were dull except for centrals and Indian Banks Rs. 50 Paid were transacted at 92/8 with buyers over. State Aided Banks weakened to Rs. 15 and looked like moving down. Amongst Cotton Mill shares Buckingham Carnatics were taken up at Rs. 180 and Cambodias at Rs. 9/4 .

Kaleeswarars had several sellers at Rs. 292 with buyers uninterested. Electrics were steady; Vellores on the declaration of the 5% per annum tax free interim dividend were in good demand at par and at the close had buyers at par ex-dividend; Trichy Srirangam had sellers at Rs. 145; Rangoon electrics were wanted at Rs. 23 with no scrip available. Cement shares were a bright counter with Indian Cements; Katnis and Shahabads popular, the close being firm Punjab cements were also bought up to Rs. 15. Sugars were steadier, Decan sugar big shares noted deals at Rs. 257-8 with further shares in request; Mysore sugars were taken up at Re. 1-8 Premium India Sugars were on offer at a small premium without exciting any buying enquiry. The Planting section was active though rubbers were dull. Peermades had buyers up to Rs. 23 and Periaramalais up to Rs. 35. Highland Produce shares were a feature rising to Rs. 15-4 at the close whilst United Nilgris maintained their previous level. The Miscellaneous section was devoid of interest.

BOMBAY STOCK EXCHANGE

(By Wire)

(From our Correspondent.)

Bombay, January 11, 1934.

Securities: Giltedged securities ruled steady during the period with little changes in rates. Government three and a half per cent. loan experienced on *Friday* heavy liquidation; and on Tuesday there were considerable selling on Calcutta's account. Nevertheless its rate remained pretty firm on good support, induced by higher London advice and lower rate of interest paid for treasury bills this week. From its last close at Rs. 83-5 it touched lowest at Rs. 82-14 and highest at Rs. 83-9 to close to-day at 83-7.

Shares: In Bombay sharebazaar fluctuations were two-sided and scale of business was large; but the bulk thereof was on brokers account. In sympathy with the strength in Indian cotton rates, leading mill scrips showed some improvement. On the other-hand, big power shares, in view of dwindling revenue and owing to closure of many mills, weakened to some extent. Cement group remained quiet and Tata Steels were steady; but Bombay Burmahs formed the centre of attraction due to various rumours. Movements in prices of important scrips are tabulated below. Bombay dyeing close on January 4 762/8 Highest 767/8 Lowest 762/8 close to-day 767/8; Century 183/9 200 193/2 197/8; Nagpur 236/14 250 236/4 240; Andhra Valley Ordy. 1337/8 1340 1321/4 1325; Tata Power Ordy. 935 942/8 906/4 915 Tata Steel Ordy. 52/4 53/2 51/10 52/8: Tata Steel Ordy. deferred 205/10 215/10 205/10 208/12 Tata Steel second preference 113/2 116/4 113 114/2 Indian cement 283/12 285/10 281/4 281/44. JUTE AND JUTE GOODS

JUTE

Calcutta, Jan. 11.

During the current week the jute market has ruled steady but quiet. During the earlier part business in loose jute was done on the basis of Rs. 4-12 and Rs. 4-4 for Jat LR and XLR sellers asking 2 annas more. May Futures touched Rs. 32-8 the tone of the market towards the close being rather easy on profit taking and long liquidation. The undertone of the market is however steady. The highest and lowest of May Futures were Rs. 32-12 and Rs. 31. Sellers are showing more disposition for business towards the close, buyers holding off at a rise.

JUTE MANUFACTURES

Calcutta, Jan. 11.

During the earlier part of the week further rise took place in the values of hessians and business in nine and eleven porters was done at Rs. 10 and Rs. 12-8 respectively. Business in B. Twills was done at Rs. 24-4 and Liverpools at Rs. 27. Towards the close there has been an all round easier feeling and values are lower from the top. The undertone of the market is healthy.

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From our correspondent)

Bombay, Jan. 11.

Reports of steady improvement in textile business, strong belief in drastic reduction of cotton production in ensuing season and imminence of various developments have been causing American cotton prices to rise steadily. In local market, after the recent rapid advance owing to the completion of agreement with Japanese, some reaction was anticipated but it has not materialised. With daily advancing American prices reactionaries are being forced to cover again their hasty sales. Frightened option dealers and heavy purchases have helped the advance in cotton prices materially.

On the conclusion of Indo-Japanese settlement and better New York advices a further rise in cotton, as anticipated has taken place. Broach April/May after touching Rs. 198 is steady at Rs. 195. There has been a reactionary tendency on the rise but the general feeling is to buy at dips. The removal of ban in imports of Indian Cotton must in the long run help to sustain the improvement in the cotton market.

PIECEGOODS

So far the values and fresh business is concerned there has been very little change in the market during the period under review. The most important event has however been the conclusion of the Indo-Japanese settlement. The uncertainty that has hanging over the market for such a long time has been removed. The merchants now feel safe since there are no disturbing factors in the trade in near future. There has been no fresh business in Lancashire goods since the latter are very stiff in their idea of prices.

The following is a brief summary showing the actual number of yards and the equivalent in packages that Japan will be allowed to export under each of the four categories always provided, of course, that the necessary purchase of raw cotton *viz.*, 1,500,000 bales has been made which permits of an annual quota not exceeding 400,000,000 yards:—

QUOTA

Plain Greys	45	180	90
Bordered Greys	13	52	26
Bleached	8	32	16
Coloured and others	34	136	150

Ten per cent lattitude is allowed in case of Greys and 20 per cent. in that of Bleached and Coloured goods.

DUTY

The imports duty on the Japanese cotton piecegoods will be reduced from 75 per cent. to 50 per cent. The reduction is not confined to Japan alone but is applicable on imports from other foreign countries as well.

YARNS

Very steady conditions have prevailed in this section with a larger turnover in business. The new season is fast approaching; dealers are very likely to place fresh orders in near future.

Apparently no protection is being afforded to the indigenous yarn industry under the new trade treaty in spite of the many representations made to Government to save the present deplorable position brought about by unfair competition. To all intents and purposes, importers of Lancashire productions have been out of the market, as existing replacing costs do not permit of forward transactions at the present time, being as they are, above ready rates.

BULLION

GOLD

By Wire

(From Our Correspondent)

Bombay, January 11, 1934.

Gold prices in local market also ruled comparatively quiet. The franc rate improved from its previous close of 82.84 to 83.58 and receeded back to 83.28. Local rate for ready gold declined from its last close at 31/7/6 to 31/4 and was being quoted at 31/15 at 5-30 p.m. to-day.

Gold: After being easy during the earlier part of the week the market has improved towards the close Bombay Mint Gold quoting Rs. 31-6 for ready and Rs. 31-7-6 for settlement. There has been a similar advance in London Gold values improving from £6-7-3 to £6-7-6. Sovereigns have in sympthy improved from Rs. 20-0-6 Rs. 20-1. Shipment of gold per s s. Ranchi has amounted to Rs. 16.61 lakhs. Stocks in Bombay are pretty heavy at 11 lakhs tolas. Daily offtake is no better than 3,000 tolas.

LONDON (Air-Mail Week)

Gold reserve against notes of the Bank of England was £190,723,573 on the 20th December, showing an increase of £85,200 over the previous Wednesday's figure.

The supply in the open market was readily taken up by the usual quarters. The price was very steady, but the premium over the franc parity was lower, due to substantial supplies during the week.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 18th December to mid-day on the 23rd December:

SILVER

(*By Wire*)

Bombay, Jan. 11.

Silver: London spot rate for silver moved only between 19⅛d. and 19 1/16d. during the period. Local market was entirely lifeless though the burdensome stocks induced Chokseys to sell frequently at every small advance. Rate for ready silver declined from its past close of 54/4 to 53/14 and again steadied at 54/1, which was the rate to-day at 5-30 p.m.

Silver: During the earlier part the market was rather steady, declining however towards the close on profit making. The rise was due to the rise in Newyork quotations rather than to any improvement in the local situation. The highest and lowest price of the week was Rs. 54-11 and Rs. 54 respectively. Stocks in Bombay are estimated at 9,000 bars while in Calcutta at 1,000 bars. Daily offtake however continues poor at about 25 bars.

LONDON (Air-Mail Week)

The week under review had only four working days due to the Christmas holidays. Still there was a great deal of activity in the market because of the news regarding ratification by President Roosevelt on December 21st, of the Silver Agreement reached at the World Economic Conference in last July. The effect was greater due to the simultaneous announcement of the authorization given to the United States Government to purchase 24,000,000 ounces of domestic silver at 64½ cents per ounce, this quantity being also the approximate annual production of that country. One half of this silver is to be coined and the other to be held by the Treasury as a reserve.

In the London market general buying followed this news. In spite of China keeping aloof a strong demand was forthcoming from the Indian Bazaars America and the speculators. Sellers being naturally inclined to hold back, the quotations were forced up from 18 9/16d. for both deliveries on the 21st to 19 1/16d. for cash and 19⅛d. for two months on the 22nd. Business was done even above the official quotations in the afternoons. But on the following day there was a reaction prices losing ¼d. due to hesitancy of buyers.

A rise in prices in the world markets does not appear to be justified because the purchase by the U. S. Government is restricted to silver produced in that country. Speculative buying on the hope that something will be done for the advancement of silver and the poor offtake have contributed to an accumulation of stocks. There being no lack of silver, the effect of the withdrawl of 24,000,000 ounces has been discounted already.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 18th December to mid-day on the 23rd December:

TEA

Sale No. 28 was held on the 8th and 9th January when 21,700 packages of tea with export rights, 8,600 packages of tea for home consumption and 10,000 packages of tea dust were sold at annas 0-11-0, 0-5-2 and 0-5-10 per lb. respectively.

Opening after the holidays the market was very steady. Prices advanced fully by an anna per lb. above the rates ruling before the holidays. The quality offered was re-presented by an average selection from all districts. Demand for tea for internal consumption was also very good, the change in prices was however negligible. Dusts of all types were in strong demand prices tending to advance.

The following are the full particulars of sale No. 28.

Teas with Export Rights

	1933	1932	1931
Offered	22,432	33,000	28,200
Sold	21,777	31,650	24,525
Average	0-11-0	0-4-7	0-6-3

Teas for Internal Consumption

	Leaf	Dust
Offered	9,212	10,194
Sold	8,699	10,147
Average	0-5-2	0-5-10

INDIAN TEA SALES

At the London auctions on Jan. 8. 27,000 packages of Indian tea were submitted for sale.

The market was active, with a strong demand at generally firmer rates.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 11½d., to-day's auction 12½d. per lb.; Common Broken Pekoe last auction 12¼d. to-day's auction 13d. per lb.; Common Orange Pekoe last auction 12¼d. to-day's auction 12½d. per lb.; Common Broken Orange Pekoe last auction 12¾d. to-day's auction 13¼d. per lb.; Common Broken Pekoe Souching last auction 12¼d., to-day's auction 12¾d. per lb.

The following are the value prices:—

Clean Common Pekoe last auction 12⅜d. to-day's auction 13⅛d. per lb.; Clean Common Broken Pekoe last auction 12¾d., to-day's auction 13¼d. per lb.; Clean Common Orange Pekoe last auction 13d., to-day's auction 13¼d. per lb.; Clean Common Broken Orange Pekoe last auction 13⅛d. to-day's auction 13½d. per lb.; Clean Common Broken Pskoe Souching last auction 12¾d. to-day's auction 13d. per lb.

CEYLON TEA SALES

At the London auctions on Jan. 9. 16,100 packages of Ceylon tea were submitted for sale.

There was a good general demand for the offerings and prices generally displayed a steady tendency.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 12¾d., to-day's auction 13½d. per lb.; Common Broken Pekoe last auction 13d., to-day's auction 13½d. per lb.; Common Orange Pekoe last auction 13½d., to-day's auction 13½d. pe lb.; Common Broken Orange Pekoe last auction 13¾d. to-day's auction 14d. per lb.

The following are the value prices:—

Clean Common Pekoe last auction 13¼d., to-day's auction 13⅝d. per lb.; Clean Common Broken Pekoe last auction 13⅜d. to-day's auction 13⅞d. per lb.; Clean Common Orange Pekoe last auction 13⅞d. to-day's auction 14d. per lb; Clean Common Broken Orange Pekoe last auction 14d., to-day's auction 14½d. per lb.

GRAINS AND SEEDS

WHEAT

During the period under review the market has ruled quieter and values on balance for Beta may as well as readies are more or less unchanged. The weather conditions in the wheat growing districts have been very favourable except for the recent cold draught and pest which as a matter of fact had a very little effect on the market. The stocks of Wheat are plentiful and last years surplus in no way encouraging for a bull market. Rice market is very dull and naturally reflects its weakness on the wheat market. In spite of these factors being bearish for wheat it must be remembered that after all wheat prices are low and in general sympathy with other commodity markets there is more room for a rise than for a fall. With small risk it is better to be a bull than a bear.

Bees Wax.—Crude Rs. 34 to Rs. 35 per md. Refined white Rs. 41 to 42 per md.

(*Continued from page 81*)

arrangement, taluk boards could have obtained a maximum amount of Rs. 16 lakhs from the optional cess, whereas they now get only Rs. 11 lakhs and even this will gradually be transferred to panchayat boards as more and more panchayats come into existence. Thus a large number of taluk boards have suffered an immediate loss and taluk boards as a whole stand to lose a potential income of Rs. 16 lakhs, as a result of the revised arrangements.

In such a situation the abolition of tolls as a result of the Madras Motor Vehicle Taxation Act, 1931, deprives district boards roughly of 50 per cent. of their annual income under the head for Motor Buses for contributing the substantial amount to the funds of district boards in the shape of licence fees; and there has been a serious fall in this source of income also as a considerable number of buses have, owing to various causes, been taken off the road in the last two or three years. The position of the taluk boards may be sketched thus:

Prior to the Madras Local Boards Amendment Act of 1930, there were only 130 taluk boards, or roughly one for each revenue division. According to the Act as amended, a taluk board should ordinarily be created for each revenue taluk. The number of taluk boards thus increased from 130 to 208 with a corresponding increase of expenditure under establishments, travelling allowance and contingencies. This has had a further adverse effect upon the finances of the taluk boards.

On the repeal of the Village Panchayat Act of 1920, all panchayats became regular local boards under the Madras Local Boards Act. Specific sources of income were also assigned to these panchayat boards. In addition to a share of the land-cess panchayats are now credited with the receipts from profession tax, licence fees during fairs and festivals, markets, carts-stands and slaughter-houses. The total number of panchayats already excceeds 5,000 and is likely to increase. Taluq Boards will thus gradually lose their income from the above sources.

The Government have therefore now decided on three principal measures namely (1) abolition of taluk boards, (2) abolition of the village development fund and (3) the splitting up of district boards. As there is no service performed by a taluk board which cannot be taken over by a district or panchayat board the Government take the view that the duplication of control causes avoidable waste of public fund. As the interests of the taluk boards are diametrically opposite to those of panchayats it is futile to hope that the taluk boards would be instrumental in the expansion of panchayat boards. Thus one of the main objects of local government would be frustrated if the financially weak taluk boards were to be allowed to be continued as part of the system of local government. It is therefore proposed to abolish taluk boards and transfer all their functions to district boards except taluk libraries in panchayat areas which will be transferred to panchayats. It is estimated that if the taluk boards are abolished, the net gain to district boards would amount to 8.87 lakhs. The Village Development Fund has come within the scope of the present reform as the services for which the expenditure can be incurred from the fund are also services allotted either to panchayats or taluk boards or district boards. It is therefore considered advisable that with the abolition of Taluq Boards, the village Development Fund should also be abolished and that the income from the three pies ces now credited to this fund should be distributed between the district boards and the panchayats. The Government have decided to split up the district boards as it is considered necessary to constitute small units as to make supervision and inspection of schools and panchayats possible. As part of the scheme of reorganisation the Government have also found ways and means of economising the officials under local bodies but should render the same service for a wider area than heretofore.

EUROPEAN COMMERCE

The annual session of the Associated Chambers was held in Calcutta this week; and it was the first occasion in Lord Willingdon's regime when His Excellency was able to be present at the conference for the opening of the proceedings. Till two years ago, the Federation of Indian Chambers was also fortunate in an annual contact with the Viceroy. Due to the attitude of the latter towards the Round Table Conference, not only the Viceroy but members of his Executive Council have refrained from attending the annual Delhi session of Federated Chambers. We understand, however, that efforts are now being made to re-establish the old custom. While, in one sense, the deliberations of these two bodies tend to become extremely formal, and to be void of a good measure of liveliness owing to the presence of distinguished officials, there is a great deal to be gained from the opportunities offered for exchange of ideas between representatives of the Government and leaders of the business community over a variety of questions that engage public attention. It has so happened that the matters that are thus brought forward for discussion have, in the present stage of India's constitutional development and economic progress, pertain more or less to defence of vested or existing rights on the one hand or soliciting for this concession or that on the other. Neither the Associated Chambers nor the Federated Chambers have so far addressed themselves to the evolving of a comprehensive programme or a self-contained plan in relation to which the resolutions that are annually brought to discussion will have a deeper significance and fuller value.

* * *

We have felt it necessary to draw attention to those in charge of the destiny of these bodies to a serious defect in their organisation, and that defect is the absence of an adequate, competent and suitable Secretariat, with experts in relevant sections being available as occasion demands. If we are not mistaken, the Associated Chambers have not much of a Secretariate of their own. They lean, in most matters, on the Bengal Chamber Secretariat. But, for a body which has necessarily to deal with All-India problems of wider import and greater complexity, assistance of a parochial chamber, however efficient otherwise, could not at all be considered satisfactory. The Federated Chambers are no better equipped in this regard. The Government of India, after considerable hesitation and cogitation, have decided on concerting measures for the compiling of better, fuller and more authoritative statistics bearing on national economy. It is now recognised, on all hands, that in dealing with the new age in which economics has pushed politics to the background, the existing organisation of the Government is ill-equipped. Proposals towards the remedying of this deficiency have received consideration, though only in a fitful way. The suggestion for establishing economic councils went to the stage of an expert like Sir Arthur Salter being invited to study the situation on the spot and to make recommendations. Though nothing has been done—but this should not be a matter for surprise to those who know what is the usual fate of the recommendations of most committees of enquiry in this country—the point we seek to urge is that there exists to-day a more live and more widespread consciousness of the imperative urgency for those changes in the administrative machinery that are necessitated by the shift of emphasis from politics to economics. Our All-India bodies representing commercial opinion should likewise realise that the day is past when all that they had to do was to air their grievances or petition for sundry advantages.

* * *

Our attention was drawn last year to the fact that of the resolutions brought forward in the annual session of the Federated Chambers, even the wording in some cases required correction and touching up. All-India bodies of this nature cannot receive due recognition or compel attention unless their organisation is brought up to date and in conformity to the changing needs from time to time. We would like to see the Associated Chambers and the Federated Chambers developing into some kind of non-official economic councils. That is the objective which they should keep in view. It is with that objective in mind that a competent staff should be selected and trained. There is no dearth of young men with good academic training who should prove excellent raw material from this point of view. We would go further and suggest that, as was once contemplated in regard to the issue of a monthly statistical bulletin under the joint auspices of the Government, the Federated Chambers and the Associated Chambers, efforts should be made on a co-operative basis for the gathering together of a staff that could tackle, copetently and fruitfully; problems arising from the universally-recognised need for a comprehensive and scientific economic plan. Economic Planning is the order of the day. The era, the advent of which we celebrated on the eve of the New Year, is one in which the full implications of economic Planning will have to be understood and worked out. In an era of this nature, All-India commercial bodies will have to play an important part. And they cannot play that part unless serious attention is given in time to the suggestion which we have ventured to put forward.

* * *

We are, therefore, extremely gratified to find His Excellency urging, in the course of his speech before the Associated Chambers, a strong plea for the increasing and strengthening of the bonds of partnership between Englishmen and Indians. In commending this proposition to the earnest consideration of his fellow countrymen, Lord Willingdon made it clear that action on the lines indicated by him was essential in the interest of all concerned "and not the least in your own." It was only six weeks ago that the Governor of Bengal voiced openly his discovery that terrorism in Bengal is not unconnected with middle-class unemployment in the Province. The Viceroy has reiterated the idea. His Excellency showed a correct appreciation of the psychology of young men when he uttered a warning against the "danger of under-estimating the appeal which the crudest economic theories make to the uneducated or half-educated, and particularly to those who are not getting adequate opportunities under the present system." If a man thinks he has nothing to lose but his chains, is it difficult to persuade him that any change must be for the better? If civilisation is to be conserved, it must make life worth living not only for the higher strata of society but for the people as a whole. Life has certainly not been worth living for the labourers in the industrial centres, nor for the toilers on the soil, nor for the educated middle classes. His Excellency has not referred to the toilers on the soil. But referring to industrial labour, the Viceroy drew attention to the most pressing needs of the worker, better housing, greater security, improved health and the development of the corporate and civic sense. If only the employers pay increased attention to the human aspect of the industrial organisation, it is bound to give ample return both in material prosperity and in the more lasting satisfaction that comes from every attempt to serve one's brother.

* * *

Lord Willingdon spoke with real feeling on the curse and tragedy of middle-class unemployment:

> "Hundreds, nay, thousands of young men, find themselves to-day without adequate opportunity for occupation and it is little to be wondered at that some of them afford a fruitful soil for those whose culture takes the form of direct action of a revolutionary character."

Lip sympathy has been offered in profusion. Committees, official and semi-official, professing to tackle the unemployment problem, have issued elaborate reports. But everyone has been in the mood to suggest that it is the other man who has to take a move in the matter. When one is cornered, one is ready with the answer: "What can individuals do? This malady can only be cured by remedies so sweeping and drastic as to be quite beyond our power and by alterations going far deeper into social and even religious systems. Oh! no! there is little we can do." To such as would be ready with an evasive reply of this character, Lord Willingdon makes an earnest appeal:

> "I suggest to you as employers and particularly to those of you who are British, that it is of the utmost importance to provide what opportunity you can for the employment of young Indians. I am one of those who believe that India will need and will welcome, for very many years to come, the business experience and business gifts of Englishmen, which have done so much to develop industry in the past. But that experience and those gifts will be fully effective only in co-operation with Indian enterprise and talent, and the aim should be to increase and strengthen the bonds of partnership in every way possible."

This appeal to employers—"particularly to those of you who are British"—has come not a day too soon. "Discrimination" is a word that has been in frequent and frenzied currency in recent times. While the Indian extremists of the S. N. Haji school have only been talking of discrimination against non-nationals in the future, the British extremists in India have been, in actual fact, practising discrimination against our nationals in the long past and the very present. Exchange banks will not admit Indians to any rank beyond routine running of quills. We have known instances where orders were passed, in black and white, that for so paltry an appointment as Personal Assistant to the Chief Boss, Indians should be kept out. Evidence was given before the Banking Enquiry Committee to show that European exporting houses had curtly told brokers that goods manufactured by Indian-owned jute mills were taboo. When we are taunted with seeking to spoliate, discriminate and expropriate, we may, with perfect truth, answer that the boot is on the wrong leg. His Excellency's remark was less an advice than an admonition. Were he in the mood to avoid being unduly polite, he could have said: "*You* have been discriminating against Indians. *You* have been ill-using Indians in their own country. *You* have established and perpetuated a caste made up of yourselves and yourselves alone. *You* have maintained a close preserve and been fighting for its continuance. It is this kind of discrimination that has generated friction, created rancour and driven Indians to a feeling of hopelessness and despair. You cannot escape indirect responsibility if middle-class youths of education and proper equipment are driven to the ranks of the terrorists. It is time you mend your ways. It is time you abolish this unholy caste. Before you can expect us to listen to your fears of impending discrimination against you, remove the present discrimination you observe against Indians." We have stated in blunt language what Lord Willingdon has urged in a characteristically delicate but forceful style. We trust that his hearers would, by their conduct in the time to come, demonstrate that they have benefitted from His Excellency's sage advice.

* * *

In the course of the short and frank speech which, as President, the Hon. Mr. J. S. Henderson delivered, he expressed the hope that "the discussions will be helpful in clearing away our difficulties." The main difficulty in the way of business in India is suspicion, misunderstanding and distrust as between Britishers and Indians. Lord Willingdon has given a correct and effective solvent of the difficulty. Will Mr. Henderson see to it that his colleagues accept the Viceroy's suggestion as being most "helpful in clearing our difficulties"? In the main, Mr. Henderson confined himself to three topics—the Rerserve Bank Bill, Indo-Japanese Treaty, and the understanding reached between the Lancashire Delegation and the Bombay Millowners' Association. His remarks were pithy and to the point and everyone will concur in the tributes he paid to Sir George Schuster, Sir Joseph Bhore and Sir Frank Noyce, as "mature, considerate and wise occupants of the high offices they hold."

COTTON YARN AND TARIFF REVISION

In the hope of returning to this subject and to dwell on it at some length, we we were content merely to point out in the course of our comments last week on the Indo-Japanese Trade Agreement that it is seriously vitiated by the complete neglect of the needs of the cotton spinning industry in India. It would be labouring the obvious to try to prove the importance of cotton spinning. No one, we are sure, contemplates the prospect of a vast and secure cotton weaving industry in India, securing its requirements of yarn from abroad. So far as the cotton industry is concerned, for many decades Government and people have alike shown themselves ready to make the largest sacrifices in order that India might become self-sufficient in regard to her clothing requirements. With large area under cotton, with the nation as a whole committed to the expansion of the cotton mill industry, it is unthinkable that in any scheme of economic reform or reconstruction, either the public or the Government could afford to neglect the condition and prospects of the intermediary spinning industry. A large section of the textile industry is not probably, obliged to regard spinning as having special needs of its own. For mills, which are confined only to weaving yarns procured either from abroad or from indigenous spinners, are comparatively very few; and it is for this reason that the public hears so little of cotton spinning, when not a day passes without some clamour or other on the part of manufacturers of piecegoods.

* * *

It should not be difficult to see, however, that the prosperity of the cotton mill industry in India must rest inevitably on a sound and healthy spinning industry. If the country as a whole should remain exposed to the danger of cheap foreign yarn being dumped by foreign competitors, the prosperity of the innumerable Indian mills who own looms and spindles alike would be undermined. And even if we consider spinning interests by themselves it is not exaggeration to say that the total investments in purely spinning concerns in India amount to somewhere between 10 and 15 crores. The country has assuredly, no such surfeit of capital or organising capacity that it could afford to look with equanimity on the prospect of such large business units being ruined by unfair competition from abroad.

* * *

The average man, who, after all, must make public opinion, must recognise *prima facie* the absurdity of the cotton spinning industry finding no place whatsoever either in the Indo-Japanese trade agreement or the Amendment to the Tariff Bill introduced lately into the Assembly by Sir Joseph Bhore. It is not as if cotton spinning, unlike cotton weaving, has been having smooth sailing these days. The industry has in recent years met with the most tragic reverses. It is being assailed on all sides and is losing ground. In the past Indian yarn had acquired a firm foothold in the markets of the Far East ; and now it is being steadily ousted therefrom, not only by the mills that have grown up in the areas of our former customers but also by the competition of Japan. Within three years 1930-31 to 1932-33 the exports of Indian yarn have fallen from about 23½ million lbs. to a little more than 15 million lbs. This alarming shrinkage of our exports has naturally left the industry with a large unsaleable surplus. As in most other instances of modern industry, the expansion in this sphere has taken place largely on the assumption that India would be able not only to retain, but even expand, the foreign markets for her yarn. What happened, as a matter of fact, was that not only were foreign markets lost, but the Indian producer was exposed to most formidable attacks within the country.

* * *

In this attack the depreciation of the yen has been of incalculable help to the Japanese. To this factor alone is attributable the heavy influx of yarn in 1932-33, when the imports from Japan recorded a sharp rise from 6 million lbs. in the preceding year to 18 million lbs. Though the amount of the total imports of Japanese yarn bore a small proportion to the output of the Idian mills, the competition, which these imports offered to the local production, was very keen, in asmuch as both were largely confined to the lower and medium counts. The continuance of this state of keen competition has meant that the spinning industry in India is in to-day a most parlous condition.

* * *

It is impossible in these circumstances to exaggerate the imperative need for protection to the manufacture of yarn in India. Indeed, the claim to protecction rests on even more permanent grounds than the depreciation of yen alone. The various kinds of duties, which the spinning concerns have to pay on their purchase of imported raw cotton machinery and stores impose on them a positive handicap *vis a vis* the manufacturers in the United Kingdom or Japan ; and this by itself warrants the review of the position and the grant of effective protection to the indigenous industry against the competition of imported yarn. The claim was pressed with due emphasis by the interests concerned before the Tariff Board investigation into the question of the fiscal protection to the Indian cotton textile industry last year. The enhancement of duty on imported yarn from 5 to 6¼ per cent. *ad valorem* with a simultaneous increase in the specific duty from 1½ to 1⅞ anna per lb. in September, 1931 has long proved itself ineffective to prevent the inroads of Japanese yarn ; and the latest c.i.f. price of the latter shows that only an adequate increase in the specific duty can give the necessary protection to the manufacture of yarns in India.

* * *

In such circumstances, it is amazing that the Government of India should have taken little heed of the representations which doubtless, must have been made by the cotton spinning interests for giving them their fair places in the agreement between India and Japan. We understand that a large group of spinning mills in South India took the initiative in this matter ; and all that the Government of India had to say in reply was that the matter would receive their due attention when the recommendations of the Tariff Board in respect of the cotton textile industry are taken up. The Government of India have accorded such treatment to the Tariff Board report, that the cotton spinning mill industry is justified in thinking that the Government of India's reply is only a euphemistic way of turning down its application for considerate treatment. The dangers of neglecting cotton spinning are too obvious to need elaboration. And we hope that our discussion of this question will prove the starting point of a live and fruitful agitation for securing for Indian yarn the protection to which it is undoubtedly entitled.

INDIAN STEEL VERSUS BRITISH STEEL

The National Federation of Iron and Steel Manufacturers of Great Britain and the British Sheet Makers' Conference, in their representations submitted to the Tariff Board, have formulated the view that in the interest of the Indian Steel industry, and the consumers of steel in India, the Indian steel market should be reserved entirely to British iron and steel products and those of the Indian steel industry. Their proposal, as summarised by the President of the Tariff Board in the course of the oral examination of their representatives, is as follows :—

(1) First, that the Tatas and any other steel producer who may come into existence hereafter will have the first claim on the Indian market to the extent of the whole of their output.

(2) Secondly, the balance including both tested and untested steel will be supplied from the U.K.

(3) Thirdly, the prices will be fixed for Indian products and imported products based on the fair selling price fixed for the Indian steel industry.

(4) Fourthly, there should be provision for differential duties and offsetting duties adequate to maintain the prices at the agreed level.

(5) Fifthly, the agreement will be on a purely temporary basis that a proportion of the market would be supplied by imports reduced, from time to time, as the Indian production increases.

In addition to the foregoing, it is further suggested that, firstly, there should be a uniform minimum national price for India as a whole ; and, secondly, the Indian industry's output of steel should be apportioned to different classes of products (tested and untested) in a certain order of priority.

* * *

In effect, what the British steel makers demand is a virtual monopoly or prescriptive right to supply the entire Indian requirements of steel in excess of output of the Indian steel industry. As the normal average consumption of steel manufactures in India is in the neighbourhood of a million and a half tons per annum and the maximum output of the Indian steel industry is about 600,000 tons per annum, it means that a potential market to the extent of 900,000 tons per annum, is to be handed over to the British manufacturers. It may be mentioned, however, that whereas, before the War, the United Kingdom's share of the Indian imports of iron and steel was 60 per cent., it has now dwindled down to about 40 per cent. Belgium's share, on the other hand, is now practically double of the pre-war share, being about 34 per cent. Germany's present share is only about ⅓rd of the pre-war while France has increased her share from a fraction of 1 per cent. in 1913-14 to about 5 per cent. Similarly, other countries (Luxemburg, Czecko-Slovakia, the Saar, Norway, Sweden, etc.) have increased their share from a pre-war ratio of a little over 1 per cent. to over 8 per cent. now. The volume of imports, ofcourse, has gone down enormously since 1929-30 when the present trade depression set in. The Indian Tariff Board in 1924 while attempting to forecast the volume of British steel likely to be imported into India in the future years had, indeed, observed (vide Report regarding Increase of the Duties on Steel) as follows:—

> "But whatever the precise quantities may be, the British imports must rapidly decline. The increase in the Jamshedpur production must be largely at the expense of British steel, and the wide difference between British and Continental prices threatens a great acceleration of the process."

That such an arrangement as that which the British steel producers have made, if accepted by India, will greatly benefit them goes without saying. India has been the mainstay of Great Britain's foreign trade in iron and steel in spite of the great reduction in her share of this country's imports of iron and steel which has taken place since the War. Very little imagination is needed to appreciate the economic value and significance of an arrangement which enables her not only to recapture the lost market but to monopolise it to the exclusion of every other competitor. But how will it benefit India? Will it serve the threefold purposes of the scheme of protection to the Indian steel industry, which, in the words of the Tariff Board, are "the necessity of securing adequate protection to the Indian steel industry, the equitable distribution of the burden over the different classes of steel consumers, and the economic welfare of the country generally"? It is from these points of view that the British Steel Makers' proposals require to be examined closely.

* * *

In the first place, this suggested monopoly to British steel in India can only be effected by allowing it to enter the country either free or on payment of nominal duties. At the same time, it will be necessary to levy prohibitive duties on Continental steel. The Tariff Board in 1924, while examining the possibility of levying differential duties on steel imported into India according to the country of origin, came to this conclusion: "Tthe bulk of the Continental steel which entres India comes from Germany and Belgium, but France is already a formidable competitor, and is likely to grow in importance as a steel exporting country. It would serve no purpose to raise the price of Belgian and German steel in India if the result was the extensive substitution of French steel at a much lower price. The French Commercial Convention of 1903 is, we think, an absolute bar to any scheme which proposes to discriminate against steel imported from particular countries".

This is but one aspect of the question. Even if it were possible to overcome this difficulty and all non British steel excluded from India, the admission of British steel either free of duty or on payment of nominal duty must involve a very serious fall in customs revenue derived by the Government of India on steel imports. This loss of revenue will have to be made good by increase in taxation in other directions. The burden on the country which high preference to British steel must impose is self-evident.

* * *

Secondly, the proposal of the British steel producers must involve the stipulation that all British steel products coming to India must be of true British origin and not rolled from semi-finished products (such as ingots, blooms, billets, slabs, sheet bars, wire rods) imported into Britain from the Continent. It is a peculiar characteristic of the British steel industry that a very considerable tonnage of steel is imported into the United Kingdom from the Continent of Europe, the bluk of which consists of semi-finished products. Thus, the quantities of continental iron and steel products imported into the United Kingdom in 1913, 1925, 1927, and 1928 were 2,230,955, 2,719,779, 4,406,089 and 2,895,927 tons respectively. Of these, ingots, billets, blooms, slabs, sheet bars, tinbars, and wire-rods accounted for 999,891, 1,325,552, 1,944,395 and 1,347,856 tons respectively. A further analysis of these imports according to the countries of origin discloses the outstanding fact that about 54 per cent. of these imports in 1928 came from Belgium, the very country whose steel the British steel producers would like to see excluded from India. The outstanding fact that Britain imports such large tonnages of "semis" for conversion to advanced finished products such as sheets (plain and galvanised), bars, structural, tinplates and so on is, however, of great significance in connection with the high preference for British steel which the British producers are seeking to incorporate within the frame work of India's scheme of protection to her steel industry. It is these finished steel products rolled from relatively cheap Continental semi-finished steel that enable Britain to maintain her important foreign trade in iron and steel manufactures exported to all over the world.

* * *

It is evident that it is more economical for Britain to import these semi-finished steel materials from

the Continent than to produce them at home. There can be no other explanation. If Continental steel is entirely excluded from India by prohibitive duties, it is more than probable that one effect of it would be a substantial reduction in the price of semi-finished steel imported into the United Kingdom which will merely serve to swell the profits of the Brtish producers of steel.

* * *

The British steel makers will no doubt be prepared to give the assurance that British steel imported into India would be of British origion. But the trustworthiness of such an assurance, if given, will always remain highly questionable. Nor will it be possible for the Indian High Commissioner to certify the country of origin of nearly 900,000 tons of steel covering an infinite number of classes, sections and varieties, produced in numerous steel Works of the United Kingdom. Apart from the magnitude of the task involved in tracing the origin of finished steel produced in these factories, the cost of such certification, even if it were physically possible to do so would be clearly prohibitive.

* * *

It will probably, be argued that the imposition of recent traiff on steel by Britain will result in substitution of steel of entirely British origin in the place of imported steel, in the steel industry of Great Britain. That is possible but such substitution must inevitably raise the cost of production of British iron and steel products. Evidence is not lacking that this has already taken place to some extent. Both the British Sheet Makers and the National Federation of Iron and Steel Manufacturers of Great Britain have pleaded before the Tariff Board that the landed cost in India of British steel products is much higher than the figures which the Indian steel industry has supplied to the Board. In the case of galvanized sheets, this increase was said to be as much as 15 shillings per ton higher than the figure which the Indian Delegation to the Ottawa Conference reported in 1932.

We come, therefore, to the peculiar position that as the competitive powers of British steel products in the foreign markets including India are weakened through increased cost of production consequent on the levy of protective duties on steel by Great Britain herself, India is asked to lend support to the British fiscal policy of protection by admitting British steel products into this country free of duty or on payment of only nominal duties.

* * *

We may now consider what effect the British Steel producers' proposals are likely to have on the future development and expansion of the Indian steel industry. Time and again, the Tariff Board, the Government and the Legislature have emphasized the point that the scheme of protection must serve the dual purpose of the preservation of the existing steel concern as well as enlistment of fresh capital to the industry so that India should be independent of foreign supply in regard to the whole of her requirements of most kinds of steel within a reasonable period of time. To Great Britain, on the other hand, export of her iron and steel manufactures is a vital economic necessity. One has only to bear in mind the prominent place which iron and steel products occupy in Britain's export trade in manufactured goods in exchange for which she obtains the necessary food stuffs for her people and raw materials for her industries, to appreciate the great importance to her of any scheme or arrangement which ensures to her a virtual monopoly over the bulk of the Indian demand for steel. Is it conceivable that such a monopoly granted to a powerful combination of foreign steel producers whose total capital investment is in the neighbourhood of £250,000,000 will be conducive to the flow of fresh capital to the Indian steel industry for its further expansion and development? Political corruption, intrigue and unhealthy practices which have inevitably followed the formation of Trusts and Combines in other countries would follow as these alone can keep this monopoly intact. The hope of India to become self-sufficient in the matter of her requirements of steel will be postponed to Doomsday.

With the mighty gods foregathered in Calcutta, part of the functions discharged by "Hill-bird", who furnishes us information about the doings and goings-on in Olympus, has to be taken on by "Eavesdropper" for the first fortnight of the New Year. In the normal course, new appointments to the Viceroy's Executive Council and events of this nature would be covered by him and commented on in the racy and knowing way which readers of *Indian Finance* have come to associate with "Hill-bird". Our Delhi correspondent is a hundred percent news-man. His job has been to hunt up news even if it be hid in the fastnesses of the sweet but taciturn bosom of the Japanese Ambassador. I wish, therefore, that the announcement regarding the successor of Sir George Schuster had been made at a time when it would have been Hill-bird's job to nose about and find out all that has to be known. As it is, in the circles where I move, there is much of *bazar gup* to gather for one who peers through crevices and eaves through keyholes. But it is not considered correct form if I show undue curiosity in regard to affairs that it were best to leave to discreet silence. While *the* Eavesdropper has attained some measure of popularity with the avid readers of this section, *an* eavesdropper does not exactly enjoy a high status in society. Through all times, there has been an odium and a stigma as regards an eavesdropper. The derivation of this word justifies its unhappy associations. The name "eavesdropper" is derived from the punishment which, according to Oliver, was directed in the Lectures, at the revival of Masonry in 1717, to be inflicted on a detected Cowan and which was

> "to be placed under the eaves of the house in rainy weather, till the water runs in at his shoulders and out at his heels".

* * *

It is, therefore, with some reluctance and much diffidence that I take up the reporting of the news side of the new appointment. Sir B. L. Mitter and Sir George Schuster are both due to retire within a few days of each other after the Spring session of the Assembly. Their retirement was to have taken place earlier; but an extension was given, the announcement of which was made in the same *communique* in regard to both the members. A Government Notification was issued three weeks ago to the effect that Sir Nripen Sircar was to be the successor of Sir B. L. Mitter. That there was no simultaneous announcement as regards a new Finance Member was construed as an indication that Sir George Schuster would be given an extension of one year, so as to facilitate the inauguration of the Reserve Bank being carried out by one who successfully piloted the Reserve Bank Mill. Moreover, it was thought that the first appointment for the various boards and chief offices could be made more suitably by one who has been in India and knows India and Indians for over five years. Expectations were widely prevalent that Sir George was sure to be pressed on to stay till the summer of 1935. From this point of view, the announcement of this week is in the nature of a disappointment and a surprise.

The public may feel that from another point of view also, this is both a disappointment and a surprise. Sir Alan Parsons was, in the view of men in the know and of most who know him, a red-hot favourite as a certain winner of the Finance Membership. It was even felt that such delay as there was in the selection of the incumbent was due to a fight between the India Office and the Indian Civil Service. The claims of City experience and of knowledge of British Treasury administration were strongly urged by the Secretary of State. The Indian Civil Service had strong views that as between the British Treasury *cum* city experience and Indian Treasury experience, a kind of rotation should take place. To all outward appearances the India Office has won. I am not so sure, however, that Sir Alan is either disappointed or surprised that he was not selected. He might have known that owing to the present composition of the Viceroy's Council, his appointment was more or less impossible in the existing conditions. If I am not mistaken, the law provides that not more than three Civilians may be members of the Executive Council. There are already three Civilians, namely, Sir Harry Haig, Sir Frank Noyce and Sir Joseph Bhore. A fourth Civilian in the person of Sir Alan Parsons was, therefore, out of the question.

* * *

But I have heard it said, in influential quarters, that when Sir Joseph Bhore retires in 1935, Sir Alan will succeed him as Commerce Member. Sir Alan's claims both to the finance and commerce portfolios stand on a strong footing. He has been connected with the Finance Department, directly or indirectly, for a decade and a half. Of all the loans issued in 1932 and 1933 in connection with the conversion operations, the one which *Indian Finance* could support without any reserve of any kind, was the loan planned and fashioned by Sir Alan during his temporary occupancy of the finance *gadi*. I have had opportunities of discussing my peculiar fads with him; and I have not the slightest hesitation in averring that he has a most correct understanding and a most sure instinct as regards giltedge, credit policy and credit operations. That he would have made a successful Minister of Finance is a proposition admitted on all hands.

Nor need there be any doubt that he will make an equally successful Minister of Commerce. The most important section of the Commerce Member's allotted task is the administration of Railways. Sir Alan has an intensive and extensive knowledge of railway problems, having been Financial Commissioner for Railways for five years. When I was last in Delhi, I had even heard suggestions that if Sir Alan were not appointed as the successor of Sir George Schuster, he might retire from service. But I do believe that the report that he is ear-marked for the Commerce Membership is reliable and such as to ensure the continuance of Sir Alan in service.

I am aware that there may be a practical difficulty of another kind. There are now three Indian members in the Council, Sir Joseph Bhore, Sir Fazl-i-Hussain and Sir B. L. Mitter. If Sir Joseph were replaced by Sir Alan, the number of Indians would be reduced to two. At the present stage of constitutional development when hopes are engendered of increasing Indianisation, reduction in the Indian *personnel* of the Viceroy's Council would be construed as a retrograde step. I cannot see how this difficulty can be got over. But with the increasing work devolving on the Commerce Member, it may well be that the work now done by Sir Joseph would be divided between two members. Company Act reform with particular reference to the control of banks and insurance companies, would need the fullest attention from the Commerce Member. If work in this regard is seriously taken on hand, it would be advisable to separate railways and create a member in charge of railways. Should such decision be taken, nothing can stand in the way of Sir Alan's preferment.

* * *

Meantime, I, for one, cannot see how a British Civilian, comparatively young in age, should be considered superior to an Indian Civilian, ripe in experience. Is it on the principle that a devil untried is better than a devil tried? Sir James Grigg has, undoubtedly, valuable experience. I understand that he was in Cambridge in the same period as our *enfant terrible*, Mr. Girija Bajpai. He is reputed to have had a brilliant career in college and while Mr. Bajpai chose the Indian Civil Service, his contemporary went in for the Home Civil Service. Other Indian Civil servants who were contemporaries of Sir James Grigg are Mr. Clow and Mr. J. B. Taylor. As Private Secretary for over ten years to the British Chancellor of the Exchequer, he has had ample opportunities of both the financial and political sides of British Treasury administration. At the same time, it should not be forgotten that he has had more to do with Inland Revenue than with currency and banking matters. In the present phase of Indian finance, the Finance Member would need more experience in currency than in budgetary matters. To understand the peculiar problems of Indian finance, it will take the new Finance Member two years of careful and detailed study. All circumstances taken into consideration, there was a strong case, in the present circumstances, for an extension of Sir George Schuster's term of office or, in the alternative, the elevation to the membership of an official fully versed in Indian monetary and currency problems.

* * *

The changed aspect of life and conditions in Calcutta is interestingly revealed in the change that has come over the kind of cold weather social functions. In the Calcutta that I first knew, the climax of the season was reached in the annual party that the Maharajadhiraj of Burdwan used to give in his Alipore residence, Bijay Manzil. For the quality and quantity of the gathering, for the neat and natty arrangements, for courteous attention and splendid and varied entertainment, Burdwan's afternoon parties were *non pareil*. The late Maharaja of Darbhanga had likewise his annual fixtures. These are now but memories of the past. The present-day social amenities are furnished not by the propertied or landlord class but by prominent Indian businessmen. The President of the Bengal National Chamber as well as the President of the Indian Chamber of Commerce have regularised an annual entertainment in honour of one or other of the members of the Viceroy's Executive Council. The President of the Bengal Industries Association has now popularised a third lively function. In the current week, Sir Frank Noyce was entertained by Mr. Amritlal Ojha at Pelitis. Mr. N. N. Rakshit gave an afternoon party in honour of Sir Joseph Bhore and there was light and colour as this was the only function in which there were fairies to grace the occasion. A brilliant and impressive luncheon party was given by Mr. Nalini Ranjan Sarker. During his one year Presidentship of the Federation of Indian Chambers of Commerce, Mr. Sarker has been quite lavish in entertaining. But amongst all his functions, this week's party at the new premises of the Bengal National Chamber was by far the biggest and most magnificent social event I have witnessed for many a long day.

* * *

Three members of the Viceroy's Executive Council were present; four members of the Cabinet of the Governor of Bengal; the Leader of the Opposition in the Assembly; the President of the Tariff Board; the retiring President of the local board of the Imperial Bank; the Presidents of the Indian Chamber of Commerce and Muslim Chamber; the President of the Associated Chambers of Commerce; and Private Secretary to the Viceroy; the Chairman of the Port Trust; the Vice-Chancellor of the Calcutta University; the Managing Director of the Tata Steel Works; the Editors of the *Statesman*, *Capital*, and, let me add, *Indian Finance* (and also of the *Whip*, whose slashes are expected to commence from January 22). It was an influential gathering of seventyfive friends and well-wishers of Mr. Sarker. The Chamber was aesthetically decorated by bouquets of flowers and bunches of green leaves. Incidentally, I may remark, I have rarely seen a more effective and a simpler decoration than the one for which the Calcutta Corporation has set an inspiring example. The guests had a most enjoyable time; and Indians and Europeans, high officials and leading businessmen, men engaged in public service of various kinds, politicians and journalists, here was an unique opportunity afforded to all of them to meet in most convivial surroundings and exchange ideas in most friendly atmosphere. Mr. Sarker must be intensely proud of the great success that attended his annual function. It has been growing more and more important and is looked upon as one of the permanent fixatures amongst the social functions of the city. This is a happy augury for the Bengal National Chamber housed in its new and comfortable habitation. During the four years or so when Mr. Sarker has been occupying the Presidential chair of this Chamber, this old institution has undergone an effective course of monkey gland treatment. Bravo! Bengal National Chamber. Bravo! Nalini.

GOVERNMENT OF HIS HIGHNESS

THE MAHARAJA OF MYSORE

4% CONVERSION LOAN 1953-1963 ISSUED PAR

Free of British Indian and Mysore Income Tax

Open from 15th December, 1933 to 15th March, 1934, inclusive subject to closure at any time without notice by Government

Subscriptions may be in Mysore Government 6¼% Loan 1940; 6½% Loan 1941-51 and 5½% Bonds 1938, Savings Bank Fixed Deposits as noted in the Notification.

A cash bonus based on the present value of the excess in interest of the current loans over 4% is payable at the following rates immediately:—

6¼% Loan 1940 ... **Rs. 13-5-0 per Rs. 100, face value.**
6½% „ 1941-51 ... **„ 16-8-0** **Ditto.**
5½% Bonds 1938 ... **„ 6-10-0** **Ditto.**

A special bonus of annas two per cent. will be allowed on applications for conversion of the above three loans received on or before the 25th January, 1934.

For terms of conversion of the various kinds of deposits please refer to the notification.

The holders may, if they so desire, tender the cash bonus and interest as subscription to the loan for further amounts in multiples of Rs. 100.

Brokerage will be allowed to recognised Brokers and Bankers at the rate of 3/32 per cent.

For further particulars, please refer to Mysore Government Notification No. Fl. 3147-55/G.F. 172-33, dated 11th December, 1933, or apply to the Comptroller, Mysore Government, Bangalore, or any interest paying Treasury in the State or any branch or head office of the Imperial Bank of India and of the Bank of Mysore, Ltd.

M. VENKATESA IYENGAR,
Comptroller.

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, January 10, 1934.

Throughout India Bombay is perhaps the only city with an exclusively trading and commercial population. Other centres there are, who lay claim to scarcely less industrial importance; but nowhere is the atmosphere that of a purely commercial city. This circumstance helps the appraisal of what may be called business sentiment in the new year. Bombay has, doubtless, many a trouble which is older than the depression and might, for aught we know survive it long after. The pre-eminence of its cotton mills has long since been undermined. From 1926, people have the Tariff Board report to swear by when they say that Bombay yields the palm alike in natural advantages for cotton manufacture and in efficiency of organisation. And despite all the vigorous propaganda, often successful of Bombay's magnates to secure the requisite advantages, Bombay's trade and industry are hardly yet out of the wood. The end of the old year was marked by the debacle of the Currimbhoys. The annual statement of the Bombay Millowners' Association bears doleful testimony to the trials of this city in the recent past. While other centres are recording increases in the number of mills Bombay had an actual decrease of three in the period under review. Of the 31 mills which were completely stopped during the whole of the year 14 were located in Bombay City and Island. And if it is remembered that the period does not extend to the time of the mishap of the Currimbhoys, the toll of the changed conditions on Bombay's premier industry might easily be imagined.

It might be more useful to examine the position in the light of the figures of spindles and looms, and consumption of cotton.

The total number of spindles in the equipped mills of the country now stands at 9,572,000, an increase of 65,000 during the year. The total number of looms is 189,040, an increase of 2,600 during the year. In Bombay City and Island, the number of spindles fell to 33 lakhs from 34½ lakhs, and the number of looms from 77,000 to 73,00. In Ahmedabad, the number of spindles increased by 150,000 to 1,978,000 and the number of looms increased from 42,500 to 47,200. In the United Provinces, the numbers of spindles and looms were respectively 664,000 and 8,906; both these figures are slightly higher than last year's figures. In the Madras Presidency, there was an increase of 43,000 spindles and 300 looms during the year, the total figures on 31st August, 1933, being 864,000 spindles and 5,550 looms. In the Central Provinces, there was no change in the number of looms, but a very slight increase in the number of spindles, the figures at the end of the year being Spindles 306,000 and looms 5,723. In Central India, the number of spindles increased by 12,000 to 314,00 and the number of looms by 135 to a total of 8,339. In Bengal the number of spindles, dropped by 35,000 to a total of 333,000, but the number of looms increased by 700 to a total of 5,976. In the Punjab, the number of spindles increased by 8,000 to a total of 1,57,546, and the number of looms increased by 150 to a total of 3,758. The changes in the number of spindles and looms in other centres of the industry were insignificant.

The total paid-up capital of the Industry on the 31st August, 1933, amounted to Rs. 39,67 lakhs, a drop of Rs. 66 lakhs compared with last year. In Bombay City and Island, the total paid-up capital of the completely equipped mills fell by 79 lakhs to the figure of Rs. 13,96 lakhs, but this loss was to some extent made up by the additional capital invested in new mills in other centres of the industry.

The activity of the Industry as compared with the previous year is reflected in the figures of cotton consumed. In the year ending 31st August 1933, the Industry consumed 1,419,000 candies of cotton as compared with 1,456,000 candies in the previous year. In Bombay City and Island, the drop in consumption was relatively more severe than in other parts of the country, 399,000 candies having been consumed in 1933 as compared with 460,000 candies in 1932. The average number of spindles working daily during the year was 8,202,000 out of a total of 9,572,000 erected. Last year, the corresponding figures were 8,323,000 working out of a total of 9,506,000 erected. Of the 189,000 looms erected, an average of 163,000 were working daily during the year. This compares with the figure of 161,000 working daily in the previous year. In Bombay City and Island, only 2,431,000 spindles and 59,000 looms out of 3,300,000 spindles and 73,000 looms were working regularly. It should, however, be noted that the above-quoted figures of spindle and loom activity do not include particulars of night shift working.

The number of operatives employed daily on day shift work was approximately 400,000 as against 403,000 in the previous year. Particulars of the numbers regularly employed on night shift work are not available.

I have allowed myself to be lured and to lure others into this doleful tale in numbers. What I set out to urge was that Bombay, judging by all outward appearances is far from disheartened. We have bid goodbye to the old year, and are shaking hands heartily with the New. There is of course no scientific contrivance by which to judge the sentiment in the depths of people's minds. No man feels alike throughout a day, not to take longer periods. But Bombay City has begun to wear a distinctly cheerful aspect. In fact, Bombay looks so spruce and neat these days, that a French visitor from Pondichery to the Science Congress has paid a fulsome tribute to the health authorities and placed it on a par with the best-run cities of the West.

To turn to more concrete facts. Is it altogether without significance that Bombay is now assured of a balanced budget, after all the wearisome wanderings through the dreary deficits on which the mighty Lord Lloyd set his feet years ago. Or again, is it without an augury that there has been the sale of an extensive frontage on the Back Bay Reclamation, that both in the city and in the suburbs the building trade is plying vigorously. Of course, the engineering indusry as such has much to gain before it can shout. The Government are yet to relax screw which they have kept tight on new construction, and all the talk of the meeting of the Standing Railway Finance Committee and the niggardly schemes on its agenda are nothing before the voracious appetite of an industry starved for years. All the same, it is not a small mercy that building is again on the upward trend.

Since December last much work has been accomplished by the builder in several localities. Several ancient structures have disappeared and the various

OLYMPUS

(From Our Correspondent)

New Delhi, Jan. 9.

Indo-Japanese Trade Agreement—Japanese Leader emphasises difficulties—Formula to be fitted to work-a-day World—Traiumph of Delhi and Ahmedabad—Lancashire worsted—Mr. Mody yet hopeful—Budget Troubles—Railways, the source of unsettlement—New capital programme—Scrutiny of shrewd Southerners—Emergence of a few sound schemes—Statutory Railway Authority—New Session of Assembly—Thrillers in Store.

* * *

The Indo-Japanese agreement has now been concluded. As a business deal it is fair to both the sides ; as a trade treaty it is more advantageous to Japan than to India ; as a diplomatic achievement it would redound to the credit of the first Indian Commerce Member.

* * *

Mr. Kurata, the Leader of the Cotton Delegation —man of few words but of grim determination—said to me "we are now going to face the Himalayan task of adjusting our trade to suit the mathematical formulas adopted in India. The quotas look perfect on paper ; but they mean such a disturbance of the normal channels of trade that it will require all the ingenuity of the co-operative faculties of our people to make it work advantageously to both the countries."

* * *

But the fact that this agreement has been concluded is a triumph for the Ahmedabad and the Delhi Millowners who made no secret of their view that, if sacrifice had to be made in the interests of the cotton growers of India, it was better to come to terms with Japan, than with Lancashire.

* * *

This was not the view of Mr. Mody and his associates of the Millowners Association of Bombay. They would have the Japanese "kicked out of India", strengthen the links forged into at Ottawa and divide the Indian Market with Lancashire.

* * *

However, the Lancashire interests assisted by Mr. Mody hope to do well when Sir Joseph Bhore brings forward his bill to give a fresh measure of protection to the textile industry. But this bill will leave Japan untouched so that protection to the Indian mill industry will have to be against Lancashire.. If Mr. Mody argues that Lancashire is not his competitor now, he will only weaken his own case. If he stands for adequate protection, he may be undoing his promises to Sir William Clare-Lees. Verily, the new cotton bill will put Mr. Mody on the horns of a dilemma.

* * *

I have been told by a friend of Sir George Schuster that, in fairness to the present Finance Member, it should be pointed out that he is dealing with a budget situation totally different from that of his predecessor. Sir Basil Blackett had nine crores of provincial contributions and five crores of profit from Railway earnings. And that, while it is true that the credit for wiping off the provincial contributions goes to Sir Basil Blackett, who balanced the budget, the utter collapse of the railway system, so far as profits for the general revenues is concerned, is a factor of great importance in calculating the present budgetary position. Not only Sir George Schuster has not had a penny for the past two years from the Railway undertakings but there is no prospect of this source becoming productive for another two years.

* * *

The Railway administration is certainly the chief cause of upsetting our budgetary calculations; but the fault really does not lie with the Railway Board. To the extent to which they could economise, they have economised ; and Mr. P. R. Rau and Mr. Sankara Aiyer are ever watchful on the expenditure side. They have consistently resisted the attempts of certain commercial interests to force India to invest large amounts in new capital programme for railway extension. They know that, while money can be raised cheap to-day, it is by no means sure that in future railways will be able to earn profits sufficient to pay even the low interest charge after providing for depreciation.

* * *

Every scheme for new lines, that has been brought up—and there are quite a number of them—has been subjected to merciless scrutiny. It may, therefore, be correct to say that, if during the course of the year Mr. Rau approaches the Assembly for new railway programme, it will be the result of an absolute conviction that the scheme he is sponsoring is worth the money that will be sunk in it.

* * *

Another reason why a note of cheerfulness is struck by the railway officials is that this year trade has been steadily on the increase and tht railway estimates of earnings, which have been prepared last year in the hope that some miracle would happen to make the wheel go round, have, in fact, been realised.

* * *

The next railway budget will not attempt any new experiment either in the reduction of rates and fares or in the field of startling programmes. The only interest in the budget speech of Sir Joseph Bhore may be his reference to the Statutory Railway Authority about the constitution of which a great deal of confusion still exists in the public mind.

* * *

The Budget Session of the Assembly may begin with a downpour of adjournment motions. There is already one pending for the purpose of discussing the Capitation Tribunal's Award. This will yield a full two hour debate and will be talked out. Mr. B. Das, the hero of the adjournment motion on the Secretary of State's evidence denying India the right of retaliation, has come forward with a proposal that, if the Indo-Japanese Treaty is not signed in India, it would reduce India to a "subordinate branch of British Administration" and "dishonour the Fiscal Autonomy Convention !"

* * *

And if our jolly old friend Sardar Sant Singh means to pursue the matter of unseating those Members, who heve been absent for more than two months consecutively, he may bring in another adjournment motion to censure the Government for failing to perform the functions laid on it by the Government of India Act. All said, the forthcoming session should have a few thrillers in store for us.

"HILLBIRD."

SOUTH INDIA

(From Our Correspondent)

Madras, January 10.

After the gaiety of the Christmas holidays, Madras may well have the feeling of the morning after the night before. The holidays have been a veritable carnival. Few, who have not of late visited the city during Christmas, can realise the extent to which Madras attempts to compress a year's gala into a week or a fortnight. What with two rival musical conferences, a host of dramatic troupes, amateur and professional, a park fair and the resultant concourse, sometimes of friends who hadn't met, literally, for ages, the thrill, sensation and strain of Christmas in Madras must be felt, to be appreciated. One might say that other provincial metropolis have nothing to compare with what Madras has by way of a feast to the intellect and the senses, such as, perhaps, even Athens in her best days could have only planned, not executed. The political conferences were a weak side-show, a foil to set off the live interest of animated men and women in all that was going on elsewhere. And after all this enjoyment, to get to work is something of an effort.

But the wheels of Government have moved regularly and have provided during this period of communal holiday making, matters of paramount interest for these coumns. It is significant that the New Year has opened with the Government making up their mind on two important measures of reform, one, the reorganisation of local administration and the other, the settlement of the vexed question of land revenue. To take them in the order of their importance, the meeting of the Finance Committee has proved to be the turning point in the protracted consideration of the questions connected with land revenue in Madras. Readers of these columns are too familiar with the merits of the case to require their recital even in brief in this context. Suffice it that the departments of the Government concerned have since the resolution of the Legislative Council deciding in effect to leave the question to Government, been working hard and have been in a position to confront the Finance Committee with definite proposals in this regard. And the progress of this question has been along these lines: draft proposals of the Government, the recommendations of the Finance Committee thereon and the publication of the ultimate decision of the Government through a press communique.

It is pertinent to recall that the concession granted in Fasli 1342 was the suspension of collection of two annas in the rupee of (*a*) the ryotwari land revenue demand and (*b*) the quit rent payable on the enfranchised village service inams in proprietary estates, in districts and portions of districts where the resettlement rates have been introduced in or after the year 1918-19, *i.e.*, the whole of the following districts:—

Vizagapatam, East Godavari, West Godavari, Kistna, Bellary, Anantapur, Trichinopoly, Tanjore, South Arcot and Madura, the Tiruvannamalai and Chengam Taluks of North Arcot, the portions of Malabar in which resettlement has been introduced or was being introduced in Fasli 1342 and the Gudalur Taluk of the Nilgiris.

On December 15th, the Government, after considering the conditions of crops and the economic situation in the current fasli, have directed that the revenue of fasli 1342, suspended should be remitted altogether which concession works out at Rs. 33.38 lakhs.

THE GOVERNMENT PROPOSAL

The Government now propose to repeat the suspension granted in fasli 1342 in the areas mentioned above and also to grant in the same areas the following additional concessions, namely, suspension till next fasli of two annas in the rupee of all water-cess and charges for water taken for irrigation in both ryotwari and proprietary areas.

In the remaining areas of the presidency, the suspension will be till the next fasli of one anna in the rupee of (*i*) land revenue assessment of ryotwari land registered as 'wet': (*ii*) the quit rent payable on enfranchised village service inams in proprietary States; (*iii*) all water cess and charges for water taken for irrigation in both ryotwari and proprietary estates.

THE AMOUNT INVOLVED

These concessions are estimated to amount on the whole to Rs. 52.43 lakhs. The detailed figures are: In the areas referred to above at 12½ per cent. (Rs. 42.88 lakhs). Wet assessment ryotwari 24.16 lakhs; dry assessment ryotwari 12.77 lakhs; proprietary estates village service quit rent .50 lakhs; water-rate ryotwari 2.71 lakhs and water-rate zamindari 2.74 lakhs.

In other areas of the presidency at 6¼ per cent. (Rs. 9.55 lakhs); wet assessment ryotwari 8.52 lakhs; proprietary estates, village service quit rent .12 lakhs; water-rate ryotwari .77 lakhs and water-rate zamindari .14 lakhs.

It was explained to the Finance Committee that if these concessions became a permanent feature, the province would be involved in a total loss of revenue amounting to Rs. 56.13 lakhs from 1935-36. Little could be expected from the resettlement of newly claimed areas under the Cauvery-Mettur Project and hydro-electric schemes. For it would be quite impossible to forecast revenue with any degree of accuracy even for a few years ahead, while on the other hand, a progressive increase in expenditure of about 10 lakhs is bound to occur on account of increments, growth in pensions and other causes. Savings which might occur from revised scales of pay and restriction of leave privileges would take a much longer period to fructify. The Government therefore point out that "the inevitable result," will be the disappearance of the accumulated revenue balance which, at the end of 34-35, is expected to stand at Rs. 223.68 lakhs, without allowing for Part II schemes. Out of this amount, a sum of Rs. 125 lakhs at least should always be retained as the Government have found it desirable to retain in such a minimum balance permanently. The excess over this is only Rs. 98.68 lakhs. If the demand of Rs. 51.93 lakhs for Part II schemes for 1934-35 in the revenue account and Rs. 23.94 lakhs to be met from balances be admitted in full, this amount will be reduced to Rs. 22.81 lakhs; and if this scale of expenditure is repeated in the succeeding year, the available balancs will completely disappear. It is consequently impossible to allow in full for the Part II schemes proposed by the various departments; nor will it be possible to continue in full the grants for teaching and for buildings and equipment of educational and medical institutions, nor the grants for communications including trunk roads and village roads, and for rural water-supply which it has been customary in the past to provide in Part II and which it is most undesirable to curtail.

As for Part II schemes for 1934-35 to be met from current revenues (to consider which the Finance Committee will meet next week) the Government's view is that the maximum amount that may be allowed is Rs. 20 lakhs against an anticipated surplus of Rs. 23.02 lakhs. The Government are further of opinion that schemes involving recurring expenditure should be reduced to the minimum.

The Finance Committee has proved itself capable of being responsive to public opinion in the districts and being able to meet the Government spokesmen on their own ground. It is to the credit of the Committee that they have not allowed themselves to be scared away by the thought of losing the revenue balances accumulated in the past and have been able to suggest that the Government ought to find the means of reducing the impact of this revenue remission the expenditure on measures of public benefit. From all reports, the discussions in the Finance Committee have been conducted with ability and care; and it is believed that the Finance Committee were able to secure the approval and acquiescence of the members of the Government in proposals which they had ultimately to put forward. The recommendations of the Finance Committee are understood to be as below :—

	per cent.
In the districts recently resettled	
Wet assessment (ryotwari) suspension by ...	18¾
Dry assessment (ryotwari) (except in garden lands of Malabar and South Canara where it should be 12½ per cent.)	12½
Water rate (ryotwari)	12½
Water rate (Zamindary)	12½
In other areas of the Presidency.	
Wet assessment (ryotwari)	9⅜
Dry assessment (ryotwari) (except in garden lands where it should be 9⅜)	9⅜
Water rate (Zamindary)	9⅜

The Cabinet meeting for discussing the question of the amount of relief to be afforded to the ryot was held on January 6th and on the following Monday a press *communique* was issued embodying the decisions. The press *communique* contains a refutation of the more extreme claims made on behalf of the ryots. And the Government have also taken care to point out that the cost of the present concession is 60 lakhs, in addition to the Rs. 35 lakhs already foregone by way of previous remission. The loss of all this revenue, it is pointed out, "will mean that many improvements contemplated for the benefit particularly of the rural population will have to be given up or postponed and it is impossible to abandon or postpone for long such work as affect agricultural works without the ryot feeling the effects." The concessions as finally determined on vary between 2 to 1½ and 1 anna in the rupee according as the lands were resettled since 1918 or not and wet or dry lands resettled since 1918 qualified for the highest figure. The Order states that the concessions do not affect relief in flood afflicted areas which is additional.

One important recommendation of the Finance Committee which is generally believed to have met with the approval of Government but to which there is no reference in the *communique*, is that Government must reimpose the cut in salaries, to the full extent of 10 per cent. Doubtless, wider issues than the purely economic or financial, are involved in this question of the restoration of the cut in salary cuts. It is widely believed that even amongst the compact body of the Indian services there is a feeling of widespread jealousy at the comparative good fortune that befell the services in the Southern Presidency, and that the general opinion amongst them would be to welcome the obliteration of this invidious distinction. Reports have been received from time to time that the Government of India have also felt embarrassed by the haste with which the Government of Madras have reduced the salary cuts from 10 to 5 per cent. In contrast with the optimism that ruled in Delhi and Simla some time ago, it is now certain that Sir George Schuster with the best will in the world and the greatest pressure from the Secretary of State would not be able to restore the cut in salaries. In such a position it would not be quite unwelcome for either the Government of India or the services in other provinces if the Government of Madras, for reason of its remission of land revenue, were obliged to put its employees on a par with the other services in India. The circumstance that this question finds no mention in the press *communique* might be explained away as part of ordinary prudence of Government. It is to be hoped that in the interests of the public and in the interests of fair play as between the services themselves the Government of Madras will ultimately decide to do away with the reduction in the salary cuts and thereby minimise the effect of land revenue remission on expenditure on nation-building services. It is certain that Part II schemes will have to bear the brunt of the burden created by the remission of land revenue. But it is easier to put up with this, if we have the knowledge that the services are also to have their share of the common suffering resulting from the fall in agricultural prices.

The other important decision of the Madras Government is in respect of the abolition of the Taluk Boards and the transference of their functions to the District Boards together with incidental changes in local administration. Though, doubtless, the reorganisation of local government in Madras may recommend itself on more than one ground, it is the financial position of these local bodies that has appealed to the Government and has, so to say, forced their hands. Administrative considerations have also weighed, but they have not by any means been the determining factor. As the communique on this subject shows, the financial position of most of the district and Taluk Boards in the Presidency has been adversely affected as a result of legislation passed during the last three years and if the present position were left unchanged the trend of affairs would be more and more to plunge some of the local bodies into bankruptcy. The financial dispensation in this sphere has been such that in spite of retrenchment in general and engineering establishments and drastic curtailment of expenditure on roads and capital works, District Boards have as a rule failed to balance their budgets. 12 out of 25 district boards will work on a deficit after providing for a minimum of expenditure of services. As regards Taluk Boards the majority of them are not self-supporting. Of the 208 Boards 90 have recurring deficits and 39 more are on the borderland. Taluk Boards have no elastic sources of revenue. The deficits will accumulate from year to year and as their revenue is liable to be cut into with the appearance of every new panchayat the deficits will accumulate. Already a number of taluk boards are unable to pay the salaries of their staffs. The position has thus become unsatisfactory beyond endurance and drastic remedies are imperatively necessary if the system of local administration is to be saved from a complete breakdown.

The cause of this breakdown can be appreciated only if it is pointed out that the Madras Local Boards Amendment Act, 1930, introduced several changes affecting the constitution and finance of district and local boards. Before the amendment of the Act, an obligatory land-cess of one anna in the rupee on the annual rental value of lands was levied of which one-half was credited to the district boards and other half to the taluk boards. In addition, an optional cess of not more than three pies for district board purposes and a similar 3-pies cess for taluk board purposes could be levied if the board so desired. The Madras Local Boards Amendment Act, 1930, fixed a uniform compulsory rate of one anna six pies the proceeds being shared as follows :

(1) district boards—6 pies ;
(2) taluk board—6 pies ;
(3) Village Development Fund—3 pies ; and
(4) panchayats in panchayat areas, taluk boards in non-panchayat areas—3 pies.

As a result of this change, nineteen district boards which were levying an optional cess of 3 pies and one district board which was levying an optional cess of 1½ pies, have now lost this income. The district boards which were either not levying any optional cess or were levying at less than maximum rate have lost a potential source of income. The total immediate loss to district boards is about Rs. 11 lakhs and the ultimate loss is about Rs. 16 lakhs. Most of the taluk boards were levying an optional cess at varying rates. In lieu of this they are now credited with the proceeds of a 3-pies cess levied in non-panchayat areas. Although the total income of all taluk boards under this head has not decreased individual boards which were getting the full 3-pies optional cess have suffered a loss. Under the old

ECONOMIC REVIVAL THROUGH CURRENCY REFORM

II

SILVER OR PAPER—WHICH IS SAFER ?

BY SIR M. DE P. WEBB, C.I.E., C.B.E.

Sir Montagu Webb writes from Madras:—I am very glad to see that Mr. M. L. Doherty clearly recognises that the gold standard monetary system has broken down; also that he fully realises the endless absurdities, injustices, and miseries that the breakdown has already caused; not to mention the risk of widespread bankruptcy and general economic chaos that may develop, unless the situation be wisely handled.

Like many other observant, rational men, he feels keenly that something ought to be done by Government, and done quickly, if the position is to be retrieved. And he asks—"would not a (State) paper currency (unbacked by gold or silver) be a far more rational system?" Stability in purchasing power "could easily be maintained." Such a currency "could be made to respond to variations in demand, which is not possible under the gold standard." Each country would maintain its own national paper currency which would "form a natural protection for home trade and serve to check dumping," (by the State de-rating it against the paper currency of an inconvenient competitor, I presume).

Without attempting to go into details regarding the obvious risks, uncertainties, and dangers inseparable from a group of national paper currencies unsecured by anything other than the credit of the Governments who printed them, is it not very doubtful whether paper would be a suitable material for the money of all people? Among the relatively poor and illiterate hundreds of millions of the tropical and semi-tropical zones, entirely unversed in banking practices and living for the most part in villages separated far from each other and from big towns, in temperatures that make much clothing unnecessary, and perspiration particularly profuse, would not money-tools of silver (as at present) be far more appropriate than money of paper? Silver is beautiful. Silver is indestructible and everlasting. Silver serves as a thoroughly good store of wealth (one of the functions of money that Mr. Doherty does not mention). And perhaps, most important of all, silver money is already popular among at least one half of the people of the world. We must take the world as it is, not as we should like it to be. It is difficult in these circumstances to see why, because the gold monetary *standard*, through human frailty and incompetence, breaks down, (there is nothing whatever wrong with gold, *qua* gold), we should shut our eyes to facts, ignore silver, and attempt to set up a type of monetary standard *only suitable in societies of the most advanced kind where it is assumed that reason controls sentiment.*

But *does* reason control sentiment *anywhere*—even in Europe and America? The fact is that the majority of men and women are suspicious, distrustful, panicky beings. All experience shows that, even to this day, they like to have, easily available in case of emergency, a good supply of metallic money (a fact that those responsible for the management of India's new Reserve Bank, will have to keep daily in mind). Even now, in the advanced West, mankind continues to behave in exactly the same way as the peoples of the supposed backward East. Europe and the U.S.A. have now become the "sinks" of one of the precious metals,—an expression of lofty superiority (not unmixed with apprehension) that was formerly reserved by Western high-brows exclusively for India! In these circumstances, we should be wise to put our trust in silver, rather than paper, and to re-open our Mints to the public for the free coinage of good, silver rupees.

My reason for supplementing present supplies of gold with silver, rather than paper money is this:—A balance wheel of a watch when made of two metals, is less likely to vary than if made with only one metal. Two semi-intoxicated men strolling together arm-in-arm are less likely to fall down than one man in a similar condition, because variations in movements are neutralised. So, if the basis of the world's money consists of two metals—gold and silver—instead of only one metal—gold, the value of the combined mass is less likely to vary, in other words price-levels are more likely to approximate stability, than if money be based on gold only.

I urge re-opened silver mints free to the public with the express object of doing away with that "control," whether by the State, or by the banks or by any Group of Trust, which Mr. Doherty believes would be "easily" exercised in the case of a paper currency, but which I feel that no Government could be expected or trusted to manage to the satisfaction of all sections of the public.

And in the not far distant future, Governments may be even less amenable to the public's desires, than they are at present.

For these reasons, I submit that silver is safer than paper for the currencies of the tropics and of semi-tropical lands.

MONTHLY REVIEW OF TRADE AND FINANCE

NOVEMBER 1933.

The improvement that was noticeable in India's foreign trade in the second-half of the year has been fortunately kept up during the month under review. One might, of course, wish that the incipient revival had strengthened itself during the course of the last few months and greater expansion of the value and volume of India's exports were visible. But it is to be remembered that the conditions, which exert a restrictive force on trade, have continued, in the main, in tact. The expansion in the volume of our exports has not been attended, except in the case of a few articles like tea, by an increase in the prices of such commodities. The result is that in some of the staple exports, a marked increase in volume is still accompanied by a decrease in value. Moreover, it should be remembered that the decline in the imports into India has continued unimpeded and that every item shows an increased shrinkage in the volume and value of our imports. Though it is generally true that the maxim that you canont sell when you do not buy has no terrors for India as for Great Britain, for instance, there can be no doubt that expansion in the volume and value of exports should to a large extent, go hand in hand with the expansion of our import trade. In so far as the chances of the latter have been reduced by the definitely protectionist policy to which we have been committed in respect of staple trades like sugar, it would seem that for some time to come the pace of increase in India's exports must be limited. All the same, it is highly encouraging that exports during the month of November, 1933 amounted to as much as Rs. 12.84 crores as against 12.61 crores in October, 1933 and 12.11 crores in November, 1932. Our re-exports show a corresponding improvement from 27 lakhs to Rs. 30 lakhs and Rs. 35 lakhs during the three periods referred to above. Total exports thus amounted during the month under review to Rs. 13.19 crores against Rs. 12.91 crores in October, 1933 and Rs. 12.38 crores in the corresponding period of 1932. Imports of merchandise amounted to Rs. 10.01 crores against Rs. 12.62 crores in October, 1933 and Rs. 11.54 crores in November, 1932. The balance of trade in merchandise, therefore, amounted to Rs. 3,18 lakhs in November, 1933 against Rs. 2,29 lakhs in October, 1933 and Rs. 1,24 lakhs in November, 1932. The balance of transactions in treasure comes to Rs. 2,41 lakhs in favour of India, a somewhat marked decline in comparison with the favourable balance of Rs. 3,29 lakhs in October last and Rs. 6,59 lakhs in November, 1932.

*Weekly Average Returns.

As the decline in the import trade has been very inconsiderable compared to the fall in the favourable balance of transactions in Treasure, the total visible balance of trade for the month November, 1933 shows an improvement of but Rs. 1 lakh as compared with October, 1933 and a serious fall of Rs. 2,64 lakhs as compared with November, 1932. It is only when the longer period of the first eight months of the current financial year is taken that the fall in the balance of transactions is more than compensated by the increase in the favourable balance of payments in merchandise arising from the double phenomenon of increase in exports and decrease in imports. For the eight months, exports from India amounted to Rs. 98.74 crores against Rs. 86.34 crores in 1932 and Rs. 105.27 crores in 1931. The favourable balance of transactions in treasure at 33.55 crores was an improvement on the figures of 1931 but as compared with Rs. 40.58 crores in 1932 it shows a marked fall. But a decline of 15.93 crores in the total imports during this period has helped the total visible balance of trade to increase to Rs. 56.38 crores from Rs. 35.08 crores in 1932 and Rs. 35.84 crores in 1931.

As compared with November, 1932, the imports of food, drink and tobacco in November, 1933, decreased by Rs. 30 lakhs to Rs. 1,32 lakhs, imports of raw materials by Rs. 11 lakhs to Rs. 1,19 lakhs, and those of manufactured articles by Rs. 68 lakhs to Rs. 7,25 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) declined from 39,000 tons valued at Rs. 43 lakhs to 26,000 tons valued at Rs. 27 lakhs. Coal tar dyes recorded a rise of 957,000 lb. and Rs. 14

lakhs. Arrivals of raw tobacco fell from 416,000 lb. valued at Rs. 6 lakhs to 287,000 lb. valued at Rs. 4 lakhs. Imports of salt declined by 22,000 tons in quantity and by Rs. 3 lakhs in value. Under provisions and oilman's stores there was a decrease of Rs. 2 lakhs due chiefly to lesser imports of canned and bottled provisions. Imports of wheat amounted to 4,400 tons (Rs. 3 lakhs). Arrivals of tea declined and amounted to 823,000 lb. (Rs. 4 lakhs) as compared with 975,000 lb. (Rs. 6 lakhs). Under raw materials, the imports of kerosene oil declined by 1 million gallons in quantity and by Rs. 4 lakhs in value. Imports of mineral oils other than kerosene dropped by 1,552,000 gallons and Rs. 10 lakhs and stood at 9,225,000 gallons and Rs. 24 lakhs. Imports of cocoanut oil declined by 328,000 gallons in quantity and by Rs. 5 lakhs in value. Raw cotton (chiefly imported from Kenya Colony, Tanganyika Territory, Egypt and the United States of America) recorded an increase of 1,100 tons in quantity and of Rs. 9 lakhs in value. Imports of raw wool fell off by 326,000 lb. in quantity and by Rs. 2 lakhs in value or by more than half under both quantity and value. Under manufactured articles imports of cotton yarn and manufactures decreased by Rs. 73 lakhs. The imports of twist and yarn fell from 2,909,000 lb. to 2,876,000 lb. in quantity and from Rs. 25 lakhs to Rs. 23 lakhs in value. Under cotton piecegoods, imports of grey goods fell from 34 million yards valued at Rs. 45 lakhs to 10 million yards valued at Rs. 15 lakhs and those of white and coloured goods from 29 and 33 million yards valued at Rs. 46 lakhs and Rs. 59 lakhs to 18 and 15 million yards valued at Rs. 33 lakhs and Rs. 32 lakhs respectively. Under iron and steel there was an improvement of Rs. 14 lakhs due mainly to an increase under sheets and plates and tubes, pipes, etc. Imports of machinery and mill-work recorded an advance of Rs. 33 lakhs due mainly to larger arrivals of sugar machinery. The number of motor cars imported amounted to 1,230 and that of motor lorries, buses and vans to 611. The value of motor cars imported in November, 1933, amounted to Rs. 21 lakhs and that of motor lorries, buses and vans to Rs. 6 lakhs. There were noticeable decreases under fruits and vegetables (–Rs. 7 lakhs), piecegoods of cotton and artificial silk (–Rs. 12 lakhs), and woollen manufactures (–Rs. 12 lakhs) while silk, raw and waste, recorded an increase of Rs. 4 lakhs.

*Monthly average returns.

Compared with November, 1932, exports of food, drink and tobacco in November, 1933, rose by Rs. 50 lakhs to Rs. 3,89 lakhs. Shipments of rice, not in the husk, increased in quantity from 100,000 tons to 103,000 tons, but the value thereof declined from Rs. 77 lakhs to Rs. 67 lakhs. The exports of tea dropped from 53 million lb. to 48 million lb. in quantity but the value thereof rose from Rs. 2,22 lakhs to Rs. 2,79 lakhs. Shipments of tobacco unmanufactured rose from 1.5 million lb. valued at Rs. 4 lakhs to 1.8 million lb. valued at Rs. 5 lakhs. Exports of coffee advanced from 6,000 cwts. (Rs. 3 lakhs) to 13,000 cwts. (Rs. 7 lakhs). There was also an increase of Rs. 4⅓ lakhs under fruits and vegetable. Raw materials and producec exported increased by Rs. 46 lakhs to Rs. 5,38 lakhs. Under this group raw cotton recorded an increase of 500 tons in quantity, but the value fell from Rs. 1,31 lakhs to Rs. 1,10 lakhs. Of the total shipments of 22,200 tons, China took 6,400 tons, Italy 3,400 tons, the United Kingdom 2,800 tons, France 1,900 tons, Belgium 1,500 tons, the United States of America 1,400 tons, Germany 1,300 tons, Spain 900 tons, Japan 800 tons, the Netherlands and Greece 500 tons each, the remainder being despatched mainly to the French Indo-China and Poland. Consignments of raw jute increased from 65,000 tons to 112,000 tons in quantity and from Rs. 1,14 lakhs to Rs. 1,53 lakhs in value. Exports of lac improved by 35,000 cwts. to 78,000 cwts. in quantity and by Rs. 11 lakhs to Rs. 24 lakhs in value. Shipments of oilseeds improved from 76,000 tons valued at Rs. 1,21 lakhs to 106,000 tons valued at Rs. 1,25 lakhs. Groundnuts increased from 55,000 tons to 56,000 tons in quantity but fell from Rs. 92 lakhs to Rs. 67 lakhs in value. Linseed advanced considerably from 6,000 tons (Rs. 7 lakhs) to 35,000 tons (Rs. 40 lakhs). Castor seed, on the other hand, fell in quantity from 10,000 tons to 5,000 tons and in value from Rs. 13 lakhs to Rs. 5 lakhs. Shipments of raw wool advanced from 5.2 million lb. valued at Rs. 18 lakhs to 6.3 million lb. valued at Rs. 22 lakhs. Exports of raw skins rose by 100 tons in quantity and by Rs. 6¼ lakhs in value. Exports of manganese ore advanced from 10,000 tons to to 22,000 tons in quantity and from Rs. 2¾ lakhs to Rs. 4 1/5 lakhs in value, while raw hides recorded a decline of Rs. 2 lakhs. Manufactured goods declined by Rs. 18 lakhs to Rs. 3,44 lakhs. The yardage of gunny cloth exported shrank from 92 millions to 88 millions, but the value rose from Rs. 91 lakhs to Rs. 92 lakhs. The number of jute bags shipped advanced from 39 millions to 40 millions, but the value dwindled from Rs. 1,10 lakhs to Rs. 93 lakhs. Exports of tanned hides and skins rose by 600 tons in quantity and by Rs. 15 lakhs in value. A decline of Rs. 12 lakhs was recorded in the exports of drugs and medicines. There was an improvement of Rs. 3 lakhs in the exports of cotton, twist and yarn and of Rs. 2½ lakhs under wool, carpets and rugs while cotton piecegoods and paraffin wax recorded a decline of Rs. 4 lakhs each.

The share of the United Kingdom in the imports rose from 36 per cent. in November, 1932, to 43 per cent. in November, 1933, and in exports from 32 to 40 per cent. The shares of Germany, Japan and the United States in the month under report were 9, 11 and 6 per cent. respectively under imports, and 5, 2 and 9 per cent. under exports.

The tonnage of vessels entered into British India and cleared outward with cargoes from and to foreign countries and British Possessions during the month of November, 1933, amounted respectively to 592,000 and 662,000 as against 666,000 and 586,000 in October, 1933, and 621,000 and 644,000 a year ago. During the eight months ending November, 1933, the tonnage of vessels entered and cleared with cargoes amounted respectively to 4,747,000 and 5,045,000 as compared with 4,495,000 and 4,703,000 in the corresponding period of the preceding year.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

FOOD CONTROL & TRADE RELATIONS

The Commons debate on foreign policy on December 21st is interesting for the revelation that dissatisfaction at Sir John Simon's method of handling the problems is by no means confined to the Opposition Benches. Perhaps, there are many still in the Conservative rank and file who believe in the efficacy of Sir John's reluctance to incur commitments. But the hecklers during the debate were drawn as much from the usual supporters of the Government as from its avowed opponents. Sir John's statement on the eve of his departure for Capri was just what one might expect. It was a hollow defence of the attitude of caution which, whether it is attributable to the lawyer's training or to the mental make-up of a Liberal who has met with little difficulty in getting himself incorporated in the Conservative Party, must be condemned as singularly unhelpful to the solution or the present problems before Europe. Sir John has pleaded more than once that the statements of Herr Hitler and Signor Mussolini are not easily interpreted and that his efforts to interpret them with the aid of the British Ambassador in the respective capitals have not been of much avail. It is, indeed, unfortunate that the European political situation should be shaped so largely by two dictators of too impulsively forceful type. But all the same, Sir John cannot deny that the right way of regarding the question is not to attempt a clairvoyant peep into the minds of Signor Mussolini or Herr Hitler but to face the alternatives that are open to Britain and make a judicious choice therefrom. It was left to two Conservative Members of the House of Commons to point out categorically that "We must either face the policy of isolation and all that it meant or we must be prepared to enter into some system of collective security, a collective security which would give a real guarantee." Mr. Boothby urged "During the last few critical weeks we have been trying to have it both ways. We thought we could safeguard peace for ourselves by merely talking about it and without ourselves incurring any complications. The collective organisation of peace at this time could only be carried out by the League of Nations. The Government should not be deterred from pursuing a resolute foreign policy based on the League of Nations and on the Pact of Paris with sanctions to enforce it." The two quotations show that even Conservative members of Parliament realise clearly that for Britain it is a clear-cut question between preserving the collective system at the cost of commitments, which Britain would naturally like to avoid, and being shepherded into one or the other of the opposing European camps, with obvious consequences to European and world peace. This frightful prospect leaves Sir John Simon unmoved. He apparently believes in the sapience of his cautious prudence; and the best reply to it has been given by the *Manchester Guardian* which points out that "it is pardonable to be impatient when the Government is so cool, so cautious, so delicately treading on a question which is vital to an agreement."

Food Control

A curious situation has arisen out of the Government's dabbling in schemes of economic planning. The Conservatives' regard for the interests of British agriculture has involved the country in two different sets of difficulties. On the one hand, the quotas and the import tariffs have jeopardised Britain's export trade with agricultural countries who had formerly enjoyed a rich custom in Great Britain. On the other, the quota system has landed them in a system of food regulation which is having strange effects and incidentally carry with them the danger of prejudicing the popular mind against schemes of socialist control.

If the Conservative Government had deliberately set about turning the popular mind against socialism, which is accepted on all hands to be impending, it could not have devised a more ingenious way of accomplishing the end than the institution of amateurish schemes of food control. To dole out hard and unsavoury bacon, to flood the markets with costly beef, on the ostensible plea that they are all incidents of the Government's attempt to protect agriculture and indigenous producers of food stuffs is to create a revulsion for economic control, which the future Socialist Government will be hard put to it remove. The *Daily Herald* had therefore, been forced to point out in anticipation of possible criticism that Mr. Elliot and those in charge of such schemes are by no means Socialists, but only National Socialists intent on prejudicing in every possible way the changes of socialism in the future.

Unemployed—No Dole, but Insurance Relief

The exposition of unemployment statistics by Mr. J. A. Dale of the Ministry of Labour before the Royal Statistical Society is important for the corrections it has afforded to some of the popular misconceptions about the constitution of the unemployed and the significance and nature of unemployment relief. Mr. Winston Churchill was among the first to point out that the 1 million of unemployed, though constant in numerical capacity, was really of a changing personnel. It is not as if a large number of Britain's population continues for any considerable period in a state of unintermittent unemployment. Mr. Dale pointed out that unemployment is not a permanent state affecting 2 million workers, but an intermittent one which necessarily affects a much larger class than is indicated by the published figures. If the two million are of a changing personnel, it follows that this intermittent employment or unemployment affects a much larger class, say, 6 million or half the total of all insured workers. Mr. Dale said that there are 1 million who are in enforced idleness for 9 months in the year and 700,000 who have been employed for less than 30 weeks in the last two years. It follows from this that many of those in receipt of unemployment relief have at a not distant period in the past contributed to the unemployment funds, so that it is inaccurate to denounce the dole as having little or no insurance basis. The problem as regards the recipients of poor relief is different; and Mr. Dale's researches have not reached the point at which he could point out exactly what proportion of the recipients of poor relief should be added to the total unemployment figures. But it is certain that a large number of persons has lapsed from insurance benefit to poor relief in the trying years of 1931-32.

Trade Pacts

From all reports, the British Government are still actively engaged in the negotiation for trade treaties with the various countries. It is understood that the negotiations which have been in progress for some weeks in London between the British Government and the Estonian Delegation for the conclusion of a new trade agreement will be resumed during the early part of January. It is declared that throughout the discussion there has been a frank and complete exchange of views and so far there has been every reason to hope that no insuperable difficulties are likely to arise.

According to a *Reuter's* report, Stalin, the President of the U.S.S.R., has announced that a commercial treaty will be signed by Britain and Russia. This might well indicate that the Soviet

Air Mail Week.

Government is now inclined to be more accommodative on those questions which till now have proved to be obstacles to an early conclusion of the agreement. The British and Russian negotiators have been engaged in discussions for more than a month. And though it is five months since they were first started, having been renewed in July last after the removal of the British embargo imposed as a consequence of the Moscow arrests, there has as yet been no sign of a settlement. Stalin's statement induces a more hopeful attitude in this regard. The conversations with the French Government are expected to take place in London in February or early March. And the intention of the French Government to remove the surtax of 15 per cent. on British goods imported into France is another encouraging factor in the present situation.

The trade relations with Holland have, of late, come to enjoy much public attention. It is widely believed that as from the new year the Dutch Government would impose a new system of quotas under which a given country will be allowed a quota for a particular good amounting from 25 to 40 per cent. of the amount which she exported to Holland in a given past year. In the fixation of this quota no regard will be paid to the balance of trade between that country and Holland. It is the idea of the Dutch Government that any increase in the percentage allowed over the maximum of 40 per cent. will be made conditional on the grant of concessions to Holland by that country. The concessions demanded will probably be that each country, in return for a given increase in percentage in its quota, should agree to increase its percentage of total of export which it takes by a given amount. That is to say, if the total Dutch exports to a particular country is 20 per cent., in return for an increase of its quota for its own exports to Holland, it would be required to increase this by 10 per cent. to, say, 15 per cent. Though such a system would have its obvious advantages for a country like Great Britain, which has been having a large offtake of Dutch goods in the past, there has been a widespread demand that the relations between Holland and Great Britain should be a subject of more careful and more thorough enquiry on the part of the British Government. A writer in the *Financial News* recently contended that British manufacturers are apt to disregard the importance of making efforts to secure a larger portion of the Dutch market for themselves. And though most sections of the British industry have hotly disputed this allegation against themselves contending that they have done their best to maintain the commercial links with Holland, the correspondent of the *Financial News* has more than maintained his grouse by showing the large disparity in such important trades as boots and shoes and piecegoods between Germany's exports to Holland and Great Britain's. As he points out, there is a large difference between trying to secure the low share of Britain at present and exploring the means of expanding that share. It is probably in the back of the mind of the correspondent that the Government should attempt to see whether the expansion of agriculture at home is a sufficient compensation for the loss of trade with Holland that is threatened by the many protective measures that have been instituted in the recent past. Probably, in the present mood of the Dutch Government when the trade relations with each important country are being examined fully, the question of the relation of protection for agriculture with the outlets for British manufacture abroad will also come in for scrutiny.

The Exchequer returns for the week ended December 23 are important for an increase of £11,722,913 in the Exchequer's ordinary revenue during the period April 1 to December 23 compared with the corresponding period of 1932, a decrease in ordinary expenditure of £53,708,868, and a consequent decrease in the deficit by £65,431,681.

Ordinary revenue for the period totalled £407,111,430, compared with £395,388,517 ; ordinary expenditure totalled £501,196,217, against £554,905,085, and the deficit was thus £94,084,787, against £159,516,468.

Among the individual items of the revenue account, one of the most notable increases is that of £10,070,000 in Estate Duties, which, at £66,100,000, reflect the exceptional number of large estates, including those of Sir John Ellerman, the Earl of Cadogan, Mr. H. Trueman Mills and Mr. Robert Fleming, which have come under probate.

Another notable increase is that of £2,550,000, to a total of £19,680,000, in Stamp Duties, due at least in part, to increased activity on the Stock Exchange, following the improvement in industrial and financial conditions. Customs receipts, at £132,141,000, also show an increase of £6,709,000. Miscellaneous receipts totalled £19,228,150, against £13,169,448.

Excise receipts, however, at £82,600,000, show a decline of £11,030,000 following the reduction of 1d. per pint in the tax on beer. Income-tax at £62,911,000 shows a decline of £1,630,000, and surtax at £12,120,000 shows a decline of £2,610,000.

Money raised by Treasury bills shows an increase of £409,985,000 to £3,186,983,000 compared with £2,776,998,000. The increase has in part, been due to the finance requirements of the Exchange Equalisation Fund. But owing to the fall to record low levels of discount rates, the cost of Treasury bill finance has been much reduced.

A sharp contraction of £53,248,975 is reported in the interest and management of the National Debt. This item totalled £178,394,956, compared with £231,643,931. Slight further economies were also made in the supply services which totalled £316,043,576.

UNITED STATES OF AMERICA

BANK CODE & GOLD ORDER

The last week of the old year has seen the recrudescence of much of the monetary uncertainties of the earlier periods. There is, in the first place, the encouragement afforded to silver enthusiasts by the measures inaugurated by President Roosevelt for the purchase and coinage of newly mined silver in America at a price in excess of the market price. These silver enthusiasts had, of late, been talking freely of confronting Congress with duly drafted measures for the unlimited coinage of silver. Mr. Wheeler, for instance, has more than 27 Senatorial stalwarts ranged behind his bill for the coinage of silver at a ratio of 16 to 1. The possibility of drastic monetary changes is thus by no means precluded. Professor Warren, who is popularly credited with the authorship of the gold policy, defended it before the American Economic Association. On the assumption that the next few years would see wide changes in the world price of gold, Prof. Warren urged that to return to gold standard would be quite impossible unless means were found to control such changes. There is also Senator Connally, a member of the Finance Committee, who says that Congress would urge the Treasury to take over the gold stocks from the Reserve banks and assume the function of issuing notes directly. Though all the uncertainties pointed to by such a condition have not had their effects on the markets, rumours are rife about the impending devaluation of the dollar or the establishment of bimetallism or sensational changes in the personnel of the Treasury.

The fact that a series of meetings have been held at the end of last week and continued in

Air Mail Week

Washington between the Governors of the 12 Reserve districts and the Federal Reserve Board has lent much point to these reports, most of which have necessarily to be far wide of the mark. The fact that the R.F.C. has during these days left its gold price unchanged at the rate of 36.08 shows that there is, at present at any rate, no intention of making any serious change in the foreign policy of America's monetary administration. It is widely talked about that serious consideration is still being given to the establishment of a large equalisation fund as a result of the difficulties encountered in keeping down the external value of the dollar.

Bank Deposit Insurance Scheme

But according to the New York correspondent of the *Financial News*, the meetings of the Federal Reserve Board and the Governors were chiefly concerned with the bank deposit insurance scheme and with plans for the regulation of the stock markets of bank holding companies and of investment banks. There is more than one reason why the authorities concerned should take up the consideration and the inauguration of the bank deposit scheme. In the first place, adverse criticism has been on the increase ; and the denouncement of the scheme by the Guarantee Trust Co., which prefers a single banking system with limited branch banking facilities, has induced the authorities not to afford its critics any advantage by mere dilatoriness on their part. Secondly, the reserve situation is revealing difficulties which can be made up only by the facilities afforded by the deposit insurance scheme. Though the total reserves of the System show a surplus of 800 million dollars or more, there is a danger of deficiency in some institutions and districts ; and the authorities naturally believe that, if the scheme is put into operation without any further delay, the deposits of the Deposit Corporation would be available for redeposit in the weaker years. Thirdly, the time has come when the participating banks have to make payments to the corporation. Further delay would mean a continuance of the present practice of redepositing these payments in the banks of origin.

Preparation for Scheme

Every effort has been made to prepare the banks for the scheme. Out of a total of 1,446 national banks extant at the end of March last, 485 are still unlicensed ; but of these 354 with a total of 347 million dollars of frozen deposits have received approval for their reorganisation plans. Nearly all the 5,950 members of the Federal Reserve System have been accepted as members of the deposit insurance scheme. Out of a total of 8,300 non-member banks 7,749 have been accepted ; many of the remaining, it is understood, have not applied. The authorities have decided that there shall be no publication of the names of qualifying banks for the obvious reason that such publication would destroy completely the reputation of the banks who do not find a place in the lists.

The Bank Code

In addition to the bank deposit insurance scheme, a bank code has now been published, which makes provision for a number of new charges on all types of banks services in order that banking might be on a self-supporting basis in spite of the low rates of interest now prevailing. Deposit balances of less than 500 dollars are under the new rules to bear a compulsory service charge and an additional charge is to be made on each deposit or withdrawal beyond a small minimum number. General Johnson, it is understood, is firm against any excessive charges ; but he has endorsed the general principle underlying them. It is believed that as a result of the new code the use of small cheque accounts will be sharply curtailed and that as a consequence there would be a considerable expansion of currency in circulation. The general sentiment would seem to be that the code would serve to consolidate the very rapid improvement that has occurred in the position of American banks as a result of the relief afforded by the R.F.C. and which is reflected in the fact announced recently by Mr. Jones, Chairman of the R.F.C. that only 250 banks remain unqualified for the deposit insurance scheme. As a result of all this, banks' stocks are about the only cheerful group in Wall Street.

Regulation of Banking and Finance

Apart from the deposit insurance scheme, the conference of Governors is also examining a number of bold plans for the regulation of banking and finance which will be presented to Congress early in the session. The more important of the ideas embodied in such plans is the creation of a Federal body which will supervise the activities of the stock exchange and restricted marginal trading and bull operations and enforce full publicity in respect of such dealings. Bearing in mind the abuses revealed in connection with the collapse of banking in Detroit last spring, the Governors have, it is reported, considered a measure for empowering the new body to regulate bank holding companies and investing banks with a view to insist on the publication of their portfolios each quarter. Of a piece with these measures are the drastic changes in the listing requirements of the New York stock exchange which were announced by the authorities on December 27 with a view to prevent corporations from influencing the market values of their shares. The provisions include :

(1) All companies must, after January 31, make monthly statements of the amount of their own shares which they have purchased.

(2) After December 31 all companies must disclose all existing options on their own securities.

(3) After January 31 the Stock Exchange Committee will investigate the circumstances surrounding the issue of new securities to prevent concentrated holdings from being inequitably distributed.

The New Gold Order

The other important development of the week is the announcement of the new gold order of December 28th which seeks to strengthen the powers of the Treasury to impound gold. This is widely regarded as a first step towards the ultimate acquisition by the Government of the 3,700 million dollars of gold stocks held by the Federal Reserve Banks. It has been already mentioned that Senator Connally is of opinion that Congress would ultimately urge the Government to take possession of these gold stocks. Mr. Connally has now after an interview with the President confirmed the general belief that Congress will be asked to empower the Treasury to take over gold at its present value with a view to retain for itself the profits that would accru as soon as a definite measure of the devaluation of the dollar has been decided on. There can be no doubt that in the present financial position of the Government there is every need and, if need is a justification, a justification also for such a course of action. The Reserve Banks are naturally hotly disputing the right of the Administration to this profit which, they urge, should go to the member banks, who should have owned the gold directly but for the establishment of the reserve System. Considering that the Administration has experienced great difficulty in selling its long-term bonds in the face of its plans for refunding 3,000 million dollars and its need for 3,000 million dollars more for 1934 the gold profit would come in handy and relieve Government of many financial problems, which would otherwise prove not only embarrassing, but also fairly unsolvable. It must be mentioned, however, that in contrast to these somewhat far fetched and too

Air Mail Week

imaginative interpretations of the recent order, there is also a less sensational explanation possible. It is not difficult to see that as a consequence of the Campbell case, in which the Court's finding as to the invalidity of the orders was based on the contention that the Treasury and not the President had been empowered to impound the gold, the Government thought it necessary to issue a new order under the signature of Mr. Morgenthau, and cure the present position of its legal flaw.

N.R.A.—Promise of mort Innovations

There are not many interesting developments in regard to the N.R.A. to record in this week's chronicle. It is possible that drastic innovations are still being planned by the authorities, as, for instance, a Corporation for the financing of foreign trade which, it is widely believed, would be established early in the New Year. This corporation will extend guaranties and long term credits particularly for trade with Russia. The Railroad Committees are, it is reported, drafting legislation for the wholesale unification of the principal systems. Mr. Dudley, the Assistant Secretary for Agriculture, has asserted only lately that no system of control of agricultural production would be possible unless the Government take over all land and decide to retain only the most efficient farms. And finally, President Roosevelt has confirmed the report that he will approach Congress for further powers to effect tariff changes in the course of the negotiations of reciprocal trade treaties with foreign countries.

GERMANY

TRADE OUTLOOK AND STANDSTILL PARLEYS

The year-end always sees to the fore the vexed questions connected with the renewal of the Standstill Agreement and the revision of the concessions accorded therein by creditors to debtors and **vice versa.** In Germany preparations for convening another conference for the purpose of reconsidering the Standstill Agreement have already begun, this time with a little acrimony occasioned by Dr. Schacht's decision to reduce the percentage of cash payment to foreign creditors. But of this more later.

1935—Retrospect

For the present, the business world is engaged in casting its mind back on the experiences of 1933 and attempting to foresee the prospects of the year ahead. There is general agreement that the economic situation reveals unmistakable signs of recovery. It is not lost on any one that the volume of production has increased by 12 per cent. over 1932 and the value thereof by more than 2½ milliard marks. Consumption goods, it is estimated, rose by only 8 per cent. Unemployment registers a fall of 2.3 million since the beginning of the year, which may be considered to be the lowest point in the depression. If it is added that the total wages and salaries did not increase until the third quarter of the year, it will be realised that the expansion in employment had been achieved mainly through a reduction of salaries and wages as well as working hours. Anyway, the distribution of salaries over a larger section of the population may be deemed to have provided a more solid foundation for the recovery in the future.

Trade Pacts

The Government's eyes are turned to the possibility of securing wider outlets for German exports through the revision and increase of trade treaties with foreign countries. The instances of Switzerland and Holland come foremost to one's mind in this connection. The former figures a great deal in the discussions which have already been set afoot in regard to the revision of the Standstill Agreement. The aggrieved foreign creditors point to Switzerland as an instance of invidious treatment which Germany has afforded to her creditors. And it has been contended that, if Germany chose, she could accord the same treatment to this also. It is difficult to see why Germany should not be free to strain every nerve to accommodate the demands of her Swiss creditors, if such demands are also accompanied by the offer to increase the Swiss offtake of German goods. With Holland it has been possible to exchange a number of reciprocal advantages. The commercial relations with Finland have, of late, been given a new twist, as a result of the conclusion of a treaty between Great Britain and Finland, though it is by no means certain that it will not be possible for the two countries to continue to accord each other most-favoured-nation treatment. The question of the trade treaty with France would seem to hang on the balance. The attempts, which have so far been made to come to an understanding, have failed, France trying to drive a bargain, which will leave Germany little or no favourable balance to be devoted to the settlement of claims on herself from other countries. This points to the weakening of the general regard for the triangular balance of international payments. Apart from the foreign trade relations the outlook within Germany seems to be distinctly of the more hopeful kind. Though the popular prejudice against the stores seems to have persisted throughout the year, the boycott has weakened and it is believed that during 1932 the turnover of retail sales within the country will, particularly as a result of the expansion of employment, show a welcome increase.

As mentioned already, the storm over the Standstill tea cup is already in full blast. Mr. Albert H. Wiggins has been succeeded by Mr. Abbot Goodhue, Chairman of the board of the Bank of the Manhattan Company as President of the International Creditors Committee under the German Standstill Agreement and as President of the Standstill conferences. Mr. Goodhue has invited the various creditor committees of the other countries interested in the German Standstill Agreement to an informal meeting to be held in the first half of January before the discussions begin with the German Standstill committee for a prolongation of the present agreement which expires on February 28, 1934. The final Standstill Conference is to commence later.

It will be remembered that the Standstill agreement was first concluded in the middle of 1931 for a period of six months ending with February 28, 1932 and that thereafter it has been renewed every year for a period of one year. The present agreement is, therefore, due to expire on February 28 following; and it is well that attempts should be made from early in the New year to arrive at an amicable understanding between the parties concerned as to the provisions which the new agreement should contain. But it is significant that during the second half of 1933, and particularly in the last quarter, Dr. Schacht has succeeded in effecting a number of improvements on the terms of the previous agreement.

Volume of Standstill Credits

This is of a piece with the general trend of Standstill Agreements to be more and more favourable to the German debtors. In July 1931, when the moratorium was first declared, the short term credits, which were later treated by means of the Standstill Agreement, totalled 6,300 million reichsmarks. On February 28, 1932, the amounts were reduced to 3,800 million and at present they stand, at about 3,000 million reichsmarks. If the depreciation of the dollar and sterling since March 1, 1933, is taken into

Air Mail Week

consideration, the total credits calculated at the present rates of exchange would be reduced still further to 2,500 million reichsmarks. On November 13, an invitation was sent by Dr. Schacht to the foreign creditors to take part in a conference to be held at the Reichsbank on December 5th in discussions regarding the transfer moratorium. At this conference, the creditors naturally urged that payments should be continued to be made 50 per cent. in cash and 50 per cent. in reichsmark scrips; but ultimately Dr. Schacht decided that cash payments should be reduced to a percentage of 30.

Standstill Negotiations

Now that the Standstill Conference is again to be held, the creditor committees have started to evince a highly critical and stiff attitude towards the German standpoint. It is expected that in regard to the renewal of the present agreement the German debtors will ask for an alleviation of the payments to be made. They will probably ask for a reduction of the right of the creditors to demand repayment in reichsmarks under certain conditions stipulated in the agreement. Holland and Switzerland stand on a footing different from that of other countries in as much as the new commercial treaties with the two countries did not contain provisions for the renewal of the German Standstill Agreement expiring December 31, 1933. The Berlin correspondent of the *Financial News* avers however, that renewal negotiations will take place with their representatives in Berlin early in January and the final negotiations with Switzerland will be concluded during the month. The Governments of Belgium and Luxembourg have announced their intentions to begin such negotiations.

Protests from Britain and America

Interest at present centres round the spirit of protests sent by the representatives of the American and British creditors against the high-handed action of Dr. Schacht in deciding after a show of a consultation with them on a reduction of percentage of cash payments from 50 per cent. to 30 per cent. The British Long-term and Medium-term Creditors' Committee have addressed the following letter to Dr. Schacht:

> "Sir,—On November 13, the British Long Term and Medium Term Creditors' Committee received from the Reichsbank, through the Bank of England, an invitation to take part, at a conference to be held at the Reichsbank on December 5, in a discussion with regard to a continuation of the transfer moratorium. The British committee accepted the invitation and sent representatives to Berlin. Similar invitations were extended to and accepted by representatives of Germany's other creditors.
>
> "In view of the terms of the invitation—if for no other reason—the British committee expected, as it was entitled to expect, that at the conference in Berlin not only would a discussion between the Reichsbank and the representatives of the creditors take place, but some regard would be paid by the Rechisbank to such observations as the representatives of the creditors might think fit to offer.
>
> "As the Reichsbank is well aware, all the representatives of the creditors expressed the view that transfer should continue to be made on a basis at least as favourable to creditors as previously, no case having been made out for a reduction.
>
> "Notwithstanding this expression of opinion, the Reichsbank announced on December 18 that those creditors who had previously received 50 per cent. in cash and 50 per cent. in Reichsbank scrip, would for the six months ending June 30, 1934, receive 30 per cent. in cash and 70 per cent. in Reichsbank scrip.
>
> "The British Committee has now received from its representatives a report of the proceedings in Berlin, and after considering that report, fully endorses the views which its representatives expressed at the Conference and in their published statement.
>
> "The British Committee cannot see what useful purpose was served by bringing the representatives of the creditors to Berlin merely to await a decision apparently predetermined by the Reichsbank, and thinks it proper to protest at once and formally against the treatment accorded to the views of the creditors' representatives and against the hardship inflicted upon the creditors by the Reichsbank decision.

The American banking houses to whom the German dollar bonds were issued have also cabled a protest to Dr. Schacht pointing out that "such brusque and unexpected disregard of creditors' cannot but have an unfortunate effect upon German credit and upon thousands of bondholders." They also expressed the hope that "while there is still time reconsideration may be given to the matter."

Dr. Schacht's Defence

In an interview to the Berlin correspondent of *Le Matin*, Dr. Schacht has attempted to defend the action which he took after his conference with the foreign creditors representatives. Dr. Schacht pointed out that, according to an official estimate, Germany would have needed for the period from June, 1933, to May, 1934, an amount of Rm.1,497,000,000 in order to fulfil her interest and amortisation services. As receipts in foreign currencies during this period are estimated at Rm. 520,000,000, the remaining deficit of Rm.977,000,000 has to be covered by the export surplus. It is true, Germany has an export surplus, but receipts in foreign currencies do not at all correspond with the original estimates. According to the latest export figures, Germany would have a monthly deficit of Rm.19,000,000 if the 50 per cent. transfer quota were being maintained; but even after the reduction to 30 per cent. Germany still has to fill a gap of Rm.11,000,000. If one takes into account the fact, that the holders of the Dawes and Young Loans have not suffered the smallest reduction, it becomes obvious that Germany in reality is paying 77 per cent. of her total foreign debts and not 30 per cent. Final-

ly, Dr. Schacht pointed out that his entire aim was to maintain at all costs the stability of the Reichsmark based upon the gold standard. This will assist French currency policy, for though Germany is only a poor country—her gold cover amounts to only 11 per cent.—the assistance of the poor is sometimes of importance.

Official backing for British Creditors?

So far there have been only statements and counter-statements between creditors and the debtors. A new and distressing complication is threatened by the report that the British Government intend to back up the representation of the British creditors with official action. The inspiration for this is derived from the following comment of the *Financial News* on this question in a recent issue:

> "Governmental intervention should not continue itself to talking. There are two weapons —special tariffs and exchange clearing—which are always at the disposal of a Government when dealing with a foreign debtor who can but will not meet his liabilities. There is much admittedly, to be said against both measures, if they have to be converted from a threat into a reality. But the demerits of the second—the exchange clearing system—are by no means sufficient to weigh against its very solid advantages in cases like these."

How far such action as is contemplated by the *Financial News* would be consistent with the general foreign policy, as it is to be at present, is a matter which cannot bear examination within this limited space. Arguing on broad grounds, however, it seems that the British Government would think twice before getting embroiled in a question which, in the present condition of international finance and economy, is best left to itself without the intervention of bellicose governments.

(Continued from page 77.)

types of buildings which have been erected on the old sites mark the gradual architectural transformation of Bombay.

In one important direction it may be said that developments have far exceeded anticipations, and that is on the reclaimed area west of Queen's Road where there will probably be extensive construction during the coming year. Recently four sites had been acquired to the south of Churchgate Station, but it appears that there have been further sales since then, and up to date altogether seven building plots have been sold on the Queen's Road alignment.

Meanwhile the gradual southward extension of Apollo Bunder continues on the Port Trust area to the east of Colaba Causeway. The former barrier to this extension, Arthur Bunder, has now disappeared.

The biggest single scheme in hand at present in Bombay is the construction of the large block on the site of "Watson's Annexe," and here, as well as on the buildings on the site of Arthur Bunder, the making and driving of the concrete piles has been the big operation in the fundamental stage.

The electrical industry is another which has had an unquestionable and tangible improvement. In the suburban areas consumption has gone up and the Chairman of the Bombay Suburban Electrical Supply Limited in the course of his address at the annual meeting observed: "At the same time it is satisfactory to note that the Board is again able to report considerable progress. It must also be encouraging to those shareholders who have occasion to visit the suburban district to see that despite financial depression, the erection of new houses still continues actively in almost all residential areas." The annual statement showed that the number of new consumers connected to the mains during the year increased by 13.5 per cent., and the company's total sales of current increased by 9.5 per cent., while sales to consumers for power purposes and for domestic purposes recorded increases of 15 per cent. To these facts may be added the remark which occurs in the last annual report of the Tata Hydro-Electric Power Supply Company, Limited, that "the company has, for the third successive year, sold electrical energy to its full assumed capacity."

The Indo-Japanese Trade Agreement is treated with sullen silence. No one here misses its significance as a triumph of Ahmedabad and Delhi, and a rebuff to Bombay. It is even said that members of the cotton mill industry are forbidden officially to speak out their minds on this ticklish question. Only the cotton interests are exuberantly outspoken in their welcome to the Indo-Japanese Agreement.

THE PROBLEM OF PRICES

Speaking at the Mansion House on October 3rd, the Chancellor of the Exchequer gave as the first of the four major objectives before the country "a rise in wholesale prices, especially the prices of the primary commodities." This statement represents no change in policy on the part of the Government, for similar expressions of opinion are to be found in the declaration regarding Imperial monetary policy made at Ottawa a year ago, and were repeated last July, while a motion to that effect was carried with Government support in the House of Commons last spring. In short, the country has now for over a year been committed to a policy of raising prices and in fact since the early summer a moderate rise has occurred.

The question of a rise in prices has been obscured by much loose thinking. The first question to be faced is whether a rise in prices is desirable. The Government holds that it is, and public opinion on the whole supports it in that view. Again, the evidence of the past six months, to go back no further, shows that rising prices have in fact been accompanied by expanding trade and decreasing unemployment; while the evidence of 1929 onwards certainly shows that falling prices are reflected in depression and heavier unemployment. Nor is it difficult to see why this should be the case. In a perfect world, possibly, all fixed and continuous charges, such as wages, rents and interest, might be adjusted to a sliding scale determined by the price-level of the moment, so that a tenant, for example, could say to his landlord, "Prices have fallen since last year by 10 per cent. according to the official index number, and so by statute my rent is automatically reduced from £100 to £90"; while the debtor might advance a similar plea when he came to repay his loan. Such a conception of long-term contracts is entirely utopian, and indeed an attempt to put it into practice would raise as many problems as it would solve. Still, as matters stand, every fall in prices involves the transfer of wealth from the debtor to the creditor classes, that is, in many instances, from the producers and employers of labour to the *rentier* and the bond-holder, with the inevitable consequence that the producer first loses heart and in time may end in bankruptcy. Conversely, a rise in prices restores confidence and stimulates enterprises. Thus, for these reasons alone, there is an intimate connection between the volume of trade and unemployment and the direction in which prices are moving. A *rising*, as distinguished from a *high* price-level, is always good for trade.

That is the general case for the policy of rising prices, but it is when we come to its detailed application that the need for careful thinking really arises. First of all, what is the real objective?—a rise in the general price-level or a rise in the prices of particular groups or classes of commodities, such as primary commodities, as emphasised by the Chancellor? These distinctions may appear to be hair-splitting, but in reality they are vital, both to an understanding of the problem and to the correct way of carrying out such a policy.

Firstly, as American experience is beginning to teach us, any rise in prices must be a balanced rise. The upward movement of American prices was in its initial stages confined to primary commodities. This afforded immediate relief just where it was most needed, namely to the farmers and to those who were engaged in financing them. The result was a revival in purchasing power in the agricultural areas which was quickly reflected in fresh orders for manufactured products. This stage lasted until the middle of July, and brought about not only a new movement of money and goods inside the country, but also the fresh importation of raw materials from abroad. This gave a new and vitalizing impetus to all primary producing areas, and last summer it appeared that the rise in American prices had provided the impact that was needed to set world trade in motion.

Unfortunately, the rise in American prices could not be confined to primary products, but spread to other fields. This is not the place to discuss the passing of the National Industrial Recovery Act, or the introduction and enforcement of labour codes. Suffice it to say that one consequence of this side of the Administration's policy was a drastic increase in production costs, inevitably reflected in a rise in retail prices. Simultaneously it became clear that the psychological impulse of the initial rise in prices had gone too far. Manufacturers had over-stocked themselves with raw materials and had over-estimated the revival in general consumption. The result was a recession in primary commodity prices just at the time when the advance in production costs and retail prices was gaining momentum. Hence to-day we find that since the end of June the real income of the American farmer has fallen in a marked degree. As the New York correspondent of the *Economist* graphically expressed it in a letter dated September 25th, "it now takes twice as many bushels of wheat or pounds of cotton to buy a pair or ordinary farm overalls as it took three months ago."

The vital lesson here is that if the attempt is made to force through too rapid an advance in prices by artificial means, the advance is bound to be unbalanced, so that in the end it does as much harm as good. This really is the answer to those critics who complain that our own monetary and economic policy is slow and ineffective. It is almost impossible to bring about by Government action alone just the right amount of increase in each particular price and cost all over our complex economic field. Whether a rise in prices is engineered by direct and involuntary inflation or by other and more controllable methods, if it proceeds too fast or beyond a certain limit, it becomes a disorderly movement, creative of new injustices and in the end destructive of fresh enterprise and confidence. In England informed opinion has already suggested one rough-and-ready limit to a reasonable advance in prices, namely that it should not go so far as to necessitate an increase in money wages in the sheltered trades. Mr. Chamberlain conceivably had this limit in mind when he laid emphasis upon an advance in the prices of primary commodities, and mentioned all the predominantly agricultural countries instead of confining himself to Great Britain. Again, interpreting his possible thoughts in homely language, it is estimated that the quantity of cotton in a shirt costing ,say, ten shillings is of a value of only about sixpence. It would be possible for the price of raw cotton to rise by 50 per cent. from sixpence to ninepence, without adding more than the infinitesmal amount of 2.5 per cent. to the total cost of the shirt. Thus a substantial rise in primary prices could take place without affecting retail prices at all, but if the rise spread to the wage and other costs of the spinner, weaver, and shirt-maker, then a substantial rise in retail prices, sufficient to call for a general rise in wages, would follow. This is one of the dilemmas with which America is faced to-day.

Granted, therefore, that our objective is a rise in primary prices which should not be confined to this country, how should it be carried into effect This introduces the distinction we made on a previous page between a rise in the general price-level and a rise in the price of particular commodities, for this distinction has a vital bearing upon our policy. Here, once more, careful thinking is necessary. The general level of prices depends upon general factors, largely of a monetary character. These include the amount of money in existence, whether currency or bank-deposits; the rate at which it is changing hands; the use people are making of their incomes; how freely money is being spent; to what extent it is being saved; and last but not least, the extent to which savings are being hoarded or held in idle bank-deposits, or on the contrary are being invested in productive enterprise. Without going further into difficult questions of modern monetary theory, it may be said, generally speaking, that if a Government wishes to bring about a rise of prices, and is careless of the consequences, the only certain method is inflation. If it rightly shrinks from the inherent dishonesty of such a policy and from the consequences—some of which we have already outlined—it still has other but less certain means at its disposal. It can, with the co-operation of its central bank, make money cheap and plentiful, thereby forcing down bank-deposit rates and the yield on "safety-first" securities, and so drive the savings of the nation into investment in productive enterprise. It can remit taxation to the absolute limit of safety, and so make enterprise more remunerative and add to the purchasing power of the community. If a surplus of idle capital still remains, it can start public works financed out of loans, on the assumption that if private enterprise cannot or will not absorb the savings of the nation, then public enterprise must fill the breach. It should be needless to add that all this must be done in such a way as to promote and not impair general confidence in the future of the nation and in its financial stability.

On the other hand, if the raising of the price of particular commodities is the objective, then the method to be adopted is that of the control, reguation and restriction of output, as exemplified in our current agricultural policy, so as to bring the supply of that commodity within the limits of the demand. It is this method that lies at the back of the 1930 Coal Mines Act, the Agricultural Marketing Act of this year, the quota provisions of the Ottawa Agreement and our more recent Commercial Treaties with foreign nations, and the new schemes dealing with pigs and milk. It necessarily involves the regulation of imports as well as of home production, and so impinges upon problems of international and Imperial trade and political and commercial relations. The adoption of this method calls for great skill to ensure that it does not depress rather than raise the prices of primary commodities in the world's agricultural countries taken as a whole.

The real question for us to decide is which method ought we to adopt—that of raising the general price-level, or that of raising the prices of individual commodities? Or is it possible to combine them both? Some members of the Free Trade school of thought have come out boldly for the first method of general monetary and economic action directed towards a raising of the general price-level. They attack the second method on the ground that its whole motive is to raise prices by promoting scarcity, whereas the first method consists of the raising of prices by increasing purchasing power; and they point out, with some theoretical justification, that to raise by artificial means the prices of a limited list of specific commodities involves, in the absence of an advance in the general price-level, an equivalent depression of prices elsewhere. A purist could proceed to argue that the supply of commodities can safely be left to look after itself, if only Nature is left free to take her course. If there is a glut, the least efficient producers will one by one be driven out of the field and into bankruptcy, until finally the supply becomes adjusted to the demand. It is because of past attempts to regulate sales and bolster up prices that widespread gluts have arisen to-day.

The reply to these arguments is that we have to take the facts as we find them, and, whatever the cause, there is no doubt that a large number of primary producers are working at a loss. Were they all to be left to their fate, so many might be driven out of the field that in a very short time glut might be replaced by scarcity. Again, once agricultural production has been killed, it cannot be revived at a moment's notice. Harvests take time to ripen, and livestock takes time to reach maturity. It is quite a tenable proposition that in the world's present plight it is no longer safe to leave Nature free to work out its cure. The patient may die in the meantime.

It remains to sum up this examination of the problem. The first point which emerges is that we must not seek to bring about too rapid an increase in prices, and here we can regard American experience as a serious warning. Next, in making credit cheap and plentiful, we are working along the right lines and are already achieving some measure of success. If simultaneously we take advantage of the present plethora of money and virtual unemployment of both short-term and long-term capital to complete our task of refunding the National Debt upon a 3½ per cent. or even a 3 per cent. basis, we will have laid the foundation for a remission of taxation and the revival of general purchasing power and enterprise in years to come; and the excision of wasteful and unproductive Government expenditure will help further towards that end.

The promotion of public works of a productive character may also have its uses, but caution is necessary in two directions. Firstly, care must be taken to see that such works are really productive, and to ensure that they do not add to the future interest burden of the nation. Secondly, they must only be undertaken so long as they bring into employment capital which otherwise would have lain idle. The moment private enterprise revives and begins to compete with public enterprise for such capital as is available, then public enterprise should give way. The promotion of public works should be regarded as a stop-gap, designed to meet an abnormal state of affairs, in which capital is afraid to seek its usual employment in private channels.

So much for methods designed to stimulate the demand for commodities. When we come to the question of regulating their supply, still greater care is necessary, and there the governing principle must be that of elasticity. Any form of regulation, whether marketing or quota, tariff or treaty, should be elastic, so that it can be modified in the right direction at a moment's notice. It is true that some degree of stability is necessary, and to some extent this justifies the fact that the Ottawa Agreements, for example, were designed to remain in force for a period of five years. Yet it might have been advantageous if machinery had been simultaneously set up to enable specific provisions in those Agreements (and also in our foreign Commercial Treaties) to be modified without delay, and such machinery should be free from political pressure either at home or in the Dominions. Once any Government has decided that it is necessary for it to intervene in matters concerning the production and marketing of commodities, it should realize that it has undertaken a difficult and intricate task, which will frequently call for quick and certain decisions. Furthermore, it should regard its intervention as a temporary palliative necessitated by the abnormal conditions of the day. Once trade has begun to revive and gluts to disappear, a Government should leave production and trade free to take their normal course.

This suggests that we should proceed slowly and cautiously, aiding and guiding Nature, instead of usurping its functions. Within these limits, there is a case to be made out both for the general economic and monetary policy of the Government and for its efforts to regulate the supply of commodities. We should, however, recognize that organized intervention of this kind means that we are treading upon very dangerous ground, and such intervention in the normal course of trade should be terminated as soon as circumstances permit.

(Lloyds Bank Monthly)

PUBLICATIONS OF THE LEAGUE OF NATIONS

WORLD ECONOMIC SURVEY, 1932-33

Just out ... Price: bound in cloth Rs. 5 8 0

348 pages ... ...

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the decline in international trade, the magnitude of agricultural stocks compared with current production, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

Price: Rs. 2 12 0

155 pages ... ...

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

STATISTICAL INFORMATION

INDIAN CUSTOMS REVENUE

According to returns received in the Department of Commercial Intelligence and Statistics, the grand total of gross Indian Sea and Land Customs Revenue (excluding salt revenue) collected during the month of December, 1933, amounted Rs. 4,01 lakhs as against Rs. 4,27 lakhs in the preceding month and Rs. 4,20 lakhs in December, 1932. The total revenue realised in the nine months ended December, 1933, was Rs. 36,40 lakhs as compared with Rs. 40,09 lakhs during the same period last year. Import duties accounted for Rs. 26,58 lakhs of this amount, export duties Rs. 3,32 lakhs, exercise duties on motor spirit and kerosene Rs. 3,45 lakhs and Rs. 2,12 lakhs respectively and Land Customs and Miscellaneous Rs. 93 lakhs. Increases were noticeable under import duties on machinery, motor cars, liquors, dyes and colours, wheat, tea, railway plant and rolling stock, betelnuts, lubricating oils, wood pulp, paper and stationery, toys, games and sports goods, cinematograph films, exposed and wireless reception instruments and apparatus ; export duties on jute, raw and manufactured, and hides and skins, raw, excise duties on motor spirit and kerosene and land customs receipts also showed increases. On the other hand, import duties on cotton piecegoods, sugar, tobacco unmanufactured, raw cotton, metals other than iron and steel, iron and steel, motor spirit, kerosene, cotton yarn and thread, pneumatic rubber tyres and tubes, silver, silk and artificial silk mixtures, artificial silk yarn and thread, tobacco, manufactured, cutlery and hardware, molasses, silver wire and thread, electric lighting bulbs and Portland cement showed noticeable decreases. The protective special duties on private imports during the nine months ended December, 1933, aggregated Rs. 8,26 lakhs. The duties on Government stores, inclusive of protective duties collected thereon, amounted to Rs. 19 lakhs, as compared with Rs. 27 lakhs in the corresponding period of the preceding year.

INDIAN COTTON INDUSTRY

The Millowners' Association, Bombay, has just published the annual mill statement for the cotton year ended 31st August, 1933. The statement shows that the total number of equipped mills in Bombay is 344 as against 339 on 31st August, 1932.

The total number of spindles in the equipped mills of the country now stands at 9,572,000, an increase of 65,000 during the year. The total number of looms is 189,040, an increase of 2,600 during the year. In Bombay City and Island, the number of spindles fell to 33 lakhs from 34½ lakhs, and the number of looms from 77,000 to 73,000. In Ahmedabad, the number of spindles increased by 150,000 to 1,978,000 and the number of looms increased from 42,500 to 47,200. In the United Provinces, the number of spindles and looms were respectively 664,000 and 8,906 ; both these figures are slightly higher than last year's figures. In the Madras Presidency, there was an increase of 43,000 spindles and 300 looms during the year, the total figures on 31st August, 1933, being 864,000 spindles and 5,550 looms. In the Central Provinces, there was no change in the number of looms, but a very slight increase in the number of spindles, the figures at the end of the year being 306,000 spindles and 5,723 looms. In Central India, the number of spindles increased by 12,000 to 314,000 and the number of looms by 135 to a total of 8,339. In Bengal the number of spindles increased by 8,000 to a total of 333,000, but the number of looms increased by 700 to a total of 5,976. In the Punjab, the number of spindles increased by 8,000 to a total of 157,546, and the number of looms increased by 150 to a total of 3,758. The changes in the number of spindles and looms in other centres of the industry were insignificant.

The total paid-up capital of the industry on the 31st August, 1933, amounted to Rs. 39.67 lakhs, a drop of Rs. 66 lakhs compared with last year. In Bombay City and Island, the total paid-up capital of the completely equipped mills fell by Rs. 79 lakhs to the figures of Rs. 13.96 lakhs, but this loss was to some extent made up by the additional capital invested in new mills in other centres of the industry.

COST OF LIVING IN BIHAR

In the month of August, 1933, the cost of living in Bihar and Orissa rose by 3 points at Monghyr and fell by 5 points at Jamshedpur, while in all other centres it was practically stationary. The rise of 4 points at Monghyr was mainly due to the simultaneous rise in the prices of gram and pulse under "food-grains" and ghee and potatoes under "other articles of food," while the fall of 5 points at Jamshedpur was caused by the simultaneous fall in the price of rice, gram and pulse under "food-grains," fish, meat and ghee under "other articles of food," and under "fuel and clothing." The price of clothing continued to remain stationary in all centres except Muzaffarpur, Monghyr and Jamshedpur where it fell by 16, 9 and 13 points respectively. As compared with the corresponding month of the previous year, the cost of living was lower by 7 points at Patna and Jamshedpur, by 2 points at Muzaffarpur, by 3 points at Monghyr, by 19 points at Jharia and by 16 points at Ranchi, while at Cuttack it was higher by 4 points. The marked fall of 19 points at Jharia was caused by the simultaneous fall in the prices of all articles at that centre. In Ranchi the lower cost of living was due to the simultaneous fall under "food-grains," other articles of food," lighting and fuel" and "clothing." The percentage of fall below the pre-war normal level was 4 at Patna, 6 at Muzaffarpur, 3 at Jharia, 11 at Cuttack and 10 at Ranchi, while Jamshedpur and Monghyr recorded a rise of 1 and 5 per cent. respectively over the pre-war level.

MYSORE GOLD MINES OUTPUT

The following are the returns of the Mysore Gold Mines for the month of December, 1933:—

Champion Reef.—10,380 tons current ore treated produced 5,080 fine ozs. and 17,391 tons old tailings produced 427 fine ozs., making a total of 5,507 fine ozs. of gold.

Mysore.—15,400 tons of current ore treated produced 7,922 ozs. of fine gold.

Nundydroog.—18,000 tons of current ore yielded 9,999 fine ozs., 2,549 tons of old dump sand retreated yielded 150 fine ozs., making a total yield of 10,149 ozs. of fine gold.

WORKING CLASS COST OF LIVING IN BOMBAY

In November, 1933 the working class cost of living index number for Bombay City, with July, 1914 prices equal to 100, was 101, being one point higher than that for the preceding month. The index number for food articles rose by one point to 92.

In October, 1933 the working class cost of living index number for Ahmedabad, with the average prices for the year ended July, 1927 equal to 100, was 73, the same as in the preceding month. The index number for food articles remained stationary at 63.

In October, 1923 the working class cost of living index number for Sholapur, with the average prices for the year ended January 1928 equal to 100, was 68, being one point lower than that for the preceding month. The index number for food articles declined by one point to 56.

In October, 1933, the Bombay wholesale prices index number, with July, 1914 prices equal to 100, was 98, the same as in the previous month. In comparison with the previous month, the index number for food articles declined by one point to 100. Among food grains, jowari rose by three points, while rice, wheat and barley decreased by 5, 2 and 3 points respectively. Cereals declined by one point to 82. Pulses remained stationary at 81.

The index number for the whole group of food grains fell by one point to 82. The index number for the "sugar" group advanced by one point to 108 on account of a rise of three points in raw sugar (gul). The index number for the other food group fell by one point to 152, owing to a drop of five points in turmeric. The index number for the non-food group was 96, the same as in the preceding month.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

THE INDIAN MERCANTILE INSURANCE
CO., LTD.,

Total	22,58,164	Total	22,58,164

Extracts from Directors' Report:

Mayurbhanj Forests—The working of the forest has been very much restricted owing to reduced demand of sleepers by Railways. It has been very difficult to secure even a fair portion of the orders owing to keenness of competition which also resulted in most cases in lowering of prices.

Every endeavour has been made to effect economy to reduce production cost and it is hoped that with an increase in the earnings the Railways will eventually take their normal supplies and offer a better price.

Accounts—After providing for all charges the Profit and Loss Account shows a debit balance of Rs. 57,381-13 which is being carried forward.

Owing to their inability to attend the Directors' meeting, Sir E. J. Buck, Kt., C.B.E., Rai Bahadur Rala Ram, C.I.E., I.S.O., Mr. T. Leslie Martin and Mr. T. C. Borooah did not sign the Accounts.—Martin & Co., Managing Agents.

MANDRA-BHON RAILWAY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	27,50,000	Block	21,62,020
Debts	61,507	General Charges, etc.	4,73,193
Profit & Loss	76,760	Suspense A/c.	40,012
		Outstandings	83,749
		Cash & Invests	1,29,293
Total	28,88,267	Total	28,88,267

Extracts from Directors' Report:

Report for the year ended 30th September, 1933.

The statistics of traffic for the past three years are as under:—

	1930-31.	1931-32.	1932-33.
Number of Passengers	373,657	344,954	407,732
Gross Earnings (in Rupees)	1,38,526	1,34,026	1,52,705
Merchandise (in Tons)	20,627	25,271	22,787
Gross Earnings (in Rupees)	40,149	42,312	41,049

Coaching Traffic.—The above comparative statement shows that the number of passengers carried and the earnings therefrom both improved considerably during the year under review.

Goods Traffic.—Goods traffic figures slightly declined during the past year due to partial failure of wheat, gram and moong crops on account of excessive rains last summer.

Road Rail Conference.—The Conference, mention regarding which was made in the Directors' Report last year, was held in Simla in April last for the purpose of considering the Report of the Committee appointed by the Government of India to go into the question of Rail and Road Co-ordination in all parts of India. The Chairman of this Company attended the Conference as the Representative of all the Branch Line and Light Railways in India. The Resolutions passed at the Conference are receiving the consideration of the Government of India.

General.—The Accounts show that the working of the line for the year, with the addition of the Rebate amounting to Rs. 50,001-6-11 payable by Government has resulted in a profit of Rs. 1,20,471-12-5 to which must be added the sum of Rs. 11,287-14-11 brought forward from last year's accounts, making Rs. 1,31,759-11-4 in all.

The Directors declared an ad-interim dividend at the rate of 4 per cent. per annum payable less Incometax, which absorbed Rs. 55,000, leaving a balance of Rs. 76,759-11-4 which they propose to apply as follows:—Dividend for the half-year ended 30th September, 1933, at 4½ per cent. per annum (*making* 4¼ per cent. for the year) payable less Income-tax Rs. 61,875, balance to be carried forward Rs. 14,884-11-4, total Rs. 76,759-11-4.—E. C. Reid, Chairman, Purshotamdas Thakurdas, Ambalal Sarabhai, Frederic F. Stileman, R. H. Irani, Directors.

TATA HYDRO.

Messrs. Tata Hydro-Electric Agencies Ltd., Agents for the following three Hydro-Electric Companies report that the gross earnings of the said Companies for the month of December, 1933 and for the fiscal year ending December 31, 1933, subject to adjustments, were as compared with the corresponding month of the previous year:—

	For the month of Dec. 1932 Rs.	For the month of Dec. 1933 Rs.
Tata Hydro-Electric Power Supply Co., Ltd.	3,95,546	3,79,257
Andhra Valley Power Supply Co., Ltd. ...	5,38,244	4,78,373
Tata Power Co., Ltd.	5,35,102	5,00,270

	For the Fiscal year up to Dec. 31, 1932 Rs.	For Current Fiscal year up to Dec. 31, 1933 Rs.
Tata Hydro-Electric Power Supply Co., Ltd.	27,77,368	24,16,421
Andhra Valley Power Supply Co., Ltd. ...	32,58,542	28,22,143
Tata Power Co., Ltd.	30,17,353	29,15,857

CHULSA TEA CO., LD.

The restricted crop for the 1933 season was 3,626,105 lb., of which 3,053,469 lb. was for export and 572,636 lb. was for internal consumption. The unrestricted crop for 1932 was 4,654,034 lb. Sales to date are as follows:—London, 1,235,040 lb. at 1s. 0.16d. a lb. (against 1,531,360 lb. at 6.42d. a lb.); Calcutta, 236,560 lb. at As. 4.7 a lb. (against 366,400 lb. at As. 4.0 a lb.).

SYLHET TEA CO., LD.

The crop harvested for 1933 under the restriction scheme was 258,613 lb., of which 217,779 lb. was for export and 40,834 lb. for internal consumption. In 1932 an unrestricted crop of 338,080 lb. was secured. To date the directors have sold 80,855 lb. in London at 11.12d. per lb. (against 125,640 lb. at 6 1/5d.), and 11,200 lb. in Calcutta at 4-2a. (against 21,000 lb. at 3-6a.).

BAGRACOTE TEA CO., LD.

Under the Crop Restriction scheme the output for the 1933 season was limited to 1,260,996 lb., of which 1,061,892 lb. was for export and 199,104 lb. was for internal consumption. An unrestricted crop of 1,526,765 lb. was harvested in 1932. Sales effected to date are as follows:—London, 463,680 lb. at 11.81d. a lb. (against 576,880 lb. at 6.32d. a lb.); Calcutta, 77,440 lb. at As. 4.5 a lb. (against 65,680 lb. at As. 4.1 a lb.).

CALCUTTA LANDING & SHIPPING CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.
Capital	... 6,25,000	Block (net)	... 3,36,950
Reserve	... 1,02,940	Stores, etc.	... 25,791
Debts	... 1,06,669	Outstandings	... 2,12,159
Profit & Loss	... 34,826	Investments	... 2,09,250
		Cash & Deposits	... 85,185
Total	... 8,69,435	Total	... 8,69,435

Extracts from Directors' Report:

Report for half-year ending 31st October, 1933 shows a profit of Rs. 50,076-8-2 which including the balance of Rs. 7,380-8 brought forward from the previous half-year amounts to Rs. 57,457-0-2.

After providing Rs. 11,721-14-8 for Depreciation and Rs. 19,908-11 for Extraordinary Repairs and other Adjustments for the half-year, there remains Rs. 34,826-6-6 which we recommend should be allocated as follows:—In payment of Dividend at rate of As. 6 per Share for the half-year, free of Income-tax, Rs. 23,437-8, transfer to Reserve Account Rs. 2,500, carry forward Rs. 8,888-14-6, total Rs. 34,826-6-6.

As anticipated business has been satisfactory during the half-year under review. Prospects are still encouraging.—K. J. Nicolson, E. H. Marshall, H. F. Bateman, H. F. Wheeler, Directors.

NEW MANBHOOM COAL COMPANY.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.
Capital	... 3,00,000	Block (nett)	... 4,30,966
Reserves	... 6,16,331	Stores	... 9,054
Debts	... 51,232	Stocks	... 34,793
		Outstandings	... 1,65,831
		Cash and investments	... 3,24,548
		Loss	... 2,371
Total Rs.	... 9,67,563	Total Rs.	... 9,67,563

Extracts from Directors' Report:

The directors of the New Manbhoom Coal Company submit their audited accounts for the half-year ended September 30, 1933. The revenue account shows a profit of Rs. 15,528 on the half-year's working, but a sum of Rs. 23,360 for depreciation requires to be provided for. On the credit side of the profit and loss account there is Rs. 1,209 representing sundry adjustments, and against this a loss of Rs. 407 on the Howrah depôt is shown. The nett result is a debit for the half-year of Rs. 2,370. The directors propose transferring a sum of Rs. 20,000 from general reserve account and recommending to the shareholders that a dividend of 8 annas a share be paid, leaving a balance at credit of Rs. 2,629 to be carried forward. Development was carried out during the period covered by the report in both 14 and 15 seams in consequence of increased despatches. Work on the preparation of a new slant haulage road intended to facilitate working was undertaken in 15 seam. No new plant was installed during the six months covered by this report and none will be required in connection with the development above referred to. Raisings for the six months totalled 41,744 tons, while 40,473 tons were despatched. No. 14 seam was reclassified as "selected grade" coal. The immediate outlook is better as the result of increased acceptances by the Indian Iron and Steel Company, and it has been possible to reduce the cost per ton considerably.

BANKING HALF YEAR

THE BANK OF INDIA LIMITED

The Profit of the Bank of India Limited for the year ended 31st December, 1933 including the sum of Rs. 3,40,864-3-1 brought forward amounts to Rs. 16,93,014-6-11.

WORLD OF INDIAN FINANCE

Calcutta, January, 16, 1934.

The Controller of the Currency's communique giving the results of this week's sterling auction affords eloquent testimony to the demand for money. Against a tender of £28,620,000 last week, this week's tenders reached the staggering total of £42,190,000 at 1s. 6 1/16d. This latter record recalls to our mind the staggering tenders made in the period November, 1932 to January, 1933, when the average weekly tender exceeded £40 millions and the highest tender received by Government so far, to the best of our recollection, is £48,900,000 on January 4, 1933. The reason for the continued tightness of money is, however, obvious. The result of the Treasury Bills operations has been practically to net in all the funds releasd by the Treasury Bills Maturities during the week. All commidity markets are buoyant. Jute has gone up by 10 annas in comparison with last Friday's quotation while hessians have maintained the increase of half an anna which occurred on Saturday last. Notwithstanding the temporary ease in 3½ per cent. Paper which occurred on Saturday, bringing the price from Rs. 83-8 to Rs. 83-3 as a result of profit-taking on the part of weak operators, giltedge continues to maintain a firm tone. The strength of the securities market must be attributed partly to the steady tone impared by the London market, and partly to the sentimental effect of the improvement shown in the Treasury Bill rate—which has come down from Rs. 2-11-7 last week to Rs. 2-8-11 this week. We believe that the strength in giltedge is also due to a hope of a reduction in the income-tax liability. Though it is likely that a temporary reaction may set in as a result of profit taking, we believe that the securities market will continue to show substantial strength during the rest of the year, provided the London market does not show any serious setback.

Exports of gold during the last week were reported to be in the neighbourhood of one crore and as the entire stock of accumulated gold in Bombay has not been shipped, it is possible that the demand for money on this account will continue. The movement of cotton will also contribute to the tightness of money, but it is doubtful if it will continue for very long.

The meagre allotment of 2 1/3 per cent. at the last sterling auction is a factor in favour of the rupee-rate. The indications are that the Government will probably be able to buy substantial intermediate sterling before the next auction. As, however, the offer of Treasuries is limited to a crore and a half and there are no intermediates, there will be little inducement for banks to bring in more funds than are absolutely necessary.

The last statement of affairs of the Imperial Bank shows a reduction in the outstandings of the ways and means advances to Government. In view of the heavy purchases of sterling which seem likely during this week, it should not be surprising if Government have again recourse to the Bank for assistances, particularly in view of the diminished receipts of revenue during the bulk of this week as a result of holidays.

Exchange has been very firm due to monetary stringency and to gold in Bombay being very near to parity. Instead of selling T. T. to the Government at 1s. 6 3/32d., which is the tap rate, banks and business houses did business on the basis of two lots at 1s. 6 3/32d., and one lot at 1s. 6 1/16d. Business was done at 1s. 6 1/16d., for January T. T. Bombay led the market by quoting 1s. 6 1/16d., up to mid-February.

The closing rate rases are: 1s. 6 1/16d., January T. T.; 1s. 6 1/32d., February-March T. T.; 1s. 6d., April-May T. T.; and 1s. 5 31/32d., June onwards.

Bills may be quoted: 1s. 6 3/16d., January-February; with some buyers at 1s. 6 5/32d.; 1s. 6⅛d., March-April; and 1s. 6 3/32d., May-June.

Money was in great demand and considerable pressure was felt. Interbank money was quoted 3 to 3½ per cent. Firms' money for call and three days notice quoted ¾ per cent. Onemonth deposits quoted 1¾ per cent., twomonth deposits 2 per cent. and threemonth deposits 2¼ per cent.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3½ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

For further particulars please apply at any one of our Branches.

Last week it was observed that, if President Roosevelt were keen on doing a large part of the Government's financing for 1934 with the profits derived from the revaluation of the gold reserves, he would have to definitely devalue the dollar and provide for its stabilisation at that level and that to avoid the hardships, that might arise from the rivals in exchange depreciation, he would have to enter into an understanding with Great Britain and France in regard to the stabilisation of the world's currencies. Though this reasoning was advanced on a purely hypothetical basis, there was, no doubt, a faint hope that with the New Year the chaos of international exchanges had neared its end. A less incomplete account of President Roosevelt's message to Congress than was available in the Indian press and the results of the monetary conference at White House induce the belief that some more complications are yet in store for the dollar and international finance in the future.

Frankly, it is difficult to put together the various items of news that trickle in from America. The most authoritative pronouncement must be looked for in President Roosevelt's message to Congress in which, as our Overseas columns show, the President expressed the view that most foreign countries are not in a position to take up the responsibilities involved in any attempt to stabilise the exchange value of their currencies. One would be justified in thinking that, in as much as this description would not apply to the state of affairs or opinion in Great Britain or France, the two countries that count, in this question of stabilisation, Mr. Roosevelt's statement expresses only his own disinclination to force the pace of stabilisation.

The week has brought the news that following the Monetary Conference at White House Mr. Roosevelt in a special message to Congress has recommended a minimum cut of 40 per cent in the gold content of the dollar and has asked for the nationalisation of the country's entire gold supply. Thus Mr. Roosevelt has fixed the upper limit of the devaluation at 60 per cent. The request for measures to secure the nationalisation of the country's gold supply marks a further development of Mr. Roosevelt's ideas in regard to gold. It was only towards the end of December that Mr. Roosevelt published his last gold order, according to which he gave the Treasury power to impound all gold in the hands of private agencies. The significance of this order was discussed in these columns earlier; and the safest interpretation of it would be that Mr. Roosevelt wanted to eliminate the distinction he had made in favour of private holders holding less than 100 dollars in gold. It was, of course, asserted in various quarters that this order was only intended to pave the way for the Government getting all the gold of the Federal Reserve system, with a view to appropriate the profits that would emerge as soon as a definite measure of the devaluation of the dollar had been decided on.

It is a question how far the present recommendation of the President to Congress signifies a confirmation of the reports that have been current in America since the publication of the last gold order. Mr. Roosevelt himself makes it clear that "in establishing permanent metallic reserves in the possession and ownership of the Federal Government we can organise a currency which would be simple and adequate." A greater degree of state control in respect of the yellow metal which has been the basis of the world's economic system and which it has rocked violently during the past few years as in an earthquake of severe intensity, would certainly be conducive to a better regulation of values and should therefore be welcomed. Mr. Roosevelt himself points out that the transfer of gold in bulk was essential only for payment of international trade balances and that therefore "it would be a prudent step to invest in the Government of the nation the title to the possession of all monetary gold within its boundaries and keep gold in the form of bullion rather than coin." He claims that he is asking Congress by a specific enactment to vest in the United States Government the title to all supplies of American owned monetary gold with the provision for payment for it in gold certificates. According to him the total stocks of gold would serve a permanent metallic reserve which would change in amount only as far as necessary for the settlement of international balances or might be required among the nations for redistribution of the world's stock of monetary gold.

So far it is only a reiteration of the principles which the advocates of the gold exchange standard in the former days had already familiarised the world with. And in America measures such as have been recommended by President Roosevelt are quite understandable if only as a marked reaction from the days in which the cupidity of private parties for possessing gold drove the entire financial system to the verge of bankruptcy and ruin. The significance of this recommendation must be judged from two standpoints: (1) its place in any plan or programme that Mr. Roosevelt might have on hand in regard to the regulation of internal finance and (2) its significance to what we have already called the foreign policy of the American financial administration. As regards the former, it is difficult to resist the notion that the measures which Mr. Roosevelt has recommended are only another step towards the acquisition by the State of the gold reserves of the Federal Reserve system—an idea with which Mr. Roosevelt is credited by almost one and all. Strictly speaking, it is difficult to see what is wrong, ethically or from the practical standpoint, with any such measure. The Federal Reserve banks are, it is

(*Continued on Page 135*)

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

THE TASK BEFORE THE NEW FINANCE MEMBER

At the threshold of Sir George Schuster's career in India, we had the temerity to offer advice and to formulate suggestions as to what he might do during his five years' regime in order that he could leave Indian economy on a sounder basis than when he took charge. Our suggestions on that occasion came under three groups: (1) the banking problem; (2) the gold problem; and (3) the silver problem. We will have the opportunity, on a later occasion, to review the results of Sir George's administration in relation to the problems we had posed. Our task to-day is to indicate what, in our view, should be essayed by Sir James Grigg during his stewardship; and we may summarise our views under four heads: (a) the Reserve Bank and banking problem; (b) the prices problem; (c) the economic problem; and (d) the credit and ways and means problem. It were best that we dealt with these topics in the order in which we have enumerated them. As regards the Reserve Bank we are yet in the dark as to the exact time-table which the Government propose to follow in connection with the subsequent stages of the enactment of the Reserve Bank Bill. We do not know whether Sir George Schuster would, ere he retires, complete the measures for the public issue of shares, allotment, appointment of the Governor, Deputy Governors and Secretary, and nomination of the members of the Central Board and Local Boards. We have heard it said that no action could be taken till the Secretary of State has consulted experts in London and made sure that conditions are favourable for the inauguration of the Reserve Bank. It might, therefore, happen that it is Sir James Grigg that will have to attend to the important preliminaries connected with the creation of the Reserve Bank.

* * *

So far as the public issue of shares and supervision of allotment are concerned, it has already been decided that a committee of the Legislature would be associated with the Central Board in order to ensure that the detailed instructions given in the Bill in this behalf are being given effect to in letter and in spirit. It would, therefore, mean that the most serious responsibility in regard to the preliminaries is in connection with the first appointments. We cannot do better than request the attention of the new Finance Member to the detailed discussion of this aspect of the matter which *Eavesdropper* has furnished in the Clive Street Gossip section. We wish to emphasise the warnings that he has given and underline the suggestions that he has made; and we press both to the earnest notice of Sir James as coming from one who has been intimately associated with the Reserve Bank discussions both during Sir Basil Blackett's tenure of office and during Sir George's regime; and who has the repute of stating his views without fear or favour.

* * *

As for the banking problem, we have, at the outset, to express our disappointment that while the banking enquiry was initiated by Sir George with elaborate paraphernalia and while the results of that enquiry are embodied in over a hundred volumes of detailed investigation and careful deliberation, the Government have shown so far no signs of appreciation of the value and significance of the recommendations of such an important enquiry. For all that has taken place, Sir B. N. Mitra and the respective presidents of the provincial committees and their various colleagues need not have laboured and embodied the conclusions of their labours in voluminous records. Sir George did the correct thing by initiating the enquiry but failed to avail himself of its full advantages by neglecting to take prompt and comprehensive action on the lines indicated by the committees. It is now up to Sir James to arrange for his department to undertake a detailed study with a view to early and fruitful action. In such a study and in the launching of the necessary measures, Sir James will have the advantage of competent advice and effective collaboration from the Reserve Bank whose inauguration might be expected in the very near future.

* * *

We may now turn to the prices problem. We would like to urge, in the first place, that the time has arrived when the fetish of stability of the international value of currencies must give place to complete faith in the stability of internal prices. The new economics of this era has been propounded, with great daring and considerable skill, by Sir Basil Blackett in his epoch-making book, *Planned Money*. Even with greater daring and more arresting skill President Roosevelt has put planned money into action. As Professor Keynes remarked recently, there are more chances of the success of the American experiment than of its failure. The world over, the new recognition has grown of the vital need for taking all those measures that would ensure stability of internal prices. Towards this end, devaluation of currencies is the order of the day. Paul Einzig, in his latest book, *The Sterling-dollar-franc Tangle*, takes more or less the same view as the American President who in his famous statement said: "The world will not long be lulled by the specious fallacy of achieving a temporary, and probably an artificial, stability in foreign exchange on the part of a few large countries only. The sound internal economic system of a nation is a greater factor in its well-being than the price of its currency in changing terms of the currencies of other nations." The eminent author considers that those who seek to maintain the stability of world currencies on the old parities or somewhere near the old parities are fighting a losing battle.

> "The powers working towards a general depreciation of currencies are much stronger than those working towards stabilisation. If no solution is found for the economic deadlock, it will solve itself automatically through the inevitable depreciation of currencies." He has no patience with those who make out that inflation is equivalent to the destruction of civilisation. This contention is dismissed by him as absurd.
>
> "Even in countries where inflation had reached the extreme stage, as in Germany for example, civilisation survived. As there can be no question of a recurrence of extreme inflation in any country—circumstances are now totally different—any suggestion that inflation might result in revolution, anarchy, the destruction of the base of material welfare and of moral progress, is sheer nonsense."

* * *

It is the productive classes that will be favoured by inflation; and so long as influence rests, in the main, with them, is not inflation likely to prevent rather than cause revolution and anarchy? May not the lighting-conductor of inflation prove the saviour of modern Western civilisation? So far as Paul Einzig is concerned, the choice does not lie between inflating or not inflating but between regulating the inevitable process of inflation or allowing it to run loose after it has broken down our resistence. Shall we have inflation under control, thus minimising its adverse effects? Or are we to have inflation beyond our control, thus apt to do its very worst. Whether inflation is organised or uncontrolled it will provide, and it alone can provide, the much-needed solution of the world's economic deadlock. Old, crusty, conservative economics, still clinging to its fads against inflation, has had blow after blow dealt by one eminent economist after another. The authorities in India, with smug complacency, prefer to cling to the time-worn ideas as they have neither the imagination nor the courage, neither the freedom nor the initiative to inaugurate new and better policies in consonance with the new and changed conditions through which the world is passing. It is the fetish of exchange that has prevented India from doing what Australia had done or New Zealand has done. These Dominions have remained within the sterling area and yet have the vision and courage to take independent action of their own. It is by such action that Australia, whose finances were in serious disruption and whose credit sank very low only three years ago, has rehabilitated her finance and re-established her credit.

* * *

What Australia has done, India may and must do. But will India be allowed to follow what is obviously the only right and correct course? It will be the main task of Sir James Grigg to convince his masters in London that if he allowed himself to be but a tool in their hands, he can do nothing to improve the intrinsic strength and stability of Indian finance. India is in the same position as Australia or the United States of America. India must launch the same experiments that these two countries have undertaken, the one with success already assured and the other with success in prospect. In a number of ways, India, while remaining an important member of the sterling area, can yet adopt policies and initiate action in collaboration with America. Depreciation of currency, a reasonable dose of inflation, a greater status for silver in the monetary system—these are the objectives for which America and India can work in union. Action in these directions will not be and need not be inconsistent with this country being a member of the sterling group. This is a point about which Sir James should take a definite stand and a bold attitude. If he is content to follow a policy of drift, and to pursue the line of least resistence, in the facile faith that India will shake off her troubles when the world shakes off its trobules, Sir James will be missing one of the biggest opportunities that any Finance Member could have to achieve important and fruitful results both at home and in their repercussions on world economy.

* * *

While Paul Einzig has given great importance to a policy of universal devaluation as the prime consideration in the solution of world's economic difficulties, he recognises that monetary management and manipulations in themselves are incapable of averting the new crisis. He concludes by underlining the significance of scientific and comprehensive planning :

> "The problem will have to be tackled at its root, and, instead of attacking the symptoms, the responsible statesmen of mankind will have to penetrate into its foundation by organising production and distribution. It is only through the adoption of planned economy at least on a national scale, and if possible on an international scale, that the recurrence of crises of increased gravity might be prevented."

* * *

Indian Finance has been urging the imperative need of India formulating a definite national economic policy, and evolving a definite economic plan, at the same time setting up a supreme economic council to interpret that policy and work out that plan. Sir Arthur Salter was invited to make recommendations on the what and how of the establishment of economic councils in India. Sir Arthur's report is another of those numerous documents that are gathering dust in the pigeon-holes of the Secretariat. Sir James will do well to retrieve it from its oblivion and arrange for early and right action to be taken. Potentially India is one of the wealthiest countries in the world. Actually India is one of the poorest countries. The problem for any Finance Member who is really interested in national economy, is how to convert the potential wealth into kinetic wealth. It can be done. It should be done. Alike in the interests of Britain and India there should be no delay in this being done. Will Sir James do it?

* * *

The credit and ways and means problem, which comes last, might, however, come to engage his first attention. Sir James will, perhaps, take charge early in May. And immediately on his entering office, he would have to deal with the various issues connected with the conversion operations. The monsoon months are the time of the year when conditions are most favourable for the issue of rupee loans. 1933 was somewhat freakish as there were three loans in the first half of the calendar year. But the normal feature is to tap the Indian capital market for new loan in the slack season. The problem of conversion has been considerably lightened by the several operations put through, more or less successfully, by Sir George. Taking the conversion operations in this year and the following three years, the results of the 3½ per cent. 1947-50 loan of last April are of great significance. In the conversion section the results of the operations were as follows:

Particulars of Loans.	Amounts outstanding before the issue of this loan. Rs.	Amounts converted into this loan. Rs.	Balance outstanding after the close of the loan. Rs.
4½ per cent. Bonds, 1934 ...	25,98,05,600	12,97,54,800	13,00,50,800
5 per cent. Bonds, 1935 ...	12,83,14,900	1,39,75,200	11,43,39,700
6½ per cent. Treasury Bonds, 1935	16,94,65,600	84,45,800	16,10,19,800
Total ...	55,75,86,100	15,21,75,800	40,54,10,300

GODREJ

Prices Low - Quality High

Godrej gives you high quality steel equipment at low prices, because of scientific manufacturing on large scale. Godrej Work is the only works of its kind in India equipped with the latest costly machinery and engineering devices.

In addition to Rs. 40½ crores of the three bonds mentioned in the above table, the Government will have to tackle Rs. 19½ crores of the 4 per cent. 1934-37 loan. If the giltedge market is propitious, the conversion of this loan might be undertaken in the current year; otherwise there is time enough till 1937 for dealing with this loan. It may, therefore, be stated that between 1934 and 1937, that is, in four years, Sir James will have to arrange for the conversion of loans amounting to Rs. 60 crores. This works out to an average of Rs. 15 crores per year. The amount involved is by no means such as to cause any embarrassment. Moreover, confining our attention to 1934 and 1935, the capital programme either of the railways or other departments of the Government are not likely to necessitate the raising of any new money from the market. Such new money as might be required would be found by the excess of payments into the Railway Depreciation Fund over withdrawal from that Fund, as well as from increased receipts in Postal Saving Banks accounts, Postal Cash Certificates, etc. It may, therefore, be assumed that the New Loan programme for the next two years will be confined to conversion operations. This is a factor which is calculated to improve the intrinsic vitality and health of the giltedge market. Sir James should take the fullest advantage of this sound intrinsic position for putting through the conversions on a most favourable basis. We believe that something must be done in order to remove the lack of confidence that prevails in the giltedge market as a result of the blunders of the last Spring in connection with the 3½ per cent. Rupee Loan and the 4 per cent. sterling loan. The best way of re-establishing confidence is for the Finance Member to make a declaration that the amounts set apart from current revenue for the avoidance or reduction of debt should be used not for the avoidance of debt as is now the case, but for the reduction of debt as has been urged by us on repeated occasions. In simple terms, the Debt Redemption Fund should be used for the purchase of securities from the open market with a view to give support to Government of India stocks both in India and in London. It would not be possible for us to discuss, at full length, what we consider as essential factors in a sound and scientific credit policy. But suffice it to say that the intelligent utilisation of the Rs. 7 crores available from the Debt Redemption Fund would put heart into diffident investors and revitalise the giltedge market to such an extent as to enable the conversion operations of this year to be put through on a 3½ per cent. (net) basis.

THE INDIAN SALT INDUSTRY

Mr. R. Dhara writes :—

The Province of Bengal, Bihar and Orissa and Assam are unable owing to climatic reasons, to produce their own salt; they are obliged to meet their requirements by importing salt to the extent of about 5,00,000 tons per year. Out of these total imports :

> About 50,000 tons of special quality—for which there is a special demand—are imported from Liverpool and Hamburgh.
>
> The bulk of "4,50,000 tons were supplied by Aden, Djibouti, Mossawah, Port Said, Roumania Spain and Ras Hafun.

Imports from Aden have grown during the last 30 years from 40,000 tons per year to about 1,30,000 tons per year, and since the introduction of protection in 1931 to about 2,60,000 tons per year.

* * *

The Calcutta salt market has thus been practically controlled by foreign interests (with prices maintained at a high level). As a result, pointed attention was drawn to the necessity of establishing an indigenous industry with a view to making India self-supporting in the matter of salt and to stop a drain from India of over a crore of rupees per year, based upon Rs. 80 per 100 mds. (The average of 68 years 1862—1930 is as high as Rs. 80 per 100 mds.).

* * *

The Tariff Board who reported in June, 1930, found that the Indian Salt Industry, given adequate protection, could meet the whole of India's requirements.

* * *

The Salt Survey Committee, appointed by the Government of India in September, 1930, fully bore out—in their report issued in February, 1931, the Tariff Board's conclusion. The reports of the Tariff Board and the Salt Survey Committee were examined by the Salt Industry Committee of the Legislative Assembly in March, 1931, and their recommendation to impose an additional duty of Re. 0-4-6 per md. on foreign salt imports was accepted by the Legislative Assembly and the Salt (Additional Import Duty) Act XIV of 1931 was duly passed. The operation of this Act was limited to a period of 12 months only (up to 31st March, 1932), but even so it gave an impetus to the indigenous industry. When the position was again examined by the Salt Industry Committee in February, 1932, it was observed that the measure had been remarkably successful in stabilizing the price of white crushed salt at a level, which would encourage the substitution of Indian for foreign salt and without unduly burdening the consumer. On the recommendation of the Salt Industry Committee, 1932, the Salt Protection Act, 1931, was extended by the Assembly for another 12 months up to 31st March, 1933.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

The STANDARD LIFE
ASSURANCE COMPANY

1825

Head Office:
3, George Street,
Edinburgh.

London:
46, Que Victoria St., E.C.
A, Pall Mall, S. W. 1.4.

HEAD OFFICE FOR INDIA :
Standard Buildings, 32, Dalhousie Square, Calcutta.

The production from Indian Salt Works, thanks to Government protection, reflected upon Imports of Indian salt into Calcutta as follows:

1930-31	about	43,000 tons.
1931-32	„	98,479 „
1932-33	„	119,355 „

Imports from Aden on the other hand, increased by leaps and bounds, out of all proportion to the increase of output from sources in India, *viz.*—

1930-31	165,129 tons.
1931-32	279,054 „
1932-33	258,312 „

In view of this development, Indian salt interests, who by this time had invested large sums in their works, were trembling for their existence. More so, since during the second year of protection, foreign salt was thrown on the Indian market at prices tantamount to dumping with a view—no doubt—to crushing the infant Indian Salt Industry. While Government had provided a fair selling price of maximum Rs. 66 per hundred maunds, foreign interests sold at as low a figure as Rs. 38 ex-ship Calcutta, *i.e.*, below cost of production. It is obvious that the infant Indian Salt Industry cannot stand up for any length of time to this tremendous onslaught, for it has no reserves to fall back upon, being a new industry. On the other hand, foreign works have a record to their credit extending over a period of about 68 years (1862—1930), before the protection came into force, at prices *averaging Rs. 80* per 100 mds. No super-human efforts were, therefore, required on the part of foreign works to follow tactics as outlined above.

* * *

In March, 1933, the Salt Industry Committee again examined the question of extension of protection, where opposition was expressed by the representatives of the Governments of Bengal, Bihar and Orissa on the grounds that—

(*a*) the immediate result of the Government of India's policy has been to raise prices to consumers in their provinces substantially—their claim in fact being that without the additional import duty prices would have been lower by the exact amount of the duty;

(*b*) the possible advantages from a stabilised price in future years are nebulous and entirely uncertain and that in any case they would not outweigh the immediate disadvantage. They have argued, indeed, that stabilisation is not in itself desirable, for the consumers in their provinces have mostly to pay for their salt from prices realised for their agricultural produce, so that their ability to pay varies with these prices. At the present abnormally depressed level of prices of agricultural produce, they would prefer the immediate benefit of low prices for salt, whereas, when agricultural prices are high the necessity for paying higher prices for salt would not be felt as a burden. They are in fact prepared and would prefer to take the risk of fluctuations.

As regards (*a*) the Committee's findings are *not* in tune with the records of wholesale and retail prices ruling before and during the periods of protection, *viz.*:—

Year		Wholesale prices per 100 Maunds Calcutta Rs.	Retail price per Maund Calcutta Rs.
1919	...	173	4 0
1920	...	130	4 0
1921	...	113	4 0
1922	...	100	4 0
1923	...	80	4 7
1924	...	79	5 0
1925	...	58	4 5
1926	...	68	3 8
1927	...	104	3 8
1928	...	88	3 8
1929	...	66	3 8
1930	...	48	3 5
1931	...	56	3 1
1932	...	64	3 1

The above figures prove conclusively that the consumer is very little benefitted by lower wholesale prices. Further taking into consideration 1933 wholesale prices of about Rs. 45 per 100 mds., it can be stated that the Provinces that depend upon imported foreign salt, for nearly 70 years, never obtained salt so cheaply as they got it during the period of protection.

* * *

As regards (*b*) it must be borne in mind that wages form the principal item of expenditure in manufacturing salt in India and since the wage rate during the recent years has practically remained

INDIAN PETROLEUM PRODUCTS

the same, the cost of manufacture ex-Work has remained almost unchanged. This is moreover, borne out by the fact that Government themselves, in their own Salt Works, have not been able to actually reduce the cost of production. The position is different in cases of industries where the price of manufactured commodities is dependent upon raw materials and machinery.

* * *

The Salt Industry Committee, 1933, eventually recommended, and the Assembly accepted, further protection on a lower basis, *viz.*—

Duty Rs. 0-2-6 per maund.
Price level fixed at Rs. 54-12 per 100 mds.
Period from 1st April, 1933 to 31st March, 1934.

The main policy underlying the protective legislation was outlined in the Committee's report of March, 1931, as under :—

"The Committee accept the principle that it is desirable to make India independent of foreign salt, etc."

* * *

It is, therefore, difficult to understand why full protection against Aden should have been withheld by Government. Having regard to the enormously increased imports of Aden salt since 1931, it is quite clear that, if imports were allowed to continue unchecked, the Indian Salt Industry would have little scope for expansion. They would re-act most unfavourably upon sea-borne source on the mainland, such as for instance Karachi, where manufacture of salt has been started in right earnest and considerable sums have been invested already. The five existing Salt Works at Maurypur, Karachi, we understand already give permanent employment to about a thousand people, besides about 1500 daily wage earners. Last year's output of about 50,000 tons is expected to be about trebled during the current year and all this means a substantial income to Shipping Companies, the Port Trust, the Stevedores, lighterage Companies etc. It is assumed that, given adequate protection, Karachi's Salt Industry will produce 2,00,000 tons within the next three years, thus giving employment to many thousands more. For a Port like Karachi, lacking other industrial undertakings on a big scale, the local salt industry deserves the fullest support.

* * *

What is true of Karachi is, we understand, equally true of the other maritime salt manufacturing centres on the mainland, such as Okha, Morvi, Porbandar and Tuticorin, all of which have undertaken schemes of development calculated to increase their output very considerably. Besides these sources, some Companies have been formed in Bengal and Orissa with a view to establish salt manufacture on the sea-board of these provinces and some Works have already come into existence. These, quite as much as the Works on the West coast, require adequate protection during their infancy, to enable them to gain their feet and be able to stand against the onslaught of Aden.

* * *

We are convinced that the abnormal increase in imports from Aden constitutes a very real danger to the salt industry on the mainland, and that this industry is threatened with total and speedy extinction, if Aden is allowed to continue to enjoy the benefits of protection any further. As the Tariff Board and the Salt Industry Committee of the Legislative Assembly have admitted in specific terms, Aden never needed any protection, nor does she need any now. Protection has only resulted in fortifying her position very considerably, so much so, that she is now in a position to crush out the infant works on the mainland by the simple process of just a mild rate-cutting which would be quite enough to force the infant works on the mainland out of the market, and also out of existence.

What the indigenous salt industry of the country, by which we mean the industry on the mainland proper only, now requires most urgently is not only an adequate measure of protection for an adequate period but also, and this very emphatically, that Aden be definitely *excluded* from such protection scheme as may be sanctioned by the Legislature for the benefit of this national industry. We understand that the industry has approached the Legislature for the following measures

(1) that the next protection scheme be made to run for a definite period of not less than five years.

(2) that the rate of fair selling price be retained at its present figure of Rs. 54-12 per 100 maunds, which is the minimum economic figure for them.

(3) that the incidence of duty be restored to its former figure of 0-4-6, so that the indigenous works may not be compelled to lower their rates below the above minimum economic figure, and keep the foreigners out; and lastly

(4) that Aden be definitely excluded from the above scheme of protection as a most necessary measure of security to the Indian indigenous industry, being vitally necessary for thier very existence.

* * *

We trust that Government and the Central Legislature will give the needs of this infant industry their sympathetic consideration and afford the measure of protection that it claims against the serious menace from Aden.

(Continued from page 138).

the time to part with trained hands! Therefore let Mr. Colvin be granted an extension of office.

This week, Roy's Weekly has celebrated its first anniversary and it is very encouraging to find that the paper in the memory of a great journalist has created such a good impression that high officials and prominent leaders of public opinion have sent their messages of appreciation and good will. Among those who have done so are Sir Shanmukham Chetty, Sir B. L. Mitter, Sir R. N. Mookerjee, Sir George Schuster, Sir Frank Noyce, Sir Tej Bahadur Sapru and Sir Sikandar Hayat.

CAST IRON PIPES

for Water Schemes

Extract from "RANGOON GAZETTE" on the AKYAB WATER SUPPLY SCHEME, Dated 25-4-1933.

"The Completion of a work of this magnitude in so brief a time will be a creditable achievement, and if not indeed a record, certainly an exceptional accomplishment involving a considerable amount of organisation and hard work by all concerned. The BENGAL IRON CO. supplied the bulk of the pipes used in one consignment, chartering a special steamer to do so".

The Contract comprised:—1,760 Tons—Sizes 5″ to 20″ diam, including specials the bulk of which was shipped within ten days of the receipt of the order.

The laying was carried out by Messrs. Clark & Greig Limited of Rangoon.

I have often let myself into trouble by my proneness to promise the next instalment of a story in the "next issue". I have found, not on a few occasions, that something or other happens necessitating the discussion of an urgent development, so that the promised instalment does not appear according to programme. I have been sharply pulled up in this matter and curtly told that I should be more careful in making advance promises. I kept this warning in mind for a few weeks but, forgetting it in the abandon of dictation, find myself in the soup periodically every three months. Some such situation has arisen this month in connection with my undertaking, given in the issue of January 6, to expatiate on the three-fold responsibilities which lie on the State, the public and the legislators respectively in regard to the Reserve Bank. The next issue came but it did not contain any expatiation. Nor even expiation for the lack of the expatiation. Something more important than the Reserve Bank happened. Sir George Schuster, who is the author of the Reserve Bank Bill, is to be succeeded by Sir James Grigg who will be entrusted with the task of giving effect to the Reserve Bank scheme envisaged in the Bill. I have accordingly to begin to-day's gossip with an expression of my regret in not having kept my engagement and with a renewal of the promise that I would not promise any more in a light-hearted fashion.

* * *

Discussing the three-fold responsibilities, it is necessary, if to-day's story is to be self-contained, to recall the following passage from my observations in the issue of January 6:

> "The Reserve Bank scheme being what it is, it may be stated, in broad terms, that the success of the Bank will depend less on the actual scheme than on the fulfilment of three definite conditions which are:
>
> 1. On the side of the Government they should make the first appointments (in regard to the higher staff, the central board and local bodies) in a way that would inspire confidence in the public mind.
>
> 2. On the side of the public, the issue of shares, as and when made, should not be treated with apathy. It is up to our leaders to carry on a wide propaganda to instil in the minds of the population that everyone who can afford it must buy at least five shares of the Reserve Bank as a matter of national duty. It is only in this way that an effective guarantee can be had for the control of the Bank being placed on a basis free from the influence of any financial caucus or vested interests.
>
> 3. On the side of the legislators, the time has arrived when the principle of specialisation should be understood in its full significance. Popular representatives in a democratic body cannot be blamed if they feel at sea when detailed questions of financial or economic importance are under discussion. The best solution would be if, from amongst the non-official members, a small council of eight to twelve members could be formed, with a view to the members so selected devoting themselves to a special study of economic problems. It will be the duty of such a council to watch the working of the Reserve Bank and call the attention of the Assembly if and when the Reserve Bank functions in a way that is not in consonance with public interest".

* * *

So far as the higher staff of the Bank are concerned, there are four important appointments, namely, Governor, two Deputy Governors and Secretary and Treasurer. As I stated on a former occasion, the key to the success of the Bank lies in the right choice of the right man for the Governor. This is a matter on which the Government cannot afford to take any action which will arouse suspicion in the public mind. To the Finance Member and his colleagues who listened to the discussions on the Reserve Bank Bill in the Assembly, it would have been obvious that the one contingency against which every member wanted to provide was the exercise of undue influence by the Bank of England over India's central banking institution. It was for this reason that the utmost insistence was placed on the London branch of the Reserve Bank. If, therefore, the Governor-designate is one whom Indian opinion will believe to be under the dominating influence of the Bank of England, the Reserve Bank of India will commence business with a cloud of suspicion encircling it at the very start. We may be told that in a country like India where the bankers have had no occasion to have experience of the working of central banks or such international financial experience as will mark them as fit and competent to run a Reserve Bank, it would be obviously necessary to import foreign talent; and that while recourse to foreign talent is unavoidable, the safest course is to act on the advice and suggestion of the Bank of England authorities.

* * *

I am not amongst those who would be inclined to exaggerate the danger of the Bank of England having a due and proper say in such aspects of Indian finance as pertain to the London market. Nor am I disposed to believe that in any nomination which the Bank of England authorities might make for the Governor of the Reserve Bank of India they will be solely guided by the consideration that is alleged against them, namely, securing a powerful voice for themselves in the policy and working of the Indian institution. I would, therefore, consider that the proper course for India would be to apply for the assistance of the Governor of the Bank of England if we ourselves cannot make a good choice. I grant all this. *At the same time I should make it clear that recourse to the Bank of England would be necessary only if there were no suitable choice which we could ourselves make.*

Had there been no attempt made by Sir Basil Blackett to inaugurate the Reserve Bank seven years ago, we would have had to rely entirely on the Bank of England for the choice of a Governor for the Bank. As it is, Sir Basil was so keen on establishing a Reserve Bank that he appointed, betimes, the Governor-to-be of the Bank. When the Hilton Young Commission were sitting in London, Sir Basil took steps, in consultation with Indian representatives on the Commission, to interview suitable persons and decide on a final choice. Sir Osborne Sdith (then Mr. O. A. Smith) was in the Australian Commonwealth Bank. He was strongly recommended by the Rt. Hon'ble Norman. He was interviewed by a committee on which were members like Sir Purshottamdas Thakurdas and Sir Rajendra Nath Mookerjee. The committee were satisfied that the fittest person to be appointed as the Managing-Governor-Designate of the Reserve Bank of India was Mr. Smith. Mr. Smith was associated with a central banking institution. He had considerable experience of the London market. He was also acquainted with the American market. He negotiated the first Dollar Loan of Australia in New York. He was young, vigorous and well-informed and had a definite personality of his own. Recommended by Mr. Montagu Norman, approved of by the special committee, and finally appointed by the Government of India, Mr. Smith arrived in India in 1926 as the Managing-Governor-Designate of the Reserve Bank of India.

* * *

He spent a year touring all the important centres of India and getting himself acquainted with business conditions and with business leaders in this country. When the Reserve Bank Bill ended in a fiasco and when Sir Norcott Warren retired from the Imperial Bank, the Managing-Governor-Designate of the Reserve Bank, who had no Reserve Bank to take charge of, came in handy as the successor to Pat Warren. During the five years when Sir Osborne Smith has been Managing Governor of the Imperial Bank, he has brought in a new outlook and a fresh energy in the working of this institution. An important member of the Central Board of the Imperial Bank once told me that, on two critical occasions, the timely measures that Sir Osborne took were responsible for saving the Imperial Bank from losses which might have caused serious embarrassment to the institution. His stewardship of the Imperial Bank has been a resplendent record in every way. The Central Board, to a man, swear by him. In the developing of a new technique in regard to the various transactions of the Government that pertain to the money market, Sir Osborne has ably aided and assisted the Finance Department. He is the first really hundred per cent. banker that India has had.

* * *

When he came to India he had international experience, his speciality being intimate and personal knowledge of the markets of the Dominions, Britain and America. To this knowledge, he has now added a ripe and varied knowledge of Indian business and businessmen. He has shown grit, resourcefulness, correct judgment, real insight and independence of outlook. Here is a man possessing all the qualifications in just proportion and harmonious blend. When we can make a choice of our own here from within India, where is the need, I ask, for discussing any other name at all? I have reasons to think that in certain official circles, the independence which characterises Sir Osborne Smith is a quality which has not altogether been pleasing or acceptable. But, then, we have been told, again and again, that the purpose for which the Reserve Bank is created is that it should be independent of political and Governmental influence. If the essence of the Reserve Bank is its indepenence of influences of this nature, why should independence in the Managing Governor be a drawback? Thus viewed, the very independence of Sir Osborne should be considered the biggest asset of the Reserve Bank of India.

* * *

I have dwelt, in such detail, on the appointment of the Governor and on the necessity to choose Sir Osborne to this post, as our Government spokesmen, while paying lip service to the virture of independence, look for servility and pliability in their officials. In the course of the Assembly debate, Sir George Schuster considered the hypothetical claims of a number of British financiers. He mentioned the names of Sir Edward Cook, Sir Otto Nimeyer and Sir Henry Strakosch. I cannot understand why he deliberately omitted the name of Sir Osborne Smith. If he also shares the view that Sir Osborne is much too independent to be appointed the first Governor, all that I can say is that Sir George was not really serious when he spoke eloquently on the need to ensure the freedom of the Reserve Bank from political or other influence. If Sir Osborne was good enough in 1926, is he not all the better with the additional qualification of seven years' experience in India?

* * *

Then there is the question of the two Deputy Governors. I cannot, for the life of me, understand why there should be two Deputy Governors. The September draft of the Bill contained the provision for only one Deputy Governor. If there was to be only one deputy, it must have been clear that the Legislature would have insisted on the inclusion of a specific clause that, of the Governor and the Deputy Governor, at least one should be an Indian. As it was a foregone conclusion that the Governor was to be a non-Indian, the Government would have had to appoint an Indian as a Deputy Governor. Anticipating such a contingency, the authorities decided that it were best to have two Deputy Governors so that, of the three principal officers, two could be non-Indians. This change in the opinion of the Government took place after the introduction of the Bill in September and the meeting of the Select Committee in Ocober-November. On the side of the Select Committee members, a good many of them argued

that unless there were two Deputy Governors, they could not insist on the appointment of at least one Indian as a deputy. So, the situation was so wangled that the demand came from the Indian members for the increase in the number of Deputy Governors to two. The Indian members forgot or did not realise that if there were to be two deputies, the Indian deputy would be made the junior or given such a status as would ensure the non-Indian deputy becoming the next Governor after the retirement of the first Governor. It is, therefore, of the utmost importance that in the selection of the two deputies, special precaution should be taken in order to ensure the second Governorship of the Reserve Bank going to the Indian Deputy.

* * *

Mr. J. B. Taylor, who has won the approbation of every member of the Select Committee for efficient and enthusiastic discharge of work, is clearly earmarked for one of the Deputies. His experience as Controller of the Currency would be an invaluable asset. Unlike his predecessor, he has an open mind, eager to know all sides of the question and, while being well-informed, is receptive to new ideas. His appointment would be acceptable to all sections of opinion. As for the Indian deputy, the name that stands out is that of Sir Shanmukham Chetty. I have not the slightest hesitation in affirming that amongst our public men, Sir Shanmukham has the clearest understanding and most intimate acquaintance with problems of currency, exchange, budget and money market. He is a keen and careful student. He has been at pains to be abreast of all current developments in international finance. He is the one man who, selected as deputy, is sure to find his way direct to the Governorship when the next vacancy occurs.

* * *

As for the Secretaryship of the Bank, Sir George Schuster has done the most correct and graceful thing in appointing Sir Basil Blackett's pet, Mr. Aravumudha Ayangar. He is admittedly the most qualified Indian in regard to the theory of central banking and the practice of currency operations in India. He was the Secretary of the Hilton Young Currency Commission and won golden opinions from experts like the Rt. Hon'ble Hilton Young and Sir Henry Strakosch. He was associated with Sir Basil in the two-year discussions of the Reserve Bank in 1927-28 through all the stages of the introduction, the Select Committee and subsequent discussions in the Assembly. He was the Secretary of the Central Banking Enquiry Committee; Mr. Ayangar has had good experience of currency operations through his contact with the Controller of Currency's office. He knows the working of every department connected with finance. He has prepared two budgets.

* * *

The Bill in the form in which it has been passed provides that the Government should appoint all the directors of the Central Board and all the members of the five Local Bodies. I was definitely opposed to a provision of this nature. I have no faith in the powers of shareholders to elect directors, but even this shadow of the substance of election has been removed by an arrangement in which Government nominees will control the entire situation. Mr. Thampan had an amendment to the effect that a committee should be appointed by the Legislature for supervising the public issue of shares and the allotments; and that after the allotments had been made, the shareholders so created should proceed to appoint the members of the Local Bodies and the latter, in their turn, should proceed to appoint the members of the Central Board. The very significance of the proposal was not understood by the Assembly. The result is that the Government can do what they like in their absolute discretion. No solution for this state of affair is furnished by the grudging mercy shown by the authorities in agreeing to the reduction of the period for which the members of the first appointment shall hold office.

* * *

The Government have taken a tremendous responsibility on themselves because the public are bound to be extremely critical of the first nominations made by them. Sir George Schuster made much of the fact that the four nominees of the Government to the Central Board of the Imperial Bank have been Indians for a dozen years. But what kind of Indians have they been? They are acknowledged, admitted and well-known loyalists who believe that not only the King but the Indian Bureaucracy can do no wrong. I daresay, the Finance Member could pick up another fifty Indians who should have an equally touching faith in the infallibility of Bureaucracy. But if fifty such men be appointed to the first Central Board and Local Bodies, I can assure the Finance Member that no worse start could be given to the Reserve Bank.

* * *

I may now turn to the duty that lies on our leaders to enlighten the public as to the necessity of their taking up shares of the Reserve Bank as a matter of national duty. If the public are apathetic in this matter, the shrewd business communities in centres like Calcutta, Bombay, Rangoon, Madras and Cawnpore, who know how to manipulate votes and secure control, would apply for shares in their names as well as in the names of their relations, satellites, staff and assistants. It is obvious that this is a danger against which the public can take effective action only if every Indian who can afford it makes a point of subscribing for a minimum of five shares and of retaining the five shares whatever the premium to which the shares might rise.

* * *

I have also ventured to offer a suggestion to the members of the Central Legislature. I am urging a plea for a non-official economic council within our Assembly. I have already broached the subject to some of the members and the idea has been taken up enthusiastically.

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, January 15, 1934.

While the Bombay Government are at last in sight of a balanced budget, the Bombay Corporation has been confronted for the fifth time with a deficit budget. For the 5th year in succession, the Corporation is up against a shortage of revenue amounting to more than Rs. 20 lakhs. So late as 1927, its cash balances stood at 70 lakhs; and looking to the revised estimates of income and expenditure for the current year, it is expected that the closing balance at the end of the year will amount to Rs. 4,95,000. Though this shows a considerable improvement over the 1,85,000 originally estimated by the Corporation, it is clear that the end of the year, for which the budget estimates are now being formed, will find the Corporation at the end of its resources. The total expenditure for the year 1934-35 is estimated to be Rs. 336.58 lakhs as against 335.69 lakhs estimated for the current year showing an increase of only Rs. 89,000. On the other hand, the income, according to the estimates of the Municipal Commissioner, at the rates of taxation in force in the current year, would amount to Rs. 312.59 lakhs as against Rs. 314.57 lakhs budgetted for the current year, excluding the amount of Rs. 2,75,000 which represents the extraordinary receipt from the plant and machinery depreciation fund. Thus the total estimated revenue for the budget year is expected to show a nett decrease of about Rs. 2 lakhs. In arriving at this figure, adjustments have been made for the aggregate estimated increase of Rs. 7,62,000 due to increased sales of land, increased income from the general tax and water tax, as also the increase in the government contribution towards primary education owing to the reduced percentage cut and so on and an estimated decrease of 9,60,000 under almost all other sources of income. It will thus be seen that the finances of the Corporation have arrived at a crucial stage in which, with the absence of sound measures of reorganisation, the Corporation is sure to be overtaken by actual bankruptcy.

The Chairman of the Standing Finance Committee, in introducing the budget for the year 1934-35, took care to point out the chief causes of inflexibility in Bombay's Municipal finances. Like most other institutions and individuals in present day economy, the Bombay Corporation is also *staggering under a huge load of indebtedness.* Mr. J. Laljee, the Chairman of the Standing Committee, pointed out that "the most potent factor which has largely contributed to the deficit in the next year's budget, as also to the several deficits in the past, has been the high rate of interest and the increasing liability to provide for Sinking Fund on account of debts incurred in the past." The debts of the Corporation amount to as much as 70 crores and the annual debt charges require a provision of 1,35 lakhs, that is, 40 per cent of the total income leaving only 60 per cent to be utilised for the expenditure of civic amenities. The amalgamation of the Improvement Trust with the Corporation of Bombay has not by any means contributed to the strengthening of the financial position. For the Improvement Trust has about the same amount of indebtedness of its own as the Corporation. On the 17 2/5 crores of Improvement Trust debts, the Trust has to provide about 1 crore as annual debt charges and 96 per cent of its income and only 4 per cent of it is left for the Municipal Corporation to deal with. It will be seen from this that those to whom falls the unpleasant task of reconstructing the Municipal finances of the City have little scope of freedom of action and that their hope might lie only in some means of reducing the interest and other charges that are payable on the huge volume of indebtedness incurred by the Municipal Corporation and Improvement Trust. The Chairman of the Standing Finance Committee, in his speech on the budget, complained dolefully of the manner in which the Corporation has been deprived of certain sources of revenue to which it is legitimately entitled. So far as the local government are concerned, he said, "such sources of income as the transfer of property tax, the motor licence tax and a large part of the realisations from the entertainment tax in the city of Bombay under the petrol tax, which should come to us, are pocketted by them." Mr. Laljee went further and complained that the primary education provided by the Bombay Corporation has been availed of by people from all parts of India and that therefore it stands to reason that the expenditure incurred by the Corporation in this behalf should be contributed by the provincial and other governments. In fact, in the financial extremities to which the Corporation has been reduced, Mr. Laljee has been constrained to think that even in the matter of the maintenance of the roadways in Bombay, the Imperial Government ought considerably to lighten the burden of the Corporation's expenditure. "The Imperial Government," Mr. Laljee contends, "have not been as liberal and as considerate in financial help as they have been to Calcutta and other cities either towards Improvement Trust activities or towards Bombay Municipality development even though expenses regarding the construction and maintenance of magnificent wide road and good lighting resulting in the easy and convenient transport of large quantity of merchandise to and from the railway docks and customs are being borne by us and although the Imperial Government have been gathering crores of rupees in the shape of customs and railway revenues." It must also be said that the amalgamation of the Improvement Trust with the Bombay Municipality is another source of financial embarrassment to the latter. On account of the dissolution of the Improvement Trust Board and the transfer of their powers, duties, assets and liabilities to the Corporation with effect from 1st October, 1933, the Municipal contribution for the estimated deficit of the Improvement Trust schemes has gone to swell the figures of the Municipal deficit.

In such a position it is, indeed, idle to suggest that the restoration of budgetary balance can be sought through a scrutiny of the Municipality's expenditure on various kinds of civic amenities. It is quite true that, taking the various items of expenditure such as public health, primary education, and the like, it would be possible to show a very considerable increase during a short period of years. But considering that the amenities enjoyed by the citizens of Bombay are still very much below the level of any first-rate city in the advanced countries, it has to be admitted that relief should be sought through attempts to clear up the financial mess. There have been, during the last few months, more than one attempt to suggest that wastefull expenditure is being incurred through such institutions as the Schools Committee and that a resolute attempt ought to be made to stop such leakages. Constitutionally speaking, the position of the Schools Com-

By Air Mail

GREAT BRITAIN

The New Year has reared its crop of optimistic forecasts. For once since the palmy days of 1929, the eyes of the business world are turned upwards towards increasing prosperity, instead of looking down into still lower depths of the depression. Whatever may be said of 1933, it has, beyond doubt, enabled the seeds of hope to germinate ; and though there are still fears that untoward developments might rise here and there like weeds, there is a confident expectation that hope would sprout into some tangible progress in economic affairs. Britain is, perhaps, the only country where the experiences of 1933 are, even objectively, a reasonable ground for hope. She could claim that, if she has neared the fringes of the wood, it was because of patient plodding and not of any sensational plans as President Roosevelt is providing America with, in goodly number. The year-end, therefore, finds British businessmen in good cheer. Lt.-Col. John Colville, Secretary of the Department of Overseas trade, states in a New Year message: "I consider that the outlook for British trade is better to-day than it has been for some time. Even the worst years have brought their opportunities. 1934, which promises to be an improvement upon its immediate predecessor, will find Britain's industries alert to make use of improved conditions". "To-day," says the Prime Minister, "we say good-bye to the old year and turn to face a new one. The last twelve months, despite their difficulties and anxieties, have nevertheless been a time of steadily increasing hope. They have brought us in this country tangible proof that we are travelling on the right road and that our efforts are begining to receive their reward.

"We should look forward, therefore, to the New Year with renewed confidence and with the determination that it shall carry us still further toward the accomplishment of the tasks which confront us. It is my sincere hope that it will bring to all who may read this message a full share of personal wellbeing and happiness."

Sir George Behamell, Managing Director of the Dunlop Rubber Company and ex-President of the Federation of British Industries writes:

> "We have travelled a long road, mainly uphill, but the steadiness of this great nation is prevailing. Adversity invariably brings out the resources of the nation's character, and Great Britain is winning through by the sheer character of her people. In the belief that better times are at hand, I greet the New Year."

The President of the Building Society anticipates in the New Year as great a volume of building activity as ever before. The Directors of the Co-operative Wholesale Society also confirm the indications of the general improvement in trade.

Looking back over the principal developments of 1933, improvement is discernible mostly in respect of such indices of business activity as new capital issues, unemployment figures, clearing house returns, state of shipping, railway traffic, revenue returns.

New capital issues in 1933 amounted to £132,869,000, against £113,038,000 in 1932, and were the largest since 1930, when the total was £236,160,000. The 1933 total is, however, a long way from normal. The peak in recent years was £384,211,000 in 1920. The 1928 total was £362,519,000.

The December total was £6,353,000, compared with £12,787,000 in November and £4,312,000 for December, 1932.

Issues, by months, since, 1931, are shown in the following table:—

	1933	1932	1931
	£	£	£
January ...	8,310,263	2,895,798	12,332,412
February ...	7,167,385	11,994,734	19,606,243
March ...	13,447,603	12,104,130	13,446,859
April ...	8,247,859	18,013,115	1,687,195
May ...	14,614,014	12,296,311	11,009,880
June ...	17,541,251	17,467,795	12,832,397
July ...	6,001,777	3,312,507	5,184,993
August ...	21,208,047	72,500	1,666,492
September ...	7,164,097	17,000	1,315,308
October ...	10,026,260	19,745,198	2,482,875
November ...	12,786,859	10,807,078	4,409,179
December ...	6,353,481	4,312,163	2,692,359
Year ...	132,868,896	113,038,329	88,666,192

Equally encouraging is the small increase of £25.6 million or 0.07 per cent in the grand total of bills cheques, etc, paid at the bankers clearing house during the past year, which reflect to some extent the increased activity on the stock exchange. It must be remembered that the turnover for each of the three previous years 1930-32 showed a decline compared with the year before; and the increase in the grand total is an unmistakable sign of the stimulation of business activity. There is, no, doubt, a decrease in general clearings; but it is accompanied by a substantial increase in county cheque clearings and metropolitan clearings are also higher. Town clearings show a decrease of £119.15 million. Though one could wish that there were no such decrease, it is necessary to note that the town clearing cannot be accepted as an index of trade conditions, since a very large percentage of the turnover is the outcome of purely financial transactions. The metropolitan clearings showed an increase of £46.2 million and the increase was contributed by all the four quarters of the year, the third quarter providing the most. The greatest satisfaction can be derived from the recovery made in the county clearing which is influenced to a greater extent by the state of trade in the country than either the town or the metropolitan clearing.

In British ship building, too, which has, perhaps, the least bright outlook among British industries, the past year showed an inprovement over 1932. In saying this it is necessary to utter a warning against being taken in by the very exaggerated reports that appeared in the press about the change in the conditions of ship-building. The last year, on which the position could be regarded as having been normal, was 1929 when the position was so balanced that there was regular and smooth working and consequently most economical operation. At present, the total output of mercantile tonnage from British shipyards as represented by launches during the whole of 1933 was only 100,000 tons half of the 1932 total and 1/5th of the 1929 total. But it is significant that towards the end of the year there was an influx of enquiries which are clearly not of the price testing type but which are the enquiries which precede from business propositions.

The state of employment is, of course, the most reliable clue to the changes in business conditions. That unemployment was reduced by 678,986 between January 23 and December 18, 1933 is a circumstance the significance of which no one can miss.

Great Britain had 2,903,065 registered unemployed—a high record—at the time of the first return for 1933 (January 23). The last return for the year, made up at December 18 shows that that total has been reduced by 678,986, to 2,224,079.

With the exception of a slight setback in June-July, 1933 has witnessed a steady, and in some months spectacular, decline in the numbers of unemployed and the total now stands at the lowest level since the summer of 1930.

At December 18, 1933, the number of unemployed persons on the registers of Employment

Air Mail Week

Exchanges in Great Britain was 2,224,079—1,830,977 wholly unemployed, 308,821 temporarily stopped, and 84,281 normally in casual employment. This was 55,938 less than the number on the registers at November 20, 1933, and 499,208 less than on December 19, 1932. The total on December 18, 1933, comprised 1,871,196 men 43,107 boyes, 280,489 women, and 29,287 girls.

Figures are given below which indicate the changes in the numbers of insured persons unemployed at December 18, 1933, as compared with a year before, in the industries which showed the most marked changes :—

UNITED STATES OF AMERICA

ROOSEVELT'S MESSAGE TO CONGRESS

Despite the tremendous potentialities of the American situation for both good and evil, thanks to the experiments of Mr. Roosevelt, the atmosphere of New Year cheer was all pervasive. The weakness of the dollar towards the end of the old year gave renewed support to the stock exchange which was further encouraged by the strength of wheat and the firmness of Chicago cotton. It is generally recognised that it is too much to hope for the prices of last summer. It is also feared in some quarters that the session of the Congress now begun might account for a great deal of legislation of momentous significance to the conduct of business. Despite all this, the feeling is strong that during 1934 business must broaden out, the federal revenues expand and the general optimism more than sustained. The National City Bank of New York points out in its *Review* for January that "it is a notable feature in the situation that neither the controversies set going by the economic policies of the Government, nor the decline in trade and industry since July have materially weakened the general belief that business is on the road out of the depression. The economic policies are new in the experience of businessmen and are in certain respects the objects of criticism by economists and business leaders. The continued inability of industry to obtain capital to new security offerings which interferes with the planning of new enterprise and with replacement undertakings, that would require new finance, is an obvious handicap upon expansion. But even among those who feel uncertainty in these particulars, the belief that long time trend is upward has sustained confidence."

There would perhaps have been more speculation in the American press about the prospects of the New Year but that the meeting of the seventy-third Congress of the United States absorbs the whole of public attention. It is natural that very much more than the usual interest should attach to this session of Congress as it opens with President Roosevelt's message to Congress on the state of the Union and the results of his recovery experiments and would be primarily concerned with the extraordinary budgetary position resulting from the large schemes of Government expenditure on recovery. Both are calculated to raise fears and passionate controversies; and an animated session of Congress with far-reaching effects on American and world trade is expected on all hands.

The President's message to Congress is naturally scrutinised all over the world with critical care; and the feelings evoked by these utterances are determined by the attitude with which one had regarded President Roosevelt's economic policy in the past few months. But it should be obvious to the meanest intelligence that in the present stage of the recovery experiment, as we can judge it from various indices available, it is too much to expect President Roosevelt to say anything definite either about the results of the past or, much less, about his actions in the immediate future. Most people, especially of the outside world, are apt to read between the lines of President Roosevelt's statement to scan any indication of his economic or monetary policy. They would welcome a confession of comparative failure in the past, or an indication of the abandonment of the previous policy in some material respect or other, especially in the matter of making an unstable dollar the basis of monetary policy in America. Surely, it cannot be part of President Roosevelt's state policy to oblige inquisitive foreigners with details of this nature. The purpose of a Presidential message to Congress, as, for instance, of the King's Speech in the British Parliament, is to outline the executive the British Parliament, is to outline the lines of future policy where necessary and to make a bid in behalf of the executive for the spirit of co-operation which any legislature should offer, without detriment to its right and duty to exercise a wholesome check on the vagaries of the men in power.

Considered from this standpoint one can have nothing to complain against President Roosevelt's statement. When he says, "we have ploughed the furrow and planted good seeds, the hard beginning is over", few can take exception to such a description of the past. It must be said to the credit of President Roosevelt that he has not given room for

any false hopes of early stabilisation which foreigners would certainly like to have cherished. He urged his claim in behalf of his gold programme that "it has been formulated with a two-fold purpose of strengthening the whole financial structure and of arriving eventually at a medium of exchange which will have over the years a less variable purchasing and debt paying power for our people." As for stabilisation, President Roosevelt contended that "careful investigation and constant study proves that in the matter of foreign exchanges, certain of our sister nations find themselves handicapped by internal and other conditions and that they feel unable at present to enter into stabilisation discussions based on permanent world-wide objectives". One might, perhaps, question the accuracy of President Roosevelt's statement as to the inability of foreign nations to discuss measures for stabilisation. But there is no mistaking the intention of President Roosevelt that America will not take the initiative on this question for some time to come. This splash of cold water on the hopes of early stabilisation should by itself suffice to assure President Roosevelt of the most unfavourable reception of his message to Congress in countries like Great Britain and France.

As regards internal reconstruction, it is evident from the President's statement that he is determined to continue his drive against "those reckless speculators with their own or other people's money whose operations have injured the values of farmers' crops and the savings of the poor".

Those, who believe that the monetary troubles of which President Roosevelt's unstable dollar are in part an indication, and in part, a cause, are but a transitory phase and that the more permanent concern of world trade and economy is the future of President Roosevelt's Recovery Programme; observations on this question are very encouraging :—

"Now we are definitely in the process of recovery, lines have been rightly drawn between those to whom recovery means a return to old methods—the number of these people is small—and those for whom recovery means the reform of many old methods and the permanent readjustment of ways of thinking, and therefore of many of our social and economic arrangements.

"Civilisation cannot go back. We have undertaken many new methods, which it is our task to perfect and improve and to alter when necessary—but in all cases we must go forward.

"In the past few months, we have demanded from many citizens that they surrender many licences to do as they please in their business relationships, but we have asked this in exchange for the protection which the State can give against exploitation by their fellow men or by combinations of their fellow men. The credit of the Government has been fortified by drastic reductions in the cost of its permanent agencies through the Economy Act."

Though many of the ideas expressed in the foregoing are already familiar to us, it is necessary to note that as a result of the President's statement one has to regard his economic policy with a new orientation. Hitherto we had believed that President Roosevelt's main purpose is to stimulate recovery of trade and economy, and that if radical measures of economic reform had been adopted, it was less on account of their own intrinsic desirability than out of recognition that without them the wheels of industry and trade could not be set on the move. But the message to Congress makes it clear that the economic reorganisation which has been attempted during these months is more an end in itself than a means to the stimulation of business activity. And this is clear from the concluding remarks of President Roosevelt as also from the observations he had to make on the question of unemployment relief. Speaking on the relief of unemployment, President Roosevelt said "I have recognised the dangers inherent in the direct giving of relief and I have sought

the means to provide not mere relief but the opportunities for useful remunerative work. We shall in the process of recovery seek to move as rapidly as possible from direct relief to publicly supported work and from there to the rapid restoration of private employment". "It is to the credit of the American people," says the President, "that this tremendous readjustment of national life is being accomplished peacefully, without serious dislocation with only minimum injustice and a great willing spirit of co-operation throughout the country. Viewed in the large, it is designed to save from destruction and keep for the future the genuinely important values created by modern society".

It is this anxiety to cut out the dead wood and to keep the young saplings that is at the basis of the whole Recovery Programme. President Roosevelt continued: "The vicious and wasteful parts of that society we could not save if we wished; they have chosen the way of self-destruction. We would save useful, mechanical invention, machine production, industrial efficiency, modern means of communication, and broad education.

"We would save and encourage the slowly growing impulse among consumers to enter the industrial market place equipped with a sufficient organisation to insist on fair prices and honest sales, but unnecessary expansion of industrial plants, waste of natural sources, exploitation of consumers of natural monopolies, accumulation of stagnant surpluses, child labour, and the ruthless exploitation of all labour, encouragement of speculation with other people's money—these were consumed in fires which they themselves kindled.

"We must make sure that as we construct our life, there will be no soil wherein such weeds can grow again."

Is this, after all, at the root of much of the adverse comment both in and outside America?

FRANCE

NEW LOAN AND FOREIGN TRADE POLICY

The vote of confidence passed by the French Legislature in the Chautemps Ministry and the passage of the Finance Bill, have given an added hope to the new Premier who has confidently marched forward to put the financial structure of France in order. The French Treasury has evidently been closely watching the conversion operations on the other side of the Channel and has been eager to bring about a similar reduction in the nation's floating debt. The first signs of the stability of the new ministry have, therefore, promptly been taken advantage of to float the new 10,000 million franc, 5 per cent. Treasury Loan, the first slices of which have already been opened for subscription at 97½. The interest is payable half-yearly and the investors are given the choice of Five Year Bonds repayable at par, Ten Year Bonds repayable at 105 and Fifteen Year Bonds repayable at 110. The new loan, as the Premier is reported to have said, is only the logical outcome of the government's efforts to balance its budget and, though no detailed reports are available at the time of writing, regarding the reception of this loan, the good results that have already been achieved by the passing of the Retrenchment Budget, create the confidence that the loan is bound to be a success.

The New Year Attempts at Trade Revival

Consistent with these endeavours to balance the budget, and stabilise the exchanges, attempts are also being made to expand the foreign trade of the country. The export trade of France has for some years past given cause for anxiety.

It will be noted that there has been a steady decline in the exports in excess of the decline in imports. Thus France is faced with an adverse balance of trade, which is not very much better than the position just after the war. The economic consequences of this adverse balance have become more grave due to the abnormality of the trade conditions all over the world; for, while in normal times the invisible exports form a considerable part of the nation's balance of payments in abnormal periods this item is practically wiped out. The figures published in the *Revue d'Economic Politique* are significant in this connection. The tourist expenditure sank from 8,500 millions francs in 1929 to 3000 million francs in 1932, freight profits from over 3000 millions to 300 millions and interest dividends from 5000 to 1500 million francs. M. Louvent Eyuac, the Minister of Commerce, has stated the case in a clear position. The balance of accounts, he said, is adverse, because the domestic price level is much above the world price level and because invisible exports have shrunk both on that account and because all sorts of restrictions have been placed on transfer of funds.

The only way open to the Ministry at this juncture is to protect the home markets from foreign competition. While this is usually achieved by means of Tariff walls, this is not always possible, especially in the face of the bilateral commercial treaties and most favoured nation treatments. The French Ministry have, therefore, tackled the problem by the adoption of the quota system under which the exact quantity of each commodity to be imported from each country is to be fixed by agreement supplemented, wherever possible, by exchange surtaxes. Attempts are also being made to nullify the most favoured nation agreements; and it appears that they have also been successful to some extent.

This bargaining technique, which is the keynote of the New Year Economic Policy, has also its limitations as many political considerations enter to obstruct the free play of this higgle-haggle process. In principle, the present quotas are liable to a reduction up to a percentage of 75, should no concessions be forthcoming from the other countries; and France depends on her ability to force her neighbours to grant facilities of French imports under threat of of seeing their reciprocal facilities for exports into

France cut down. How far France will be able to pursue her intentions remains to be seen.

A gesture to keep the United Kingdom in a friendly and bargaining mood has already been made by the removal of the exchange surtax of 15 per cent. on British imports. Following this, the French Ministry is contemplating a reduction of 10 per cent. in the total imports of coal. It will be remembered that the coal quota was reduced by 10 per cent. last month ; import licenses for January have already been issued and the new threat of a further reduction of a 10 per cent. can take effect only from February. If enforced, it would reduce the present 47.7 per cent. quota to 42.93 per cent., thus dealing a heavy blow to the British export trade, the estimated loss being in the neighbourhood of 120,000 tons of coal monthly. This has naturally drawn a volley of protests from the English exporters. At a meeting of the Quotas Committee of the Federation of British Industries, a grave view was taken regarding the injury that would be inflicted by the new French Import Quotas ; and the question of taking retaliatory measures, it is understood, was also discussed.

The U.S. has also expressed disapproval at the new quotas and the American Embassy, it is learnt, will make a strong protest to the Ministry of Foreign Affairs. While America has as yet no power to lower her Tariff walls to admit of more imports from France, a preliminary bargain has been made between American apples and pears on the one side and the french wines on the other.

France has taken the strongest attitude towards her eastern neighbour, Germany, and has notified that, pending the undertaking to readjust commercial relations so as to reduce the present considerable excess of exports to cover imports from France, the grip of the quotas will be tightened. Considering the working of the stand-still agreement and the already existing protests regarding reduction of the last payment to 30 per cent., it is quite probable that Germany may not like to lessen her export surplus, upon which rest her calculations of repayment of her foreign obligations.

reported, contemplating stout resistance to the President in this regard and they argue that the gold belongs to the member banks who would have owned them but for the establishment of the reserve system and that therefore the Government should feel more than ordinary compunction in laying its hands on such stocks of gold. Most people who take up this line of criticism have, it must be said, acquiesced in President Roosevelt's drive against hoarding and his success in reclaiming from private hoards the gold that had been withdrawn during the time of the banking crisis. How do private banks stand in a different relation to the State in respect of their gold hoardings? After all, when the value of gold in terms of the national currency is so largely a matter of the political authority of society, and when changes in the value of the currency are avowedly and demonstrably in the interests of the nation as a whole, there can be no possible argument for leaving certain groups of private individuals in possession of values which, by themselves, they could have done nothing to create. So far as the foreign relations are concerned, it is certain that the right of the State to acquire all private gold, such as it is in the country now, would not make a difference in President Roosevelt's capacity to bring about a stabilisation agreement.

(*Continued from page 129*).

mittee must be admitted to be somewhat anomalous. The power of the Standing Finance Committee to scrutinise the demands of the Schools Committee and to bring it more in relation with the general financial position of the Corporation as a whole leaves much to be desired; and during this session of the Corporation resolutions have been brought forth to bring the Schools Committee under the direction of the Standing Finance Committee. Though the change might be well acquiesced in on administrative grounds, there must be a resolute resistance on the part of the citizens of Bombay to every attempt to cut down the expenditure on primary education which, probably, is at the back of the minds of those who have suggested this change.

As observed earlier, the tremendous disproportion between expenditure and civic amenities and the service of past indebtedness must be corrected, in so far as it may be possible, without further delay and suggestions are appearing in the press that, in as much as the financial embarrassments of both the Improvement Trust and the Municipal Corporation might be attributed directly to the ventures of these two institutions in the purchase and dealings in lands during the boom period, the relief from the present position must also come through the adoption of more businesslike methods of disposing of such land. The Improvement Trust has, as a result of its amalgamation with the Municipality, burdened the latter with an area of no less than 10,764,200 square yards of land in addition to what the Municipality had already on its hands. Of this, 1,540,000 sq. yds. are ready for development, 1,774,200 yds are temporarily released and in the background is an area of 7,450,000 sq. yds. which is yet to be developed. There is on this account a running debt of 16.69 crores for which the average rate of interest paid is 5.24 per cent. The land was bought at nearly 3 times the present price during the boom period and the debt represents a mass of shrunken values. At the present time when the weight of indebtedness is bearing so heavily on the revenues of the Corporation and when there is no hope whatsoever of land prices regaining the levels at which the Corporation effected its purchases, it is ordinary commonsense and prudence to push the sales of these lands as quickly as possible so that there could be a general clearing up of the mess. As a matter of fact, the sales of Municipal lands during the year 1931-32 totalled 30,758 sq. yds. of which one single transaction accounted for as much as 19,413 sq. yds. That the authorities have not made the best of the position is seen from the fact that, while over 150,000 applications and enquiries were received, there were actually only 22 sale transactions. The total price realised was Rs. 2,40,000 and the sales for the year 1930-31 were even more disappointing amounting to only about Rs. 56,000. It is obvious from this that, before the finances of the Corporation could be put on a sound basis, the authorities should attempt to make the best of the bad bargain they had made in respect of these lands.

FAMILY INCOME POLICIES

During the early history of life assurance it was the Whole Life policy that was most popular with the people. In fact Endowment assurance was practically unknown until the latter half of the nineteenth century. After the endowment assurance was introduced by life offices, gradually it found more and more favour with the insuring public and whole life policies were begun to be neglected except for fulfilling specific purposes. The growth of endowment assurance during the current century was so phenomenal that a few years ago, endowment assurance policies in the books of almost all life offices in United Kingdom accounted for 80 to 85 per cent. of the total amount of policies of each of them. Whole Life and all other special classes of policies amounted to 15 to 20 per cent. only. The most important reason that can be adduced for this wide popularity of endowment assurances is that they offered a splendid form of investment besides covering the risk on the life assured. When the income-tax rebate (which in England is half of a very heavy tax of about 25 per cent of the income) is taken into accounts, the final return on maturity, of endowment assurances gave an interest yield of 3 to 4½ per cent. compound interest on all the premiums paid. This was indeed very attractive and avoided all the speculation and other difficulties attendant upon other forms of investment, which after all did not give a much higher yield. Besides in case of earlier deaths before maturity, the families of the lives assured were fully protected. Whole life policies were taken only in cases of necessity as in the cases of providing for estate duties and providing a security for loans.

Though much may be said in favour of endowment assurances, there can be no doubt that no form of assurance can provide so much for the family and dependants of the life assured, as whole Life policies in some form or other. Endowment assurances provide this benefit in the few cases of deaths before maturity and they also provide the old age provision of the lives assured. Besides whole life assurances are much cheaper and a larger sum can be provided for, to the dependants under this plan. The public, however, did not much realise the advantages of a Whole Life Policy and the sacred object of life assurance was being fulfilled only in part by thtir taking up the endowment policy. It is only three or four years ago that a new scheme of whole life policy has been introduced first in the Continent and later in the United Kingdom. This scheme known as the "Family Income" or "Family Protection" policies has found much favour both among the insuring public and the life offices. It may even be said that this plan of policy has taken up the public by storm and to-day it is widely popular in England and the Continent. Almost all life offices have introduced this scheme with slight variations in the terms and conditions of the policy.

It has long been recognised that some form of policy providing an annual income for dependants besides the lump sum assured was a longfelt want of modern life assurance. It is true that most of the companies agreed to pay the sum assured in annual instalments if so desired, but this was not much effective in preventing the widow and the dependants from frittering away, or from being duped of, the lump sum assured, in cases of the early death of the bread winner. When the Family Income policy provided regular annual income ranging from one-sixth to one-tenth the sum assured to the family and the dependants in cases of early deaths of the policy-holder (*i.e.* within twenty years of effecting the assurance), it supplied a real want to the insuring public and it came into popularity with a rush. Besides this regular annual income from the time of the death of the policy-holder upto the completion of 20 years of the duration of the policy, the policy provides the payment of the full sum assured again at the end of 20 years. The idea underlying this new scheme took the fancy of life assurance men to such a great extent that people who once hated whole life assurance, became great enthusiasts and ardent advocates of this super,whole life scheme of policy. The fact is that dependants need an income, and it is the duty of life offices to provide it to their clients particularly in these days when investment even by experts is a difficult problem. It is no wonder then that Family Income policies are so widely popular in U. K.

In essence, family protection policies are only Whole Life or Whole Life Limited payments policies with the additional benefit of securing a regular annual income ranging from one-sixth to one-tenth the sum assured to the dependants of the life assured from the time of death of the life assured upto the lapse of 20 years from the commencement of the policy. If the life assured dies after 20 years, only the sum assured is payable without any annual income as it is supposed that the dependants would then be well advanced in age to utilise the sum assured in the proper way. The premiums charged are slightly heavier than the corresponding whole life or the whole Life Limited payments premiums, the excess premium being utilised to provide the additional annual income benefits in some cases. However the premiums charged are comparatively lower than endowment assurances and provide much greater advantages to the dependants of the life assured than the endowment policies. Though the principle involved in this class of policies is the same, there are different kinds of these policies with slight variations in the nature of and benefits conferred by them. In all these classes of policies the income benefits are given only for the first twenty years of assurance and the amount of income given varies with different offices from one-sixth to one-tenth the sum assured (the premiums charged being proportionately fixed). Most of these policies are either whole life or whole life limited payments kinds but some offices reduce the premiums payable after 20 years (*i.e.* after their liability to pay income benefits ceases). Few offices have also introduced "Endowment family income policies for which the premiums will be much more heavy. Again there are differences in the practice of paying the sum assured, in case of death within 20 years. Most offices pay the sum assured only after 20 years *i.e.* after the income payments cease, but few pay the sum assured in full at the time of death and then continue payment of annual income till the prescribed period; while few others pay part of the sum assured at the time of death of the life assured and the other part after the income payments cease. Except for these slight variations in the conditions and nature of the policies. the main principle involved in them is the same, namely, providing an annual income to the dependants upto a fixed period in case of early deaths of the policyholders besides paying the full sum assured.

Recently some of the Indian life offices also have introduced this family protection policy to the Indian Insuring public but it does not appear that this very useful plan of policy has met with the same phenomenal success which it met in United Kingdom and the Continent of Europe. The Deshbandhu Policy of the Hindusthan Co-operative Insurance Society of Calcutta is an adaptation of the family protection policy. The nature of the original plan is the whole life premiums ceasing at age 60 with the additional income benefit of one-tenth the sum assured every year (in 12 monthly payments) if the life assured dies within the first 20 years of assurance and payable throughout the remaining period of twenty years. Besides the full sum assured is also payable at the end of 20 years. This plan is offered both under the with profit and witdout profit scheme and in case of the with profit scheme if the policyholder dies within the first 20 years, the accrued bonus is payable immediately after death along with the first instalment of the income benefit. If however the policyholder dies after the lapse of 20 years, the full sum assured and the bonus are immediately payable without any income benefit, as it is supposed that the dependants would be sufficiently aged enough not to need the income benefit. The immense advantages offered under this plan are more than worth the comparatively little excess premium charged over the ordinary whole life limited plan. The "Family Security Assurance" of the Empire of India Life Office is also an adaptation of the family protection policies. Here the original plan is whole life premiums limited to 15 to 35 payments (rates being quoted for addition of every 5 payments from 15). The income benefit is offered if the policyholder dies within the first 20 years of assurance and payable for the remaining period in the 20 years. The annual income offered is 12 per cent. of the sum assured (in 12 equal monthly instalments). If death occurs within first 20 years, one-tenth the sum assurred and the accrued profits are immediately payable, a regular annual income of 12 per cent. of the sum assured is payable for the balance of 20 years and at the end of years the remaining nine-tenths of the sum assured will be payable. In case of death after the lapse of 20 years only the sum assured and the accrued profits are payable immediately. It appears that the Oriental Life Office and a few other companies have also introduced similar family protection policies. There can be no denying the fact that this is a most useful and cheap form of policy and deserves to be considered more by the Indian insuring public than it has so far been considered.

LAW AND PRACTICE OF LIFE ASSURANCE AND PROVIDENT INSURANCE IN INDIA

We have received a copy of the book "Law and Practice of Life Assurance and Provident Insurance in India," written by Mr. Taradas Dutt, an advocate of the Calcutta High Court. Though the birth of life assurance in India may be said to have dated back to a century ago, it is only a few decades ago that life assurance in India has begun to show any appreciable growth. Even now the development of this business in India is far behind that of many of the Western countries. It is no wonder then that authoritative books on the Life Assurance Practice and Law in India, are scarce. We have been following the English law and practice on the subject from a long time past. Though in principle insurance laws are practically the same everywhere, there are wide differences in the practical applications of these in the Indian law courts. The appearance of this book dealing with the Indian aspects of life assurance and provident assurance laws, will be welcome as one of the few contributions on the subject.

The book has got an added interest as it also deals with the law and practice of Provident Insurance in India particularly at a time when many new provident insurance societies are being established year after year. Provident insurance is distinct from life insurance, and the societies transacting this class of business insure the payment of small sums on births, marriages, deaths, etc. At the end of the year 1931 there were 265 societies transacting provident insurance business in India either on the dividing plan or on the call system. The second part of the book gives the provisions of the Provident Insurance Societies Act of 1912 with annotations. The scope and object of the Act and the various rules in the conduct of this class of business are stated clearly. The rules made under Section 24 of the Act of 1912 by the various local Governments to carry out the purposes of the Act are also given.

The first part of the book is devoted to life insurance. It gives valuable informations on the principles and practice of life assurance together with the various legal aspects involved in the conduct of this business. The facts supplied are written in simple English and arranged cogently in different chapters. The classification of life assurance companies and the applicability of the Indian Life Assurance Companies' Act and the Indian Companies' Act to them are given. The contract of life insurance, and the insurable interest required to support it are explained clearly. The receipt of premium, the issue of the policy, the various policy conditions and their legal implications receive due attention. Life assurance claims with the numerous legal technicalities that are to be complied with before the claim is paid, are dealt with elaborately. One chapter is devoted to the transfer and assignment of policies. The law of agency so far as it applies to insurance business is also dealt with. Rules regulating the conduct of life assurance by foreign companies in India are stated. The Indian Life Assurance Companies' Act of 1912 is given with brief annotations.

The book is replete with all necessary information regarding Life and Provident Insurance and will prove to be a useful guide both to the insurance businessman and the lawyer. It is priced Rs. 8.

OLYMPUS

New Delhi, January, 15.

Every one rubbed his eyes when the announcement came through regarding the appointment of the new Finance Member. It was unexpected; the name was not known. What really caused this sudden release of the communique was an incident that happened in London. The news had leaked! And as India enjoys a press of her own—and a vigilent press—it was thought wise to make the appointment known simultaneously in India.

The appointment took the all-knowing Pundits in the Secretariat unawares. Said one of them, "Frankly, I do not know who he is." Another, "Well, all I know is that he entered the Civil Service in England the same year that I entered the Indian Service." You know how much people wished Sir George Schuster to continue. None was prepared for the news that Sir George would be leaving India so soon. His hands are full and his plans regarding the Reserve Bank have yet to be put on paper. Will he feel inclined to do so now? Or will he leave it to his successor to do as he peases?

Sir George is an indefatigable worker. He earns every penny he is paid out of the Indian Exchequer. I doubt if he will relax his effort, now that his successor has been appointed. We may count on his leaving ready-made plans for Sir James Grigg. And the invaluable assistance of Mr. Taylor and Mr. Arvamudha Ayyangar will be there to be drawn on by the new Finance Member.

Olympians have certainly felt disappointed over the supersession of the claims of Sir Alan Parsons. They argue that with the creation of the Reserve Bank and the transfer to it of the credit and currency of the country, the Finance Membership of the future would give full scope for administrative talents in the country. The suggestion is being universally made that there is little attraction for Sir Alan to stay on longer. There is another reason why Indian political opinion would have felt happy if a Service man had been appointed Finance Member. The Government of India Act lays down that in the Viceroy's Cabinet no less than 3 shall be men who have been in the service of the Crown for 10 years. The number may be larger. If Sir Alan Parsons had been selected 4 service men would have been in the Cabinet so long as Sir Joseph Bhore was in office.

But the India element of 3 would have remained unaffected. And the chance of appointing an Indian non-official to the Cabinet as successor to Sir Joseph Bhore would have definitely improved. Now, however Sir Joseph's successor will have to be a Service man and an Indian. So the supersession of Sir Alan Parsons is a blow to the hopes of the Indian politicians that the Viceroy's Executive Council will once again give scope for men drawn from public life.

An equally intriguing situation will arise in due course over the appointment of an Indian to the Railway Board. Mr. P. R. Rau, Financial Commissioner, is an exofficio member of the Board. But he is not a Member in the ordinary sense of the term. So that the Railway Membership of the Board is not held by any Indian. The occasion of Mr. C. P. Colvin's retirement early next summer will cause Indian politicals to demand fulfilment of a long-standing promise in this direction.

But a complication has arisen owing to the fact that when Mr. Hayman resigned from the Board the portfolio for Establishment was made to take on Traffic as an additional charge. The idea probably was that, as Indians expert in Traffic are not available, the post may go to European officials for some time to come. There are a number of Indian officials whose claims to succeed Mr. Colvin may be put forward seriously. There is Mr. B. N. Singh, Agent of Eastern Bengal Railway. There is Mr. Dutt-Gupta who acted as Director of Establishment in the Railway Board and earned his transfer from Delhi after the devastating audit of Lord Reading's household expenses. Mr. Sankara Aiyer, Director of Finance is a senior officer who can claim to rise to Membership by the same ladder which threw up Mr. Hayman.

I understand that this point will be put forward with all vigour by Members of the Assembly when they discuss the Railway Budget. There is, however, one trump card which Government may play. The Statutory Railway Authority is to be brought into being as early as possible and this may not be

(*Continued on page 123*).

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out **WORLD ECONOMIC SURVEY, 1932-33**

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... *Price:* Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

THE GOLD STANDARD AND OUR ECONOMIC TROUBLES III

By M. L. Doherty

Inflation. The Banker's Bogey! What has become of this charmed word? A word, which, like Swaraj, and Dominion Status, was, by sheer repetition, beginning to produce the psycological effect desired! Why has it ceased to be placarded about the Press? so that the great majority, who appear to have ceased to think for themselves, or, who, perhaps, prefer the Press to think for them, should regard it as something in the nature of a deadly disease which must not be allowed to touch our monetary system? Has Mr. Roosevelt's policy succeeded so far that the Bankers are beginning to scent defeat? Or, is it, that men, are, at last, beginning to think for themselves, and to see, that what they had been led to believe as a virulent poison, is in reality the only remedy for our economic ills? Whatever it is, however, the word seems to have fallen into comparative disuse, and this in spite of the fact, that inflation, in the Banker's sense of the term, has already taken place. And the disappearance of this form of propaganda from the Press is one of the brightest signs in the present financial horizon. For, if Mr. Roosevelt does succeed with his policy, as there is every likelihood that he may, it will probably spell the end of the dictatorship of finance, which has been the cause of all our misery, and the destruction of which, would be the safest and surest means of restoring economic prosperity and equilibrium.

The situation would be laughable, were it not so tragic. A nation is denuded of its currency to an extent that its people are unable to exchange the necessaries of life; and when it is proposed to adopt an alternative which would serve the same purpose equally well, if not better, this is at once howled down in the Press as something designed to increase our economic troubles rather than to relieve them.

Yet, it must have been obvious from the beginning that some form of inflation would be necessary, if the world was ever to recover economic equilibrium. But it required a Mr. Roosevelt to give us the lead. He first gave the lead by breaking up the International Economic Conference held in London last year, where he made it clear that he was not going to submit to an International Gold dictatorship. The problem of finance, as he then pointed out, was a domestic one, for the nations of the world to settle for themselves individually. And not only was Mr. Roosevelt right, but he has had the courage to put this principle into practice in the very teeth of world-wide opposion.

If a monetary system is going to perform its functions satisfactorily, *i.e.* facilitate the exchange of goods and services, it must first of all ensure that there will be a sufficient supply of tickets (which we call money) for the needs of the people, and that it will be capable of expanding to meet the growing demands of trade and industry with the advance of scientific development. And if a system fails to do this, it fails in the purpose for which it was intended. It is here that the danger lies in adopting, as a monetary basis, a scarce, and precious metal, whether it be gold, or silver, or both. And the greater the scarcity, the greater the danger.

In England, as in most countries of the world to-day, the unemployment, and economic distress, is due to a shortage of money which is due in turn to a shortage of gold, the metal which forms the basis of our monetary system, the bulk of which has been cornered and withdrawn from circulation. But when it is suggested that this lost gold should be supplemented by another precious metal, silver, or better still, replaced by an inconvertible paper currency, based on the national credit, the gold controlled British Press is at once up in arms at the spectacle of what it chooses to describe by a word which has come to be regarded as synonymous with national ruin, *viz.* Inflation!

The reason for this, is, that by the use of a monetary medium other than gold, gold would lose its present fictitious value, and the gold owners would not only have to bear this loss but they would lose their grip and control of the financial and industrial world. They would no longer be able to increase or deflect prices by the mere movements of gold. And if this commodity, as the monetary medium of exchange, came to be given up altogether, which would be the logical sequence to any such experiment, they would find themselves with the gold on their hands, to sell to Dentists and Jewellers, who would constitute their only market.

But what is England doing in the meantime to relieve the distress of her people? Nothing as usual; except criticising her neighbours, doing her best to debase her foreign exchange, and blaming America for making things more difficult for her, Patting herself on the back for her own financial un-wisdom, and filling her empty factories and starving homes with produce-less, consume-less, platitudes. Here, for instance, is one of Mr. Ramsay MacDonald's wise utterances speaking on the crisis in the House of Commons

> "Far better," he said, "for us all to go with tight belts into stability than well-fed into confusion".

Unfortunately, we do not all experience, equally, the wearing of tight belts, otherwise it might sharpen the wits of Cabinet Ministers to devise some policy more in accordance with the facts of the situation. Even though we tightened our belts to the point of starvation such a condition could not make for stability. Goods are being produced at a greater rate than they are being consumed, and so to attain stability, the rate of consumption must be accele-

1933-VALUATION
BOMBAY
AND
JUBILEE YEAR

rated. The policy of tight belts only puts farther back the prospect of stability.

Consumption cannot be equated to production by reducing production, because reducing production reduces purchasing power. What is needed is to increase purchasing power. But to increase purchasing power means to increase money, and to increase money means Inflation, according to the Bankers. In other words, the needs of the people, and the needs of the nation, must be subordinated to the lust of the Bankers. Money must be the master, not the servant of Industry!

Yet, it may be stated as a general truth, that currency expansion—whether in the form of precious metals or legal tender paper money—has always promoted industrial prosperity. On the other hand, every period of currency contraction has resulted in industrial stagnation and social misery. No country has ever succeeded in restoring prosperity without an increase in the purchasing power of the people.

Orthodox writers are fond of dwelling on the disasters accompanying periods of monetary inflation, such as occurred in Germany after the War. These writers are careful to avoid mentioning that this inflation was deliberately adopted to get rid of her internal War debts. It may have proved ruinous to her rentier and idle rich class, but it was during that period that her manufacturers were able to redesign their works and instal the most up-to-date machinery, with the result, that to-day, Germany is the best equipped nation in the world for the production of manufactured goods.

The increase in money supplies for the sole purpose of assisting trade and production has always proved beneficial to mankind. We possess in the abundance of natural wealth, of capital plant, and of efficient labour, all the resources necessary for the support of life on a generous scale, but we have failed to deliver the goods because our economics of distribution have been muddle-headed. We must bring the distribution of the goods up to the same point of efficiency as their production, and this can only be done by a rational money policy, because money is the only vehicle by which goods can be distributed.

The wealth of a nation is due and proportional to the industrial, the productive activities of its inhabitants. Money, currency and banking expedients are not, *per se*, wealth, but merely claims to wealth; nor are they in any sense productive in character, but are merely convenient means and methods of exchanging and distributing wealth. Hence, the virtues of any banking or currency system should be judged according as, and to the degree to which, the system contributes to, and facilitates production and trade.

And the system which enables or permits the production and distribution of the greatest volume of wealth, and thereby contributes to the well-being of the greatest number of the population, should be regarded as the best, and *vice versa.*

But never was a people so readily deceived nor so easily subdued as the British public of the present period. All one has to do is to raise the cry, inflation, and straightaway all classes turn from the only road leading to safety, plenty, peace and happiness. The great masses of our unemployed have come to accept their workless condition as a more or less permanent state, and even for many at present in work, the uncertainty of their position, and the constant threats to their standard of living, rob them of any sense of security in the future.

The youth of the nation, who should be entering into commercial and industrial life with eagerness and confidence, find in a large degree that the way is barred to them. They do not appear to be wanted. The future, which should be full of hope and promise for them, is without a prospect.

The decay in the morale of our people is but the natural result of the long drawn-out depression through which our trade has passed, and is emphasised by the lack of any reasonable prospect of recovery. And all this because our Government, either cannot, or will not, extricate the country from the grip of the international gold monopolists who are strangling us. By liberating ourselves from the shackles of this monopoly, and adopting an adequate National money policy, we could not only make our country prosperous in a few months, but we would have set an example which would be quickly followed by others, and would result in the freeing of the world's producers from the stranglehold of the usurer.

As Sir Basil Blackett says in his oft-quoted book "Planned Money"

"When it is remembered that Kings and Governments have, throughout the ages, insisted with jealous care on the prerogative of issuing money and controlling currency within their jurisdiction, it is somewhat strange to find modern states accepting as axiomatic, a limitation of their sovereignty in the sphere of money, so far-reaching in its effects on their own powers and on the daily lives of their citizens, as is involved in their agreeing to conform in all circumstances, to a standard of value over which they have no control."

Before our Government decided at the instance of the League of Nations to deflate the currency and return to gold, schemes to the tune of hundreds of millions of pounds had been drawn up and sanctioned by the Lloyd George Government, but all these had to be dropped on the recommendation of the Cunliffe Currency Commission, as with deflation of the currency and return to gold policy there would be insufficient money to finance them. By financing such schemes, now, we would have the opportunity of putting new money into circulation in a manner which is at once expedient and economically sound. It would act as a stimulus to trade, enable unsold goods to pass into consumption and thus serve the purpose for which they were produced. It would tend to bring prices back to an economic level, and would open the way for a return to their jobs of large numbers of our unemployed. But the present British Government is not prepared to sanction such schemes. This was stated, definitely, in the House of Commons last year, followed two days later by the announcement that the same Government were willing to advance millions of pounds for the construction of a National home for the Jews in Palestine!

Fortunately, for our trans-Atlantic neighbours, they have at last found a man as President who understands the Banker's game, and is not afraid of their shouts and threats. And it may well be, that the stand he is making against them, will, in the end, force our Government to follow his example and study the needs of our own country and people first.

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

January, 16.

Since reporting last week there has not been much of a change in the market. Business in various sections has been fair to good while values have been well maintained though towards the close they are ruling slightly below the highest. 3½ per cent. paper has been changing hands near Rs. 83-4 while new loan has come to business at Rs. 95-6. 1960-70 4 per cent. loan had buyers near about Rs. 99-2. Jute shares have been a shade easier. Howrahs after touching Rs. 53 now stand at Rs. 52-8 while Kamarhattys stand at Rs. 539, after being dealt at Rs. 547. Business in this section has been rather small.

Cotton shares were also in good demand Kesoram ordinary having changed hands up to Rs. 3-10 and preference up to Rs. 105. Bengal-Nagpurs came to deal at Rs. 18-4 coals were, however, easy and the list of transactions was small. Burrakur fell back to Rs. 14-12, South Karanpura at Rs. 5-3 and New Beerbhoom at Rs. 13-1. Teas though steady are far from the rise that has taken place in the commodity itself. Enquiry however towards the close was better and values also in isolated instances showed improvement. Hattikhira improved to Rs. 22, Dhilakhat to Rs. 27-12 and Tangani to Rs. 6-12. Banks were well asked for Imperials fully paid touching Rs. 1,250 and contributories Rs. 315, Central and India banks showed no change, the former standing at Rs. 23-12. In the miscellaneous section Bengal Iron moved up to Rs. 4-6 while Indian Iron were rather queter at Rs. 5. Cawnpore sugars Indian Iron were rather quiter at Rs. 5. Cawnpore sugars were dealt in at Rs. 31-10, Carews however were easy at Rs. 16-12. Standard Wagon were marked up at Rs. 50 and Burn & Co., at Rs. 154. Titagarh Paper deferred were again in good enquiry at Rs. 5-14. Bengal Telephone new issue changed hands at Rs. 14.

JUTE

Further strength on the reserve of sellers was noticeable in the jute market though the closing was a shade easier on profit-taking. May Futures touched Rs. 33-4 a new record of the settlement. There were sellers of Ready Firsts at Rs. 29 per bale and at Rs. 5 and Rs. 4-8 per maund for Jat LR and XLR respectively. Although no business has been reported at these levels sellers at the moment are very firm in their ideas and not in a mood to discount prices. The undertone of the market is very healthy and the tendency is for a rise than a fall.

JUTE MANUFACTURES

Like raw jute the jute goods market is also steady with a fair amount of business having been done by mills for all positions, near and forward, hessians as well as heavy goods. There are profit-takers at a rise but the undertone of the market is however fully steady. The bullish American sentiment is an encouraging feature of the market and may ultimately lead to higher prices. Purchases at decline are therefore always advisable.

COTTON

Fully steady conditions have prevailed in the market. Japanese houses are reported to have made purchases to the extent of 1½ lakhs of bales since the lifting of the embargo. Broach April-May has touched Rs. 202. Bears who sold considering the rise to be sharp were caught and had to make hasty cover. The American cotton markets are very steady and tending towards a further rise. At the moment Indian cotton is still comparatively cheap and purchases at every small decline are advisable.

LINSEED

During the past week very steady conditions have prevailed in the seeds market partly on better American advices and partly on reported damage caused to the Indian crop due to the recent hailstorms in northern India. Stocks of ready are not large and the same is at a small premium over the May Beta positions. Business in May Beta was done up to Rs. 4-6 and the tone of the market is steady. Except on profit-taking any decline in values at the moment is not possible.

WHEAT

For the same reason as for linseed the wheat market also has ruled steady and an advance of two annas per maund has taken place in May Beta rates the same being Rs. 2-15 as against Rs. 2-13 a week ago. The readies however have shown no similar strength, due to a fair amount of stocks lying at ports and eagerness to dispose off the same in view of the approaching new crop.

BULLION

Gold.—During the better part of the week the market was more or less stationary—towards the close due to the decline in Franc to 81.21 the market has ruled steady values going up to Rs. 31-14 against Rs. 31-11. London quotations have similarly gone up from £6-7-0 to £6-8-6 The tone of the market is steady. Stock and offtake remain more or less unchanged.

Silver.—London silver has gone up by about a half penny due to poor offerings and American and Chinese buying. For the same reason local market which was bear sold responded quickly and values have gone up by a rupee. The latest quotations are Rs. 55-10. Stocks are no doubt heavy and offtake poor and technically there is no reason for any appreciable rise in the near future. But the sentiment has been very much in favour of a rise and the slightest bull factor will forcibly push the values up.

WORLD OF INDIAN FINANCE

Calcutta, January 26.

Money has been extremely tight all through the week, with a slightly easier feeling towards the finish. Till Thursday, interbank call money was quoted 3½ per cent., while on the closing day business was done at 3½ per cent. to 3¾ per cent. The peculiar feature about the stringency in the money market is that, while some banks seem to be well supplied with funds, others are reported to be avid takers of short credits. One of the explanations offered for this state of affairs is that the present tightness must be due to banks having to take up the purchases of T. T made at the time of the ratio discussion in the Assembly. It was known that there was at that time considerable buying of forward T. T. ; and it is quite possible that these deliveries have come to mature. This is put forward only as a hypothesis; but there are grounds to believe that it is a far more approximate explanation of the current pressure for money than any other so far offered. Trade demand as such has not accounted for any diversion of funds from the money market to any extent worth mention. The squeeze for funds should, therefore, be due to special factors.

It is noteworthy that this firmness has occurred at a period when the market has been selling sterling to Government on quite a substantial scale and must have been in receipt of considerable payments thereagainst. To the extent that the purchases of T. T. are now being taken up, this should stimulate sales of T. T. for forward position in some measure. From this point of view, these developments must be considered as having a bullish influence on exchange. The policy of the Government would seem to be to reduce the volume of floating debt by the process of arranging their new borrowings on a lower basis than the Treasury Bills maturities. Taking the Treasury Bills position, it may therefore be said that, on balance, the market would be in receipt of surplus funds. There is also a fairly large inflow of funds from the increased purchase of sterling by the Controller of the Currency. There are, therefore, accordingly influences at work whose effect would be to provide an automatic curb to undue rise in money rates.

All the markets in Calcutta were closed during the latter half of last week. At the close of business, jute and hessians showed considerable strength while the gilt-edge market was comparatively easy. Weak advices from London affected the price of 3½ per cent. Rupee Paper in which business was done at Bombay where the markets were open. A temporary squeeze on account of gold shipments stressed the monetary stringency and resulted in the weakening of giltedge. After the temporary tightness was over and when London showed renewed strength, rupee securities firmed up in sympathy. When the markets reopened early this week, considerable speculative activity in 3½ per cent. Rupee Paper was manifest. Money continued tight in this centre with call ranging between 3 to 3½ per cent. Though the London quotations for 3½ per cent. India Sterling Paper rose only by half a crown between Monday and Thursday, 3½ per cent. Rupee Stock recorded a rise of 7 annas with considerable steadiness. The continued strength of giltedge in spite of the tightness in the money market during this period is a striking phenomenon and one contrary to past experience. The improvement in the Treasury Bills borrowing rate was a contributory factor to a market which was otherwise swayed by a bullish sentiment. At close of business to-day, Paper sagged to 83/5, chiefly, it is believed, on account of profit-taking. Other securities continued firm with avidity on the part of purchasers and a desire for higher prices on the part of sellers. In the commodities market the spurt in jute and hessians proved short-lived and the markets have generally shown an easier tendency as a result of profit-taking.

The Treasury Bill operations with the Government during this period gave the market neither a surplus nor drew away funds more than were available through the discharges. On the other hand, in spite of the high call rate, the Government were able to score a further record by bringing down the average rate of acceptances from Rs. 2-8-11 last week to Rs. 2-4-0 in the current week. This is a pointer to the fact that the bulk of the lenders should have come from Bombay where it is reported that money conditions were distinctly easier in comparison with Calcutta. Also, Bombay was a seller of government securities to Calcutta which was an eager purchaser. While the Treasury did not help the money market, in the current week, through its Treasury Bill operations, it has done it a good turn by releasing a very appreciable amount of funds through its purchases of sterling intermediates.

The Home Remittance *communique* for the week ended January 20, 1934 shows a remittance of £2.2 millions during the week. Considering the fact that only £1 million was allotted at the auction and that the whole of the latter half of the week was closed in Calcutta, it can easily be inferred that the activity was concentrated in Bombay. Last week's gold shipments were in the neighbourhood of Rs. 2½ crores and the large amount of intermediates sold easily explains this. The ease in the money market in Bombay is likewise explained by the redundant supplies set loose by this factor.

The last *communique* of the Home Remittances includes a special transaction, *viz.*, the transfer of £5 million from the Home Treasury balances to the Gold Standard Reserve, which was utilised for a corresponding transfer of gold to the Paper Currency Reserve, and the cancellation of created securities in India to the tune of 6¾ crores. The object of this gesture is apparently to impress upon the market Government's intention of strengthening their Reserves by replacing created securities by a move which should be welcomed especially on the eve of the inauguration of the Reserve Bank. It may be recalled that early in January last a similar transaction occurred. The balances of the Home Treasury at the beginning of January, 1933 were in the neighbourhood of £19 million, which rendered it possible to effect the transfer without in any way affecting the resources available to the Secretary of State for meeting current commitments. With the recent heavy purchases of sterling and the accretion to the Home Treasury of the still-outstanding instalments of the last sterling loan, it has apparently been found possible to repeat a similar transaction in the current year. One should have thought that the resources available at the other end would be kept intact till occasion arose for utilising them for expansion of currency in India when it became necessary as a result of large purchases of sterling. The action or the Government on this occasion should be interpreted as an indication of their confidence in further purchases of sterling without having recourse to expansion of currency. The wisdom of this step and of any further similar transfers of sterling resources will only be justified by actual events.

Exchange was very firm, due to the continuance of gold exports from Bombay on a large scale and also to the tightness of money in Calcutta. There were, however very few export bills on merchandise account in either centre. Business was done on the basis of 1s. 6 3/32d., for three lots and 1s. 6 1/16d., for one lot. But the fairly general procedure was two to one.

On the Sterling tender day £30,000 at 1s. 6 3/32d., were received and allotted in full. Tenders for £47,170,000 at 1s. 6 1/16d., were also received and allotted approximately 2 per cent.

The closing rates are: 1s. 6 1/16d., T.T. upto February 16; 1s. 6 1/32d., February-March T.T.; and possibly up to mid-April; 1s. 6d., April-May T.T.; and 1s. 5 31/32d., T.T. onwards.

Bills may be quoted: 1s. 6 3/16d., up to February; with business possible at 1/32 lower; 1s. 6 1/8d., March-April; and 1s. 6 3/32d., onwards.

Money was in good demand throughout the week, with a slight abatement towards the close. Inter-bank money was quoted at 3½ per cent. till Thursday and was availabe at 2½ to 2¾ per cent. on Friday. Firms' money for call and three days' notice was quoted at ¾ per cent. Onemonth, twomonth and threemonth deposits were quoted at 1¾, 2 and 2 per cent. respectively.

CHEQUES:

Although the use of cheques has increased beyond all anticipation during the past twenty years, there are still many payments settled by other means which could, with advantage, be made by cheque. Comparatively few years ago it was, generally speaking, only persons of means who kept private Banking accounts, but modern methods aim at providing Banking facilities for the million. Lloyds Bank will open an account with a very modest amount, and the facilities it offers to customers cannot be excelled.

The course of the Monetary Bill through the Banking Committee in the U. S. A. has been in the centre of the stage of international finance during the week. And as is usual in American politics, there has been a goodly crop of side issues, of cracks and fissures in the various parties, and room for ample speculation about future developments different from what might be presumed to have been the official plans. Since last these columns were written, there has been a revival of the rumour that an Anglo-American "money war" is possible as a result of the Monetary Bill of President Roosevelt. The Treasury officials in America, it is reported, have not in the least been impressed, much less upset, by such reports. They have evidently believed that the developments in American policy are such as to offer less and less of threat to the British authorities and that during the past two months there has been ample reason to hope for co-operation between the two countries in the monetary sphere. That there has been less antagonism between the two may be easily conceded. Mr. Roosevelt's recommendation to the Congress that the minimum devaluation of the dollar should be 40 per cent. has been viewed abroad with greater favour than his earlier actions in this field. And it is probably on the strength of these that the *Journal of Commerce* of New York has ventured on the report that Britain and the United States have reached an agreement in order temporarily to maintain a five-to-one dollar-sterling ratio.

It will be remembered that at the beginning of the period under review the dollar was well under a quotation of 5 and it would have been useful if in the interview, that was sought of him, Mr. Morganthau, Secretary of the Treasury has given some indication of his explanation of the strength of the dollar in London at the time.On the other hand, Mr. Morganthau threw out a riddle by suggesting that "if we had a stabilisation fund now it would be more useful". This remark has been interpreted in some circles as an indication that the devaluation of the dollar by presidential proclamation will quickly follow the monetary Bill. From all accounts, the Stabilisation Fund which Mr. Morganthau is wishing for will not be long in coming. The Administration has already intimated that the enactment of the Dollar Revaluation Bill by Tuesday was imperative owing to the refinancing operations to be undertaken and that the Bill would be put in hand, as soon as Mr. Roosevelt has sent to the Senate the special War Department estimate.

One big step in the passage of the Monetary Bill has been taken by the approval of the Banking Committee of the Senate. But this has also the seeds of trouble in the future. For the Committee has passed some vital modifications of the Bill, including placing the Stabilisation Fund of £400 million under the control of a Board of 5 members instead of under the Secretary of the Treasury alone. A limit of two years was placed on the operation of the stabilisation fund and also on President Roosevelt's power to devalue the dollar. It is only to be expected that the Administration leaders will not acquiesce in the fiat of the Banking Committee and will make preparations to restore the Bill to its original form.

In such an attempt, there is the difficulty of placating or overcoming opposition on two important issues. One is the question of the legality of the Treasury's acquisition of the gold held by the Federal Reserve Banks. That the Administration has already earmarked all the gold in the country for the relief of its own embarrassments is certain. On July 18th, Mr. Morganthau ordered the indefinite extension of the time limit for the surrender of gold which was due to expire on the midnight of January 17th. And during these days not only has Mr. Cummings, the Attorney-General, been brought round to deny the Federal Reserve banks, who are stock holders of reserve banks, all title or interest in the gold coin or bullion and affirm the constitutionality of the sequestration of the Federal Reserve Banks gold provided in the Monetary Bill, but even Mr. Eugene Black, Chairman of the Federal Reserve Board, has been induced to make a similar declaration. But the trouble is Senator Thomas declares that his opinion is unchanged. He has gathered to his support Senator Gore and Senator McAdoo. Though these have been among the supporters of the President, they have now formed a clique by themselves and have hoisted the banner of revolt against the Monetary Bill and the seizure of the Federal Reserve Bank's gold. Even the sanctity of the gold clause, now more or less completely exploded, has been sought to be revived as a matter calling for re-examination. Apprehension is also felt at the powers proposed to be conferred on the Treasury for controlling credit and thereby revolutionising the country's banking structure. And the recent announcement of the Reconstruction Finance Corporation, referred to in our Overseas columns, affirming its readiness to change the directorates of banks in which it has large holdings of preferred stock, must have deepened these apprehensions. But there is little doubt felt in well-informed circles in America that in the end the President will prevail over every opposition that is cropping up.

The other question calling for adjustment is that of silver. A notable development of the week, which may be referred by the way, is the signing of the London Silver Agreement by President Rodrigues on behalf of Mexico. Turning to America, Senator Wheeler has given out the outline of a scheme which is intended to prevent a flood of silver from entering the United States from abroad and which he proposes to offer as an amendment to the Monetary Bill. Senator Wheeler states that the silver group has compromised on a plan which is a purchase proposition designed to stabilise silver and keep it pegged to gold so that there may be no fluctuation. It is difficult to see to what length President Roosevelt would be prepared to go in order to satisfy the silver enthusiasts. The fact that President Roosevelt has always been prepared to do whatever is necessary to help the silver interests in America suggests that silver proposals might not stand in the way of the progress of the Monetary Bill as he first conceived it.

THE IDEAL POLICIES

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -

COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 89/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 3¾ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 3¼ per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

*Represents transfer from Home Treasury to Gold Standard Reserve in England against corresponding transfer of gold from Gold Standard Reserve to Paper Currency Reserve in India. The increase of gold in Paper Currency Reserve in India was set off by a corresponding cancellation of 'Ad Hocs.'

PUBLICATIONS OF THE LEAGUE OF NATIONS

WORLD ECONOMIC SURVEY, 1932-33

Just out

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Since reporting last the market has ruled steady but quiet with better business resulting after the holidays. Securities have ruled very steady 3½ per cent. paper being dealt upto Rs. 83-12. Jute shares were however less in demand Howrahs after touching Rs. 53-6 are down by a rupee. Coals had had a very sharp decline with less interest in evidence. Tea shares were similarly easy on profit taking. Sugar shares were very weak on heavy selling due to the damage reported to several mills in north Behar by the recent earthquake.

3½ per cent. paper has improved by 8 annas from Rs. 83-4 to Rs. 83-12 with more buyers in evidence. New Loan has come to deal at Rs. 95-9 and 1960-70 is quoting about Rs. 99-5.

Earlier in the week Jutes were very steady when Howrahs were dealt in at Rs. 53-4 and Kamarhatty at Rs. 555. Later on with the weaker hessians markets and on profit taking values have been lower and towards the close Howrahs are quoted at Rs. 52-8, Kamarhatty at Rs. 548, and Nationals at Rs. 22-6.

Coal shares were very easy on heavy selling and profit taking. Burrakur dropped to Rs. 12-4 but later improved to Rs. 13, Bengals came to deal as low as Rs. 215, but later improved to Rs. 222, New Beerbhoom after touching Rs. 11-8 closed slightly steady at Rs. 12. Raneegunj however kept steady at Rs. 41. Equitables were dealt about Rs. 19.

Tea section though easy was however well maintained. Business was on a very meagre scale. Bishunath came to deal around Rs. 27-12. Hacimara at Rs. 40, East India at Rs. 15 and Jutlibari at Rs. 17-8 and new Samanbagh at Rs. 28-12.

Sugar shares had a very weak tendency. Champaran closed easy at Rs. 18-12 and Samastipur at Rs. 8-8 Cawnpore were marked at Rs. 31-8. Ryam stood at Rs. 30, New Savan at Rs. 11-8. Carew & Co. were steady at Rs. 16-12.

In the miscellaneous section there was some enquiry for Bengal Telephone new shares at Rs. 14-4. Indian Wood Products came to deal at Rs. 30-4. U. P. Electric came to business at Rs. 124. Indian Iron & Steel were easy at Rs. 5-2. Bengal Iron came to business at Rs. 4-4. Rubber shares were more in demand. Dunlop Preference changed hands at Rs. 103. Burn & Co. showed further improvement and were marked at Rs. 182-8. Imperial Bank contributories changed hand at Rs. 309, while Centrals improved to Rs. 24-6.

MADRAS STOCK EXCHANGE.

(By Wire)

Madras, January 25.

The securities market was erratic at the beginning but closed steadily to firm. 3½ per cent Paper went down to Rs. 82-14 but is now quoting Rs. 83-11. A good business passed in medium-dated loans which have firmed up with no sellers in the market. 3½ per cent 1947-50 loan continued to be in good demand at Rs. 95-8 with shortage of scrip. 4 per cent 1953-63 Mysore State Loan Bonds were done at Rs. 100-4 and 5½ per cent Mysore 1938 at Rs. 109-4.

Madras Corporation debenturers were in good demand at higher prices. United Nilgiri 1936 debentures changed hands at Rs. 101 with buyers over. W. E. Smith & Co. preferences were wanted at Rs. 90. Tata Iron and Steel first preferences were done at Rs. 160 and the second preferences at Rs. 115.

Bank of Indias were done at Rs. 103-8 while Indian Banks (Rs. 50 paid) have gone up to Rs. 93 with buyers over. Bank of Hindustan is firm with sellers scarce at Rs. 32-8. Central Bank fluctuated between Rs. 23-8 and Rs. 24; but State-Aided Bank of Travancore remained weak at Rs. 15.

Cotton mills were dull, business passing only in Buckingham and Carnatics at Rs. 181. Kaleeswaras sagged to Rs. 290 sellers; and Sitaram fell sharply to Rs. 51 ex-dividend. Coimbatores were done at Rs. 48-8.

Vellore Electrics were wanted at par ex-dividend while Trichy Srirangams were done at Rs. 148. Madras Telephone continued to be steady at Rs. 16.

Indian Cements rose sharply to Rs. 288 and Shahabads to Rs. 286 at the close with a good volume of business passing.

In Sugars, Deccans improved to Rs. 259 and India Sugars to 4 annas premium. East India Distilleries had sellers at 25s. 9d. with buyers uninterested. North Indian Sugars were neglected on rumours of havoc wrought by earthquake.

Cochin Malabars continued in request at Rs. 1-4 with sellers none below Rs. 1-8. Peermade Teas have been firm sellers at Rs. 23-4 with buyers coming up to the limit gradually. Periakaramalais were wanted at Rs. 35 and Highland Produce at Rs. 15-8 with none offering. Nilgiri Neerugundis shot up to 12 annas with buyers over. United Nilgiris were done at par cum dividend and look like going up.

In the Miscellaneous section, United Breweries were enquired for at current levels while Singareni and Talchers were neglected. Sterling shares were an active feature with Gold Minings and International Nickels predominant.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

DATED CALCUTTA,
The 22nd January, 1934.

JUTE AND JUTE GOODS

JUTE

After ruling very steady during the holidays the market towards the close has ruled very quiet. May futures after touching Rs. 34 closes at Rs. 33 to-day the highest quotation of the week being Rs. 34.

Business in ready firsts and for February was done up to Rs. 30-8. Sellers towards the close have been eager for business at Rs. 29 for readies. Business for Boldfine has been done at Rs. 28-6 and for Lightning at Rs. 25-8. There are sellers of Tassa at Rs. 23-8.

The rise in the earlier part of the week was due to bear covering in the local as well as in London market. Technically the position of the market was heavy bull and a liquidation was possible any moment. Easier conditions of the hessians market forced unloading on the market and the values therefore dropped by about Rs. 2.

In loose jute there has been no business mills all along have remained out of the market. Quotations have been easy by two annas there being sellers for Indian Jat LR and XLR at Rs. 4-14 and Rs. 4-6 respectively.

The arrivals of raw jute due to higher values have shown an improvement during the recent weeks. But on the whole the undertone of the market is healthy eventually leading to higher prices after the decline.

The London jute market has ruled quite in sympathy with the Calcutta market. A fair business has been done both at rise and decline. Towards the close of the week buyers have been waiting for lower prices and consequently only a small amount of business was done. There is reluctance on the part of the buyers to pay higher prices but there is always a fair amount of enquiry at decline.

JUTE MANUFACTURES

Earlier in the week the market was quite steady on better American sentiment and improved conditions of the Cotton markets both at home as well as abroad. Later on due to poor enquiries from the consuming centres and in anticipation of lower exports this month the market has shown a weakness and values are on downward trend. Hessians ready nine porter has dropped down from Rs. 10 to Rs. 9-12 and the tone of the market at the time of writing is rather easy.

In sympathy with hessians heavy goods market has also ruled quiet. B. Twills have changed hands at Rs. 23-12 and Heavy Cees at Rs. 24-12.

COTTON AND COTTON GOODS

COTTON

(*By Wire*)

(From our correspondent)

Bombay, January 26.

The sharp rise that was noticeable in the cotton market following the Indo-Japanese settlement in India and on prospects of a further reduction of crop in U. S. A. could not be maintained. There was heavy dull selling in Indian as well as American and Liverpool markets. Broach April. May which touched Rs. 206 has dropped down by 10 points and a similar fall has taken place in New York and Liverpool. The latter market looks top heavy and the belief there is that the crop may turn out larger than expected. The undertone of the market is however quite healthy. Trade has been absorbing hedges and sales. Technical position of the market is improved and buying at further set-backs will not be undesirable.

U. S. COTTON REPORT

Washington, Jan. 23.

American cotton of the growth of 1933, ginned prior to January 16, totalled 12,559,000 bales, counting round as half bales, announced the Bureau of the Census, Department of Commerce, to-day in its eleventh ginning report of the season.

This compares with 12,418,310 bales last year 15,996,382 bales two years ago and 13,594,388 bales three years ago.

The final report of the season will be issued on March 20.

PIECEGOODS

Very dull conditions have ruled in the piecegoods market due to the wide spread destruction of life and property caused by the recent earthquake in Bihar and Nepal. The offtake has been considerably reduced but even in absence of this enquiry the bazar rates have been fully maintained.

So far the fresh business is concerned a noticeabl increase has taken place during the current week in the nature of broadening enquiry. Although the actual amount of business passing has been small there being more a price testing.

Some business has however resulted in Lancashire Dhooties fancies and prints and also in Indian grey Dhooties and Shirtings for forward position. Very little business has been done from Japan, but numerous enquiries have been made and it is likely a larger turnover will result as soon as Japanese manufacturers have been officially informed of their respective quotas.

YARN

Due to the improvement in the values of raw cotton and poor stocks this section has ruled very steady and fresh business has been done at advancing rates.

BULLION

GOLD

Calcutta, January 25.

There have been wide fluctuations in the price of gold during the period under review following the up and down movement in London-Paris-Newyork cross rates. Opening easy at about Rs. 31-12 the market went up to Rs. 32-13 then again dropped to Rs. 32-4 only to rise back to Rs. 32-12. Following the announcement made by President Roosevelt to buy gold abroad and devaluing the dollar 40 per cent. there was a good enquiry for gold in the Indian markets at advancing rates. Stocks are now coming down from 10 lakhs tolas to 5-6 tolas and the daily offtake is at about 3,000 tolas in Bombay. Shipment per S. S. Cathage amounted to Rs. 98 lakhs. Sovereigns are quoted at 20-12-6.

SILVER

During the early part the silver market was steady on the hope that President Roosevelt would include a scheme for the rehabilitation of silver by means of the increased use of the metal for currency purposes of that country. But the postponement of the consideration of this question until he obtains experience of the result of London Silver agreement hit the bull operators who were carrying top—heavy commitments and a liquidator was forced upon the market. Values had gone up to Rs. 55-9 but later declined to Rs. 54. These is a premium of about Rs. 3 for Fagan settlement over the readies, while the latter is about Rs. 6 below the import pority.

Stocks in Bombay are standing at about 8,000 bars and in Calcutta about 1,000 bars the daily offtake is about 35 bars.

The London market has improved to 19¾d. There has been Chinese buying. India however sold at the rise. Shanghai dollar has improved from 1s. 4 3/16d. to 1s. 4 7/16d.

LONDON (Air-Mail Week)

A fall of 3/16d. for both positions bringing prices to 19$\frac{3}{8}$d. marked the opening of the market during the week.

China gave support as also the Indian Bazaars to some extent. The volume of business, however was not large.

America was inclined to sell in the afternoons, without showing any disposition to accept lower prices.

A fairly steady tone prevails in the market and no wide changes are likely to take place in the near future.

The following were the United Kingdom imports and exports of silver registered from midday on the 1st instant to midday on the 8th instant:—

SUGAR

There was a sharp rise in sugar by annas eight per maund due to the damage caused by the recent earthquake to the sugar mills situated in North Bihar. This market was ruling dull and stagnant for a very long time and was seen to be more active during the current week only.

Serious damage has been caused to several sugar mills in Bihar and some of them will not be able to work wholly or for the better part of the current season. The following mills are reported to be badly damaged.

Champaran
Lobat
Motibari
Majhwalia
Samastipur
Japaba
and much loss is reported in
Sidhwalia
Ryam
Rija and
Champatia sugar mill.

Apart from the sentimental rise caused in the market due to the shortage of supply of Indian sugar from the above mills there has been no other remarkable event in the sugar market to report.

TEA EXPORTS

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong are issued by the Indian Tea Association.

Quantity of tea entered for export to United Kingdom for the first half of January, 1934.

Calcutta Black 4,375,648 lbs.; Green nil.

Chittagong Black 3,460,689 lbs.; Green nil.

Quantity entered during the corresponding period last year.

Calcutta Black 7,535,245 lbs.; Green nil.

Chittagong Black 4,688,767 lbs.; Green nil.

Total from April 1, 1933 to January 15, 1934:—

Calcutta Black 145,929,467 lbs.; Green nil.

Chittagong Black 69,896,170 lbs.; Green nil.

Total 215,825,637 lbs.

Total from April 1, 1932 to January 14, 1933.—261,382,757 lbs.

INDIAN TEA SALES

At the London auction on January 22, 27,900 packages of Indian tea were submitted for sale.

There was a good demand at firm rates and prices were maintained.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 13¼d., to-day's auction 13¼d. lb.; Common Broken Pekoe last auction 13d., to-day's auction 13¾d. lb.; Common Orange Pekoe last auction 13d., to-day's auction 13½d. lb.; Common Broken Orange Pekoe last auction 14d., to-day's auction 13½d. lb.; Common Broken Pekoe Souchong last auction 13d., to-day's auction 14¼d. lb.

At the London auctions January 23, 17,600 packages of Ceylon tea were submitted for sale.

There was a quieter demand. Low medium qualities were firm. Other sorts were irregular and thin liquoring kinds showed weakness.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 14d., to-day's auction 13¾d. lb.; Common Broken Pekoe last auction 14d., to-days auction 14d. lb.; Common Orange Pekoe last auction 14¼d., to-day's auction 14¼d. lb.; Common Broken Orange Pekoe last auction 14½d., to-day's auction 14½d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 14⅓d. lb.; Clean Common Broken Pekoe last auction 14¼d., to-day's auction 14¼d. lb.; Clean Common Orange Pekoe last auction 14⅝d. lb.; Clean Common Broken Orange Pekoe last auction 15d., to-day's auction 15d. lb.

Value prices at the Indian tea sales in London yesterday were as follows:—

Clean Common Pekoe last auction 14⅓d. lb.; to-day's auction 14⅛d., Clean Common Broken Pekoe last auction 14¼d., to-day's auction 14¼d. lb.; Clean Common Orange Pekoe last auction 14⅝d. lb.; today's auction 14⅝d., Clean Common Broken Orange Pekoe last auction 15d., to-day's auction 15d. lb.

CALCUTTA

GRAINS AND SEEDS

Due to the recent damage caused to winter crops by the cold and earthquake the grains market have ruled steady. Linseed after being dealt at Rs. 4-8 is slightly easy at the close the quotations being Rs. 4-6-6. Wheat has also slightly improved from Rs. 2-13 to Rs. 2-15 and is steady but quiet at the top. The undertone of the market is however healthy.

AGRICULTURE IN U. S. S. R.

A description of the results which the U.S.S.R. had achieved in various fields of economic activity since the establishment of the Soviet Government would be incomplete without a review, however brief, of the developments in the production of agricultural raw materials. It should be observed that a socialist system of national economy not merely affords the opportunity, but actually necessitates the application on a national scale of the measures undertaken. These measures require the investment of vast sums of capital, on a scale unknown to countries whose economic system is based upon private ownership of land and of the means of production. It is, therefore, obvious that the problem of the rational utilisation of the agricultural resources of the Soviet Union has some peculiar characteristics of its own and assumes great importance.

During the last few years the production of agricultural raw materials in the Soviet Union has undergone a pronounced change, in response to the needs of the new industries established. The extent of these changes can only be fully realised if the present position is compared with that which obtained in pre-war Russia.

A great part of the territory of the U.S.S.R.—more than 80 per cent. of the total area—still remains outside the scope of the production of food, fodder supplies, or agricultural raw materials for industry. Equally remarkable is the very low figure of cultivated land. Arable land, together with orchard and garden land, comprises no more than 10 per cent. of the total area of the Soviet Union, and only 17 per cent. of the total agricultural area. It may be inferred from these figures that by far the greater part of the area under consideration—in fact, about 80 per cent.—is covered by wild vegetation. Within this category, forests take first place, pasture second, and grassland (heaths, etc.) third.

The following table gives the area of the different kinds of land in hectares and as percentages of the total agricultural area and of the total territory of the U.S.S.R. The figures relate to the beginning of 1931:—

	Hectares ooo's	As % of total agric. area	As % of total territory
Forest and shrubland ...	950,000	54.4	44.1
Pasture	241,084	16.3	11.2
Arable land	197,611	13.3	9.2
Grassland	46,415	3.1	2.1
Gardens and orchards ...	11,461	0.7	0.5
Other Agricultural land ...	28,780	1.9	1.4
Non-agricultural land ...	675,000	...	31.3

The cultivated area under grain crops is devoted chiefly to cereals, among which wheat and rye predominate. The area covered by these two crops exceeds 60 per cent. of the total area under grain crops in general. Wheat holds first place, the total area sown with wheat being 10 per cent. greater than that sown with rye. Next in importance come oats and barley. Taken together, these four crops extend over more than 80 per cent. of the total area devoted to grain. A marked tendency in the development of the agriculture of the Soviet Union in the last few years has been the increasing relative importance of industrial plants among crops as a whole. Figures giving the area sown in 1931 show the following distribution of crops, as percentages of the total area sown:—

	Grain and cereals	Other food and technical crops	Fodder crops and grass
1929	81.3	14.5	4.2
1931	76.6	17.0	6.4

Potatoes cover the largest area among the second group and take fifth place (after barly) among crops as a whole. They are followed by sunflower, flax and cotton. Industrial plants in 1931 (potatoes are both a food and a technical crop) were distributed as follows in order of importance according to the area covered:—

In 000's of hectares

Potatoes	... 6,111	Soya ...	... 461
Sunflowers	... 4,600	Mustard	... 334
Flax ...	... 3,065	Mustard ...	... 334
Cotton	... 2,164	Vines ...	... 271
Sugar Beet	... 1,376	Castor-plant	... 161
Hemp ...	... 924	Makhorka (crude tobacco)	... 93
		Tobacco	... 89

Taking crop as a whole, their order of importance in respect of the area covered by each, is as follows:—

1. Wheat.
2. Rye.
3. Oats.
4. Barley.
5. Potatoes.
6. Millet.
7. Sunflower.
8. Flax.
9. Cotton.
10. Buckwheat.
11. Sugar Beet.

It is interesting to note that the area under cultivation in the U. S. S. R. represents 20 per cent. of the total world cultivated surface, which was 950 million hectares for 1930. Grain crops also occupy the first place in world agricultural statistics; in 1930 they were distributed as follows:—

In million hectares

Wheat ...	... 150	Oats ...	... 60
Rice ...	... 120	Rye ...	... 48
Maize ...	... 80	Barley ...	... 40

These crops, with a total area of 498 million hectares, represent about 66 per cent. of the total area sown, while grain crops in general represent about 72 per cent. It will be seen from this that the crop distribution in the U. S. S. R. shows a greater prevalence of grain crops over others (77 per cent.) than is shown by world agriculture as a whole.

The area covered by the chief crops in the Soviet Union, expressed as a percentage of the total world area covered by the same crops, is as follows:—

Wheat ...	... 25	Potatoes ...	... 30
Rye ...	... 60	Sunflower ...	... 76
Oats ...	... 28	Flax ...	... 30
Barley ...	... 17	Cotton ...	... 6
Total Grain ...	... 19		

In conclusion it should be observed that the U. S. S. R. is the main producer, for the world as a whole, of rye and sunflowers, and occupies a very high place in the cultivation of sugar beet, potatoes, flax, oats and wheat. On the extent of the forests and the quality of Russian timber it is not necessary to dwell as these have found general recognition.

The measures taken by the Soviet state to reconstruct the entire foundation of agricultural production have given prominence to two features, which exercise a growing influence—an extension of the cultivated area coupled with the transition from extensive methods of cultivation, and an increase in the industrial plants, originating in the requirements of the industrial development of the Soviet Union.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

1934 PRODUCTION OF JUTE MILLS

The question of the production programme of the Indian Jute Mills Association for 1934 is, in our view, a matter of great importance to everyone interested in the jute trade. According to the agreement arrived at between the Association mills and the mills outside the Association, all the mills in the membership of the Association are working at the rate of 40 hours a week with 15 per cent of their total number of looms sealed. But according to clause 3 of the agreement dated January 21, 1933, the mills in the membership of the Association may increase their production by certain stages. The relative clause is reproduced for the information of our readers:

> "That notwithstanding the provisions of Clause 1 (a) of this agreement and notwithstanding anything elsewhere provided to the contrary, the mills in the membership of the Association shall be at liberty on a simple majority of the votes of members being recorded in favour thereof, (a) on giving six months notice of their intention to do so, to release from seal and put into operation not earlier than July 1, 1934, up to but not exceeding five per cent of the total complement of looms of each mill or mill company in the membership of the Association and (b) on giving three months' notice of their intention to do so, to release from seal and put into operation, by separate instalments which shall not exceed five per cent of the total complement of looms of each mill or mill company in the membership of the Association, the balance of the looms under seal; *provided always* that the periods of notice for the second and subsequent release of looms shall not run concurrently with the period of notice in respect of the first release of looms or with each other; *provided* also that whenever the Association shall release five per cent or any smaller percentage of the total number of looms in the membership of the Association as above provided, the Outside mills shall be entitled to increase their production to a proportionate extent by increasing their working hours or in such other manner as each individual Outside mill may decide it being understood however that there shall be in no circumstances an increase in productive machinery on the part of the Outside mills."

* * *

We understand that the Committee of the Jute Mills Association has, for some time past, been considering the question of increasing their production. No decision has so far been arrived at as it seems that a majority of the members are inclined to watch the effects of the tax that has been recently imposed in the U.S.A. on the consumption of hessian. American buyers of hessian are inclined to think that the imposition of this tax will not affect consumption to any appreciable extent. Many believe that any decrease in consumption due to tax will be more than offset by the expected increase in demand as a result of the improvement in the internal trade of the United States. But it seems that in spite of these assuring advices from our customers many mills favour watching the resulting effect of this tax before deciding to increase their production. They had a bitter and uncomfortable experience in 1929 when they decided to increase their production and had thereafter to beat a hasty and humiliating retreat. They would not like a repetition of that experience. Those in favour of putting into action a portion of the machinery now lying idle argue that, during the last year, taking advantage of the restriction voluntarily imposed by the Calcutta mills and the resulting improvement in prices, their competitors abroad have considerably increased their production and that they will, if matters continue as now, become serious rivals of the Calcutta industry in the markets served by this country. The increased shipments of raw jute to Europe are a proof of the increased activity of our competitors.

There has been another proposal placed before the Committee for their consideration. According to the present working agreement between the Association mills, the size of the looms that are to be sealed should of 40" reed space or over. A change can be effected in the kind of looms to be sealed if a majority of 75 per cent. of the total looms in membership of the Association is found in favour of the proposal. A certain group of mills is reported to have proposed that instead of sealing hessian producing looms, one-third of the looms that are to be sealed should be sacking looms so that there may be more production of hessian and less production of sacking. It is said in favour of this proposal that it is necessary to curtail the production of sacking and to lessen the competition in hessian by increasing production. There is no doubt that there is a lot to be said in favour of this proposal. The sacking bags market is an absolute monopoly of the Calcutta jute mills. The price of sacking at present leaves very little margin of profit to the jute mills. If the production of heavy goods is curtailed, there is bound to be considerable improvement in the price of bags, thereby increasing the margin of profit to the mills in that direction. By increasing the production of hessian, the present competition will be very much minimised. Owing to serious unemployment in European countries, the manufacturing concerns there are reported to be prepared to run their machinery even if it does not yield them any profit but just gives employment to a certain number of people. If the Calcutta mills continue to produce hessian at the present rate, this competition will continue to increase.

* * *

At the same time, the statistical position of hessian requires that considerable caution should be exercised before it is decided to increase production. Unless there is an improvement in demand from consuming centres, the production at the present rate should be sufficient to meet all possible demand. During 1933, there was a reduction of more than 3 crore yards in the stock of hessian in Calcutta; but as against this, the mills are now manufacturing more hessian than what they used to do in the beginning of 1933. The Association mills are producing about 30 lacs of yards more per week than what they were producing in the corresponding period last year. This is due to a number of mills producing hessian on sacking looms.

* * *

The general sentiment in business circles seems to be that trade in 1934 will show a decided improvement as compared with the previous year. The statistical position of hessian is such that with the slightest improvement in world demand, there is bound to be considerable scarcity of ready goods unless the mills either in Calcutta or elsewhere increase their production. At the same time, during the last four years, hopes of improved business have, so often, proved wrong that it will be a great mistake to increase production on the strength of more hopes. It is impossible to judge, with any degree of accuracy, the probable demand for jute manufactures. Those responsible for guiding the destiny of the jute mill industry of Calcutta are on the horns of a dilemma. Are they to allow any increase in world demand for jute goods to go to their competitors abroad? Or are they to prevent it by increasing their production? The task before the Committee of the Jute Mills Association is not so easy as most people imagine it to be. They have to watch the situation with utmost circumspection. The Committee should keep in close touch with the consuming centres and the activities of the competitors. If, at all, production has to be increased, it should be done by gradual stages so that there may not be any violent fluctuation in supply and demand while, at the same time, competitors should be prevented from stealing a march.

CONFESSION WITHOUT CONTRITION

The recent speeches of the Rt. Hon. V. S. Srinivasa Sastri on the White Paper form one of the few signs of animation in the paralytic limbs of Indian politics. This paralysis, as every one knows, was a foregone conclusion, the moment it was clear that the Liberals and the communalists failed to recognise, or act up to, the implications of the arrest of Mahatma Gandhi immediately after his return from the Second Round Table Conference. For the arrest clearly meant that the British Government were not prepared to explore the path of conciliating Gandhiji and the Congress; and as the latter would not readily acquiesce in unceremonious indifference to their opinions, they were in for relentless repression, culminating in the complete annihilation of the Congress. It was equally clear that, with the Congress out of the picture, the Government were not going to bother about the motley crowd of Moderates and communalists gathered at the Third Round Table Conference and jostled in and out of the various committees. For there is no reason to think that Gandhiji could not be brought round to agree, though tentatively, to what would satisfy the Liberal politicians. And surely, what they would not exchange for the priceless support of the Mahatma, the Government cannot throw away for the idle contentment of a few inconsequential individuals.

* * *

Thus the main lines of political development during the last two years, or rather the political stagnation of this period, could have been foretold on the last day of 1931. And it is this inevitability of the crisis that makes the problems of the way out more baffling of solution. The parties in the country may, perhaps, be divided into three, the communalists and the sectionalists, some of the sectionalists representing no more than their individual selves; the Liberals, comprising a few political pedants, erstwhile official luminaries and a number of Comfortable men seeking a riskless prominence in the public life

of a subject country; and lastly the Congressmen. The communalists have got nearly all they wanted; and in no sense can the key to the future be said to rest with them. The only help they can render to the nation is to capitulate of their own accord; and that is too much to expect of the best of us. The Congress, as observed already, has, as an organisation, been completely annihilated, though it is a different question that not much effort would be needed to rehabilitate it, if its practical programme is not too exacting on its members. In other words, the problem of the reconstruction of the Cngress is the problem of the reconstruction of its programme. Its ultimate aims have come to command the acceptance of one and all. But its immediate plan and policy would rest not so much on itself as on what the other parties and the general public are prepared to do. In the recent past, it had made a bold bid, without reference to others, without reference even to its own resources, tangible and otherwise. Strictly speaking, its real function is to act as the spearhead of the national movement, pitching the national aspiration somewhat higher than the immediately practicable, and exhorting people to more than what they are normally prepared for. So that it is idle to expect Congress to formulate a policy, so long as it is not known, on the one hand, what amount of freedom the Government are prepared to allow it, and on the other, what moral support or unmoral opposition the other parties will offer to it. It is a pity that there are many Congressmen who do not realise that Congress policy cannot be laid down till there is a definite inkling of how the other parties and the people as a whole will react to the promulgation of the While Paper constitution.

* * *

In such a situation, the Liberals acquire, from the standpoint of the student of politics, a peculiar importance. We say "from the standpoint of the student," advisedly. For we do not believe that in practical affairs they are going to count for much. It is just possible that Indian Liberalism will go the way of Liberalism in Britain, leaving a few survivals, less picturesque and in every way less impressive than Mr. Lloyd George and his colleagues. With the communal leaders enjoying the favour of the Government and the franchise of their special electorates, with the Congress ever enthroned in the hearts of the average Indian, it is more than doubtful if the Liberal will ever again get a real chance in Indian politics. It is not, therefore, from the standpoint of practical endeavour that the views of the Liberals call for notice. Their utterances are notable firstly, as a study of the psychology which sent Congress to its doom and landed the country to the mercy of unabashed communalism, and secondly, as a means of calculating the strength which the country can muster to thwart the imposition of a reactionary constitution, or rather of finding out whether we shall have in the future at least one weak point less in our defence.

* * *

It is in this hope that we turn to Mr. Sastri's speeches at Madras. Mr. Sastri has happily divided what he had to say into two convenient halves. First he came out in the role of a critic of the White Paper constitution and its authors—a somewhat strange role for one who did his best to strengthen its sponsors and weaken its opponents; and secondly, —a logical extension of these illogical turns—as the advocate of an abject policy of co-operation in the working of that constitution. Mr. Sastri spared no words in his denunciation of the White Paper, and, apparently, spared no pains in perfecting the phrasing of his Philippics against the British politicians. In refusing to believe that the White Paper is what India wants, Mr. Sastri respects his own intelligence. But he insults that of others when he says:

"The people in England, even the Diehard section, can no longer pretend that they have produced a White Paper Constitution that will satisfy any of India's progressive politicians. We have deprived them completely of that excuse."

* * *

It should be obvious to the meanest of Liberal intelligence that "to deprive them completely of that excuse" now is but to lock the stable after the horses are stolen. Mr. Sastri wants to suggest that what worried the anxious minds of British statesmen is whether the constitution that they have formulated would satisfy "India's progressives," that is, broadening the term sufficiently to embrace Mr. Sastri also. Every one knows that what matters to the British Government is not Mr. Sastri's blessings for the final scheme, but whether during the process of its formulation Mr. Sastri and his friends would weaken the hands of the powers by following Mr. Gandhi out of the Conference.

* * *

We have no blind or merely temperamental love of non-co-operation. We believe that the White Paper constitution is but an ill-wind that blows no one good. That it will not benefit Indian nationalism is almost axiomatic. That it will not serve any of Britain's more permanent interests may call for mental effort to recognise, but is equally indisputable. The communalists have everything to gain by it. It assures them of a sunshine, which will be so enchanting, that those, who will bask in it, will have little thought for the brevity of its duration. The White Paper is, assuredly, not the kind of effort, of which one might say "trial costs nothing." The bill of costs, should the White Paper be persisted in, might be more than all the parties put together can foot; for it has created new vested interests, conferred a prescriptive right on pretensions, which should never

DESHERGER SEAM COAL

(SUDI COLLIERY)

Certified by the Indian Selected Coal Grading Board and by the Government of India Test House, Calcutta.

have been allowed to exist, complicated nearly every problem of Indian politics, and ushered Indo-British relations into a phase of new acerbity and unprecedented misunderstanding.

* * *

The Liberals were in a particularly advantageous position to right the wrong. We may take it that the Right wing in the British Cabinet and the Congress in India are extremists with characteristic faith in the correctness of their views and their course of action.

* * *

No Liberal had any reason to believe that the White Paper constitution would ultimately be other than what it is. No Liberal can pretend that he did not foresee the vicious features and consequences of that constitution. And yet no Liberal was prepared to bring home to leading British Statesmen in the only way in which it would be brought home, the folly of their procedure. Mr. Sastri speaks of a lost battle; but it was a battle in which both parties fought on the same side; and no blow was struck; and if any it was at one who was nowhere in the arena.

* * *

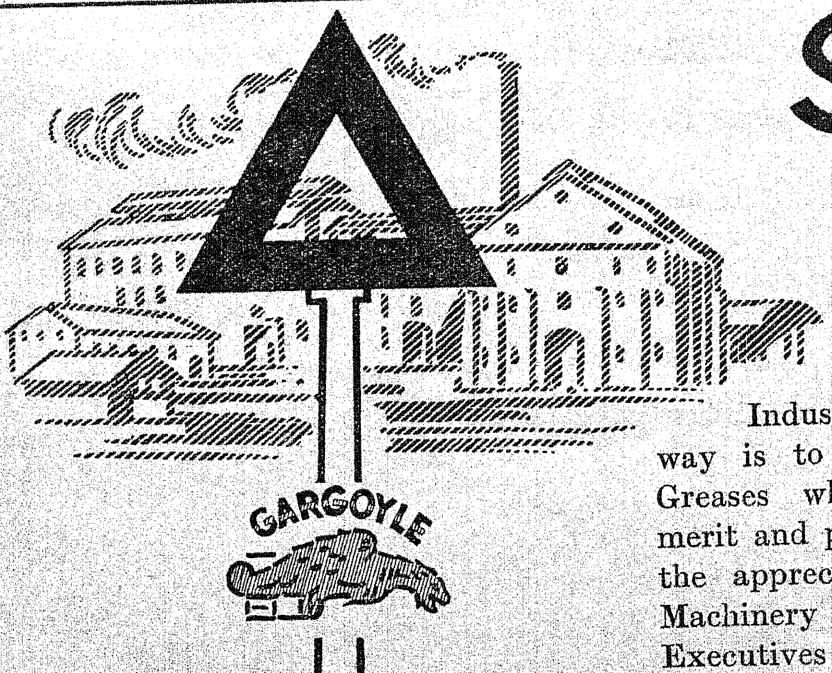
The first of Mr. Sastri's two speeches is thus a confession without contrition. One would have thought that when he condemns the White Paper scheme there would be an expression of regret for his part in making it possible. There is, in fact neither regret for the past, nor promise of reform in the future. Mr. Sastri's elaborate insistence on the personal, as distinct from party, responsibility for his views leads one to expect something with which the regiment of "leaders", which is the Liberal Party in this country, would not agree. But his second speech too, is a repetition of the old argument against non-co-operation.

* * *

It is perhaps too late in the day to recount the arguments against non-co-operation. What is required is neither the extenuation of the blunder of the Liberals nor a condemnation of the Congress. If Mr. Sastri's feelings towards the White Paper are shared by his Liberal colleagues all non-communal parties have a broad basis of agreement in the detestation of the constitution that awaits this country. And it ought to be the common purpose of such parties to force a revision of the White Paper scheme. When it comes to a definition of the next immediate objective Mr. Sastri is content to limit it to seeing "that the constitution is not as bad in effect as in potentiality". We must confess to the feeling that the difference between the two is not large enough. If the past record and the well-known psychology of Liberals are any clue, Mr. Sastri's objective will set the country on the inclined plane of tame acquiescence in the White Paper constitution which is fraught with the gravest evil to both the countries and all the interests concerned. What is required is a faithful exploration of a common ground of action for all non-communal parties with the definite objective of forcing the earliest humanly possible revision of the constitution. Let there be no repetition of the blunders which ended with putting, to use Mr. Sastri's words, a "hideous, grimacing anthropoid" in the place of "a smiling auspicious god". Mr. Sastri, we hope, is still a sufficiently devout Hindu to believe in the portents of such an inauspicious beginning. The Indian constitution was never as clay in his hands. And let him not infuriate the presiding deity of success and obstacle by continuing to mistake granite for clay.

INDIA AND AMERICA AND BRITAIN

In our last issue, we suggested that, in the plans of recovery that have to be adopted, it should be possible for America and India to act in unison. In making this proposal, we did not have the slightest hope that the authorities are likely to avail themselves of the hint proffered by us. In all these matters, this country has to be content with a policy



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike. ∴ ∵ ∵

that whatever is good for Britain is good for India and that as and when Britain takes any action, India, too, may take action on similar lines if she is permitted. The conspicuous feature of those in charge of the destiny of Britain's finances is a half-concealed antipathy of the American experiment. In the speeches already delivered by some of the Chairmen of the Big Five of London, this antipathy has been given expression to. There is, therefore, no hope that any active steps will be taken by India towards the adumbration of a clear and definite plan for the solution of the widely prevalent distress. There are abundant indications that considerable improvement has taken place in Britain's finance, trade, industry and budgetary position. How far the better outlook is due to Britain's intrinsic vitality and how far it is due to the enfeebled vitality of other countries is a matter that requires careful consideration. In any case, it is difficult to say whether such improvement as has already occurred will prove to be of a lasting character, or will be only transient.

* * *

Be this as it may, there has not been any change for the better in Indian economy. Internal trade is better only to a very, very slight extent. Our export trade continues to make a poor showing. The coal industry is in doldrums as ever. The cotton mill industry is yet to turn the corner. The tea industry looks like having less difficult times but it is too early to "shout". The margin in the jute mill industry has not widened to any appreciable extent and, as is shown elsewhere in this issue, those guiding this industry are now up against serious problems for which solution will not be an easy matter. The sugar industry is the only bright spot; but what with the nightmare of overcrowding and what with the recent havoc inflicted by the earthquake in Behar, those engaged in the manufacture of sugar, while quite satisfied with the present position, cannot be free from misgivings as to the future. The Indian capital market for industrial ventures has remained as dead as mutton for over a decade. This is the full story of India's economy, comprising finance, trade and industry. It is only in regard to Government finances that there has been a miraculous change. Even here, the giltedge market has not recovered from the cruel blow that was administered last Spring. Such favourable features as are there (like the smooth functioning of the ways and means machinery both in India and in London, plentiful remittances to the Secretary of State, freedom from exchange troubles, cheap borrowing in London, borrowing in India on satisfactory terms) are mainly due to the colossal gold shipments that have taken place and to their continuance in some measure upto the present date. As we have stated more than once, the very comfort of the Government is due to the gold exports; and gold exports are an index to the very distress of the population.

* * *

However, because of the real improvement that has taken place in Britain and because of the freedom from the annoying problems of the earlier years which the authorities in India have enjoyed, the latter have lulled themselves into a false security that all is well with India and that progress in economic wellbeing in this country is proceeding apace with the progress in the economic wellbeing of Britain. So long as this mentality is there, there will be no incentive for the Government of India to take any action, as suggested by us, in collaboration with America. But they will do well to remember Mr. H. G. Well's exhortation that we should show a better co-operation with the American experiment and a better appreciation of the Russian experiment. A prophet and seer like H. G. Wells is any day a truer friend and safer guide.

SALT DUTY CONTROVERSY

K. A. S. writes:

Regarding the issues involved in the present controversy over the salt duty, may I, for the information of the ignorant, be permitted to make the following observations:

1. The Tariff Board, after very careful consideration of Aden's position in relation to India's salt supply, opined that, from the national point of view, there was no ground to discriminate between Aden and the Indian sources of supply.

2. On the question of protection, so far as Indian Sea-borne salt was concerned, the Tariff Board reported as follows:—

> "From the economic point of view there is no case for protection in the proper sense of the term so far as Indian seaborne salt is concerned. The salt

The NEW INDIA ASSURANCE Co Ltd

CREATES ANOTHER RECORD

As a result of the First Valuation made as at 31-3-1933, on a 4% interest basis, the Company has declared a Simple Reversionary Bonus of Rs. 15 per Rs. 1,000 per annum on Whole-Life and Whole-Life Limited Payments policies and of Rs. 10 per Rs. 1,000 per annum on Endowment Assurance Policies.

The Company has further decided to grant a rebate of 2½% on premiums paid annually. This concession has been extended to old policyholders of the Company also.

Ask for a copy of the Life Prospectus and you will be satisfied with the most liberal conditions of our Policies.

The Company's revised agency terms provide for higher renewal commission and continuance of renewal commission after death on certain conditions.

NOW is the time for you to be interested in the Company either as a Policyholder or as an Agent.

The NEW INDIA Assurance Company, Ltd.

(*India's largest Company transacting all classes of assurance*).

100, CLIVE STREET, CALCUTTA.

works at Aden have for many years faced foreign competition unaided and since we have found that these works form part of the Indian industry, no claim for protection of the industry as a whole can be substantiated. Further even if the works at Aden are excluded from consideration and salt manufacture at Karachi and Okha is regarded as a nascent industry, assistance on strictly economic grounds cannot be justified. These works on the whole possess no advantage over works situated on the Red Sea Coast in respect of natural facilities for the production of salt including freight and in consequence no economies may ultimately be expected in the cost of salt to the consumer in Bengal such as would justify a case for protection on ordinary economic grounds."

* * *

3. So far as the international sources of supply were concerned, the Tariff Board opined that it would be in the national interest if Bengal could be supplied by railborne salt.

* * *

4. If Aden had been classed as "foreign", there would have been no Protection Act. It was the fact that Aden could defeat any attempt on the part of foreign sources to starve the market by deliberately withholding shipments, that rendered the measure feasible.

* * *

5. It is stated that the trade of Chittagong has suffered by Aden salt having been given protection. The suggestions contained in this statement are, presumably, (a) that, without protection, Aden would have shipped less to Chittagong than she has done since the protection was introduced and (b) that certain foreign interests—notably Port Said and Ras Hafun—would have participated in the trade to a larger extent and thereby contributed more revenue to the port than they have been able to do. As no figures have been furnished to substantiate the alleged "greed" on Aden's part, I feel I need only state that the total of Aden's shipments to Chittagong for the three years 1928-30 exceeds that for the three years 1931-33.

* * *

6. Aden has been accused of profiteering. The term "profiteering" suggests selling at high prices. If this had been the case, "high prices" should have enabled foreign interests to compete.

* * *

7. An appeal has been made to the Salt Committee of the Assembly to review the whole matter *having in view the welfare of the consumer.* I should like to know in what way the imposition of an extra tax of Rs. 15-10 per 100 maunds on Aden salt would benefit the consumer.

RAILWAYS AND EARTHQUAKE

Mr. P. R. Rau, who will be announcing the Railway Budget in another three weeks, must now be having all his attention taken up in incorporating all those modifications that are necessary on account of the capital expenditure that will have to be incurred by the railways for repairing earthquake damages. The programme for 1934-35 was fixed up at the last meeting of the Standing Finance Committee for Railways. An emergency has now arisen for the revision and amplification of the programme then settled. As the Assembly is now in session in Delhi, it might be possible for Mr. Rau to have an emergency meeting of the Standing Finance Committee and get the approval for the enlarged capital programme. In a sense it is good that the railways have this opportunity of undertaking further capital works. Owing to the perplexing factors pertaining to rail-*versus*-road competition, the opening of new lines was a problem that had begun to present great difficulties. Try as they might, the Railway authorities could not bring up their capital programme to a figure equalling the amount set apart for depreciation. One of the directions in which relief for the present economic distress is to be found is the undertaking of new schemes by the railways. Conditions have materially changed since the last hectic programme of 1924-30. In such a situation when new avenues are found to be scarce, the relief measures that have perforce to be undertaken by the railways may have the effect of giving a fillip to the industries dependent upon the railways and of reducing the tragedy of unemployment.

Engaged on a brochure dealing with the steel industry in India, I have had to spend all my spare week-ends in Jamshedpur that I may the better understand its atmosphere and appreciate its activities. I made one such visit last week, availing myself of the free holidays. Parenthetically I may recommend to my readers a visit to the steel city as one of the most enjoyable week-end trips. The climate is excellent. There is a first-rate hotel in which, to our pleasant relief, we find ourselves provided with modern sanitary arrangements. The roads are clean and free from dust ; and it is a great recreation to walk miles on miles over the undulating country with its lovely views, pleasant landscape and clear and crisp air. You leave Calcutta on a Saturday evening and get into your hotel at Jamshedpur at 9.30. You spend the whole of Sunday and take the train at midnight, arriving in Calcutta early on Monday morning. My last visit to Jamshedpur was responsible for bringing home to me the horrors of the tragedy which the earthquake has inflicted on Behar and the urgency of relief, any amount of relief and relief in all possible ways. The Tata Iron and Steel Company received an emergent request from the Government for doing all that they could for relief operations. And the men in Jamshedpur set about taking the necessary measures with a thoroughness and generosity which reminded me powerfully of the spacious traditions which the earlier generation of the Tatas had taught us to associate with the plans and actions of their house.

* * *

Within an hour of the receipt of the request, the authorities in Jamshedpur had settled full details of the plan which they, from the point of view of their resources, could undertake and which, from the point of view of the ruined towns, would prove to be of the greatest and timliest assistance. The plan, in simple terms, was to rush to Monghyr—which was the affected place most immediately accessible by through train route—a large quantity of corrugated iron sheets for the making of temporary huts, available spare supplies of rice in the town, bolts and nuts and other accessories for building huts, senior officers who could supervise the construction work and who could otherwise think quickly and plan efficiently for all possible contingencies, and a band of mistris, fitters and mechanics. The iron sheets which the Tatas wanted to despatch amounted to 120 tons ; they wished to send also over 100 tons of rice. And then there were the miscellaneous knick-knacks. All this could not be transhipped without recourse to a special train. Overnight arrangements for a special train were fixed up ; the materials and men were at the station betimes ; and by nine in the morning, everything was ready for giving the line clear for the train. A few doctors headed by the chief medical officer and adequate supplies of medical outfit formed part of the relief equipment.

The relief train reached Monghyr early in the morning of Sunday ; and by evening, the relief party had set up 150 yards of the "ten huts." A hospital was set up in a tent. Rice was issued on the authorisation of the local officials. The relief programme of Tatas should have cost them anything like Rs. 50,000 (Rs. 20,000 in the shape of sheets, Rs. 10,000 in rice, Rs. 10,000 in accessories and Rs. 10,000 in other expenses). But it is not the expenditure that counts, but the spirit in which the offer was made and the energy with which the plan was executed. The trustees of Sir Dorab Tata's estate showed equal alacrity and wired half a lakh of rupees to the Viceroy's Fund. Lady Ratan Tata made, from her funds, a contribution of Rs. 10,000. He that giveth quick giveth twice. He that giveth with good grace giveth a hundredfold. As I watched the relief preparations in Jamshedpur, I was struck at once by the stupendous calamity that has befallen Behar and the stupendous occasion that this calamity afforded other provinces to demonstrate a full measure of their practical sympathy and genuine feeling towards one in great affliction and distress. I realised, in the words of Poet Rabindranath Tagore, that "it is a calamity which transcends geographical limits and makes its appeal to the universal man."

* * *

The loss of life and property is too terrible for words. In the words of the Governor of Behar, so many persons have lost their all that they must be helped to make a fresh start in life. Town dwellers find themselves without home or furniture or utensils, bereaved and crushed in spirit by the death of one or more of their near and dear ones. Agriculturists are in an equally sad plight. There have already been two or three floods in Behar. The havoc caused on the present occasion is verily the last straw on the camel's back. The tremors and shifts in the underground regions caused the water in the Ganges near-about Patna to dry up and resulted in fierce geysers and unwanted fountains throwing up turgid floods in all parts of the province. The deposit of saline and sand erupted from geysers and fissures may have greatly affected the soil in the fields and until the deposit is removed the notable fertility of soil in North Behar may deteriorate. The Government have suffered enormous loss through the damages to colleges, hospitals, courts, offices, jails, residences, roads, bridges, embankments, etc. District boards and municipalities have likewise to face heavy bills for repairing destroyed bridges, broken culverts, obliterated roads and wrecked buildings. The Bengal North-Western Rail-

way will have to incur a heavy capital expenditure for restoring the traffic to normal conditions. The East Indian Railway will need more than Rs. 50 lakhs to restore Jamalpur. The newsprung sugar industry is also in distress.

* * *

In regard to the economic aspects of the misfortune of the sugar factories, His Excellency said :

> "Again the destruction of sugar factories reacts disastrously upon agriculture. Where factories cannot work the ryot has lost his market for what is now his most profitable crop from which he earns and gets money for such things as he must buy. The three districts worst affected contain 20,00,000 acres under sugarcane and at least half of the mills which took produce cannot function. The problem of saving something from the wreckage of cane harvest is one of the most urgent for consideration."

On a review of the devastation caused by the earthquake, two definite problems emerge. The first deals with the devising of plans for immediate relief and the second with the task of reconstruction. It is in regard to the first question that the generous public of the other provinces could make a definite and valuable contribution. In regard to the second the sums required for reconstruction would be in the neighbourhood of over Rs. 2 crores, and will have to be found by the issue of loans partly on the credit of the Behar Government and mostly by the Central Government. The relief funds started in the various centres of India have elicited, thank God, generous and spontaneous response. The Mayor of Calcutta has achieved striking success by mobilising the support of all the varied sections in Calcutta including the European commercial community. The latter have donated Rs. ¼ lakh. The East India Jute Association is to be congratulated on its splendid contribution of another Rs. ¼ lakh. Next to the Tata Iron and Steel Company and the Trustees of Sir Dorab Tata, the East India Jute Association is the largest single donor. The cotton brokers of Bombay have bestirred themselves and made a preliminary collection of Rs. ¼ lakh. Ahemedabad millowners have raised funds of a like amount.

* * *

It is extremely creditable that nearly Rs. 3 lakhs have thus been raised by voluntary contributions in less than a fortnight. But Rs. 3 lakhs is but a drop in the ocean in relation to the colossal needs for relief. In this connection the example of Allianz Und Stuttgarter in contributing Rs. 5,000 is worthy of emulation by all the insurance companies doing business in India and by the various business houses which have contact with or concern in Behar. From the point of view of minerals, Behar is a province which has offered the fullest possibilities of exploitation. But Behar itself has made but little gain in a direct way from the mineral resources thus exploited. Most of the head offices of the mines situated in Behar are located in Bombay or Calcutta. It is, therefore, all the more incumbent upon such concerns to proffer help in the present emergency. The sugar industry has likewise a great debt of gratitude to pay to Behar. I know that a few of the mills are themselves in difficulties owing to the damages caused by the earthquake. But such mills as have been spared from this calamity should take a prominent part in relief operations both indirectly by way of donations and directly by way of supervising and organising relief work.

If only the public and the State would rise to the full height, the very calamity of Behar may prove to be a powerful cementing influence in these days of dissension and may open out opportunities for the launching of public work schemes of far-reaching effect. It was the big fire of London that was responsible for the re-fashioning of that city on a cleaner basis and with finer equipment. It was the plague of Bombay that accounted for the partial disappearance of untidy slums and for the greater attention to principles of santiation in the building of the extensions. Many towns like Salem and Coimbatore in South India have developed new areas on wholesome lines just because of the havoc of plague in the dirtier and older towns. If, therefore, the plan of reconstruction is undertaken not in a haphazard but on a deliberate and far-seeing plan, it may well result in a new and better Behar. It is this objective which should be kept in view by the State and which should engage the entire affection and fervent devotion of the public. When distress is so great throughout the country, and when unemployment prevails on such a large scale, the public work schemes which have been necessitated by the earthquake may turn out to be a solvent of distress and an opportunity for more employment. The earthquake has, in all conscience, been a terrible curse. It may yet be up to us to turn it into a blessing in disguise.

* * *

In Behar itself, there are magnates like the Maharajadhiraj of Darbhanga who are in a position to make substantial contributions. The Maharajadhiraj has himself suffered heavy losses through the collapse and wrecking of a number of his palaces and public buildings. It is to me personally a matter of poignant interest that the office in which I used to work in the Anand Bagh Palace is in ruins. Few Maharajas have spent such large sums in beautiful palaces and imposing temples as the old Maharajadhiraj did. Building was a hobby with him. Darbhanga could boast of no less than five palaces, each of fine architecture and each surrounded by gardens well laid out. The palace grounds were a thing of beauty and joy. As though not content with the numerous palaces in the principal town of his estate, the old Maharaja raised a dream of a palace in Rajnagar and spent another Rs. ½ crore in offices. The Kali Temple in Rajnagar caused him fully Rs. 10 lakhs. Anything like Rs. 2 crores would be the estimate of the sums which Darbhanga Raj had spent on its palaces, offices and temples. To repair them and to renovate them might mean an outlay of a crore. Besides this, the Maharaja has also to finance the relief operations in the affected areas in his far-flung estate. It would, therefore, be easy to understand that the call on his purse on the present occasion for his own immediate requirements would be substantial; but there can be no doubt that amongst the landholders of India, the Maharajadhiraj of Darbhanga is far and out the richest, able to command crores at a moment's notice. Even taking Ruling Princes into account, I wonder if any other prince than the Nizam and Scindia is richer than the Maharaja of Darbhanga. The traditions of Darbhanga house are such that we could count on apt munificence for worthy objects. Sir James Sifton is sure to receive help of all kinds from the young Maharaja who has already given ample proof of a warm heart, generous impulses and good discrimination in charity.

THE GATEWAY OF INDIA

Bombay, January, 23.

The budget debates of the Bombay Municipal Corporation bring out the fact that financial stringency destroys in corporations, as in individuals, a general sense of proportion. There was little or no evidence in the debates of that sense of high finance which, while not disdaining small savings here and there, would only look out for big solutions to big problems. It is true that the Corporation is in a somewhat tight corner in which the scope for high finance is extremely limited. The intolerable weight of debt charges incurred alike by the Corporation and its unwelcome bed-fellow, the Improvement Trust, take away a big slice of the available revenue. In such circumstances, that inordinately irritating phrase, "cutting the coat to suit the cloth" has, it must be said, some relevence. But too many people seem to regard a budget deficit as an occasion for airing financial trite, worn-out commonplaces and irrelevant platitudes. Granted that the immediate purpose is to secure a balanced budget, is it to be presumed, without a moment's thought, that any income is worth trying for and any expenditure a matter for relentless axing? Surely, every deficit big or small, is not a signal for wiping out all the ends of communal life. If civic amenities and the subservance of a common cultural life are to go by the board, every time revenue shows a short fall, it were well that the community is once and for all told not to expect anything from the Municipality, which would hereafter be content with a little taxation only for paying off the interest charges on past debts.

What a comment on the financial wisdom of the City Fathers that to bring about a balanced budget they cannot think of anything except to cut primary education and to tap the toddy trees! The Government, as is their wont, have set the ball in motion by making out in a reply to a demand from the corporation for sources of additional revenue, that the Corporation has no claim to any, when it has of its own accord foregone the income available from allowing its trees to be tapped for toddy. And this has furnished the occasion for some of our financial purists to demand that the relevant resolution of the Corporation be rescinded. The supporters of the Government's suggestion, no doubt, seek to strengthen their case by financial purism and orthodoxy by a denunciation of sentiment and by an appeal for businesslike outlook on things. Those, who have suggested the expenditure on primary education as an avenue of retrenchment, have, it must be said, been a little more cautious and discreet in their arguments. They have contended, on the one hand, that the lack of administrative control over the Schools Committee has been conducive to a laxity in expenditure and that the Corporation has during these years gone beyond its avowed purpose of imparting primary education and has endeavoured to provide in certain parts of the city secondary education as well. Against the demand for the imposition of proper administrative control and supervision, no one can have anything to say. Nor in the present circumstances of municipal finance can one demur to the suggestion that the Corporation should seek to effect such economies as may be possible by abandoning its attempt to provide secondary education and confining itself to the provision of the three R's for all classes of the city's population. But placed together, the demand for cut in primary education and the resumption of liquor traffic signify a sad loss of idealism in the Municipal Corporation, for which the saving of a pittance, far from being a compensation, is actually an irritation. In fairness to the Municipality as a whole it must be said that these suggestions have not met with general acceptance and that at the time of writing, the debates have not come to a close.

"WATCHMAN"

(*Continued from page 183*)

cent. the quotas for a very abundant list of goods. The official statement issued from the Foreign Office states that the situation will be further examined by His Majesty's Government in the United Kingdom as soon as the details of the forthcoming French action are known.

Britain has followed up this win in the first round with a good score in the second. The French Government, it is understood, have now agreed that the 4 per cent. import tax on semi-manufactured and manufactured articles respectively will shortly be reduced to 2 per cent.

While satisfaction is expressed in British circles, at the favourable turn of events, there was also some surprise at the quick response of France to British protests. Some reports say that the new gesture is only temporary and that the respite will last for about three months until the new Anglo-French trade agreement is arrived at. It is rather difficult to see the French objective in applying these cuts in the quotas and bargaining for concessions. The observations of the *Financial News* on this question are piquant. "Such a method, when pushed to the extremes is merely futile. It may be employed to some extent when the treatment of foreign goods is generous. But in the end, the chief factor affecting any trade negotiations must be the absolute level of import restrictions and the absolute level of trade—not the comparison of present levels with what they were a month, a year or five years before."

The English Life Assurance Business in France

The reports of the working of the British Life Assurance Companies show a very satisfactory increase over the figure for the previous year. The total amount of new business writttn by 34 British companies representing over 70 per cent. of the aggregate amount written during any year was upwards of £122 millions in 1933. This amount shows an increase of over 12 per cent. on the corresponding amount written in 1932. It is reported that a considerable portion of this new increase in business is due to the moneys placed with them for investment rather than for life assurance purposes. The low yield that is obtained in the giltedge market has diverted the investors to more profitable channels for their surplus funds; and in this respect certain of the schemes which the life assurance companies have to offer have met with practical and substantial success. The complete absence of the market prices in influencing the value of the life assurance business has givn an additional advantage towards encouraging life assurance policies as an attractive form of investment.

OLYMPUS

New Delhi January 24.

How quickly has a month passed and our legislators back again to raise dust. Their ranks remain as depleted as before though party allegiances have undergone a remarkable change.

* * *

The Democrats who shone as the real 'opposition' during the Reserve Bank Debates have been well-rewarded and emerge this session as the second largest group. Unfortunately their leader is ill and their two top men, Mr. B. R. Puri and Mr. Jaganath Aggarwal, being busy lawyers, are absent. But Sir Shanmukham Chetty has given them their due by nominating their leader Mr. Neogy, to the panel of Chairman.

* * *

Raja Bahadur Krishnamacharya of the Centre Party has taken the third position. He looked uncomfortable and was casting his eyes on the seat of Sir Abdur Rahim. He has developed an ambition to become the leader of the Opposition. He would like to rope in the United India group of Mr. Yamin Khan but he may have serious odds against him. There are a number of his followers, men like Mr. Brij Kishore, Mr. S. R. Pundit, Mr. M. C. Rajah and Mr. Gupteshwar Singh, who do not like to join the chief opposition group. And, if they fall out, the Raja Bahadur's ambition will remain unrealised.

* * *

The leader of the Centre Party has a hard nut to crack in his Pro-Leader, Mr. Sarma.The former seeks to assimilate Mr. Yamin Khan and his remnant by the offer of the Deputy Leadership to the routed leader of a disrupted party. A meeting, which was called for the latter half of this week, has been postponed to early next week, in order that decision one way or other might be taken after Mr. Sarma's arrival. The Raja Bahadur may win Mr. Yamin Khan and his slender support only at the cost of losing larger number of his present partymen.

* * *

Sir Hari Singh Gour was a pathetic figure. He kept mostly in the lobby and hardly occupied his seat. "The Leader of the Opposition" that he was, he is to-day reduced to a miserable fourth-rank party opposition. Oh! what a fall was there, my countrymen! Sir Hari Singh was so bucked up about his former status that in the London hotel where he was staying he is said to have described himself in the name plate thus: "Opposition Leader of India's Parliament". Even his erstwhile Deputy, Mr. C. S. Ranga Iyer, has shown willingness to join the Centre Party, because he does not now believe in "Opposing for the sake of Opposition".

* * *

The only comfortable seats seemed to be those occupied by Sir Abdur Rahim and Sir Leslie Hudson, they combine talent and discipline which make their parties solid.

* * *

The session which commenced to-day promises interesting debates, and endless scope for 'oratory'. Every measure that will come up for discussion gives ample material for a wordy warfare. And our legislators will not let their opportunities slip.

* * *

Government members are ready to meet the opposition. Sir Harry Haig will have a tough time with the Indian States Protection Bill. He has drafted in Mr. Glancy for helping him in piloting the measure.

Sir Joseph Bhore will have a very taxing time, what with his defence of the Cotton Agreement and with his plea for safeguarding the various industries against unfair competition from Japan, and plea for honouring the Mody-Lees Pact. He knows that his agreement with Japan is not liked by the European commercial interests and is hated by Mr. Mody's group in Bombay. So he will endeavor to placate Lancashire and thus silence their friends in India.

* * *

Sir George Schuster has still to negotiate the Imperial Bank Bill and his last budget will not be so rosy as to win him the cheers which an outgoing Finance Member likes to receive on the eve of laying down his office. He has asked Mr. Taylor to join him in meeting the attacks of the Opposition.

* * *

Sir Frank Noyce will have to deliver many a speech on his Factories Bill and on the Payment of Wages Bill. He has a very capable adviser in Mr. Clow and thinks himself well-equipped to meet the opposition from Mr. Joshi and Mr. Matin Chaudhury.

* * *

Mr. P. R. Rau will bear the brunt of attack on the Railway Budget and fears little trouble as he proposes to make no changes in the existing position. Mr. Tottenham has to answer for the Army especially as the Commander-in-Chief has ceased to come to the lower house after the bitter experience his predecessor had with President Patel which led to Lord Irwin's intervention and an apology from Field Marshal Birdwood.

* * *

Sir Fazli Hussain will, as usual, put in his appearance rarely. He believes that on matters in which he cannot give a lead to the Muslim bloc, he does better by keeping away from the Assembly. His departmental affairs are safe in the capable hands of Mr. G. S. Bajpai who is ever ready to offer explanation and provide an answer to any enquiry.

* * *

Sir B. L. Mitter 'leads' the House. His chief task is to announce "business for the next week." There are no legal measures of any importance on the anvil and his assistance may be sought only on the Indian States Protection Bill especially as the legal pharseology of the Bill has been criticised by some local governments.

* * *

The President of the Assembly, Sir Shanmukham Chetty, has no intention to vacate the chair during the life of the present Assembly and if he accepts the senior Deputy Governorship of the Reserve Bank, that will be after next Autumn. In the meantime, he may take the opportunity of visiting London on a holiday and getting refreshed before launching either on the task of building up the new Reserve Bank or of preparing himself for the general election and for re-election to the chair of the Assembly.

* * *

The Viceroy intends to leave the Assembly alone for the present. He has nothing new to say, after his speeches in Calcutta and would rather wait for an address at the close of the session when he can say au revoir before his departure on leave.

* * *

The Council of State does not meet till February 8 while the Princes Chamber does not meet at all this winter. The bigger princes have gone out because they are swamped by the voting of the smaller States; the smaller States threaten to keep away and prevent quorum in the Chamber if their powers are in any way curtailed! So the happy solution has been found and the Chamber has been given an extra year's holiday.

* * *

Enough for the week to indicate what we may look forward to in the coming quarter in this Home of the Olympians.

"HILL-BIRD."

SOUTH INDIA

(From Our Correspondent)

Madras, January 24.

On the question of the basis of land revenue assessment, the Government have been lured into the open. They have, perhaps, had an uneasy conscience over their recent decision. And they have sought to justify themselves by an enunciation of the principles which, they claim, have been followed in the assessment of revenue and remission therefrom. The critics of the Government find it possible to attack them on two different fronts, one that of the equity of the principles enunciated and the other, the faithfulness with which those principles have been applied in actual policy. In the G.O. issued early in the month, the Government have referred to two outstanding principles that govern any land revenue settlement. The first is that the assessment is on the land itself and does not depend upon the kind of crop grown, except where water rates are levied or the caste and circumstances of the person who holds the land. The second principle is that the claim of the State is to a share of the net produce. The Government claim that the settlement officer gives a most moderate estimate of the next produce after making a series of "generous concessions" and "allowances" of various kinds. The object of these settlements is the revision of the amount of money value of this "net produce." Such revision is necessary and equitable, because the Government are in their view entitled to a share in the improvement resulting from circumstances, which cannot be either foreseen or whose exact incidence cannot be appraised beforehand.

It will be seen that these remissions would be untenable, except on the basis that land revenue is not a tax but a rent and that the State is entitled to a share of the unearned income on land. Though the controversy as to whether land revenue in India is a tax or a rent is probably as old as British rule itself, there should, with the growing imminence of socialism in many parts of the world, be less enthusiasm for the idea of the landlordship of the State than there should be formerly. In its comments on this question, the *Hindu*, for instance, observes that "there were some stalwart defenders of the land revenue policy in those days who said that it was a near approach to that state ownership of the land on behalf of the community which to-day would be deemed part of the solialist creed." But the *Hindu* bases its criticism of this view more on the inconsistencies and anomalies which it would lead to than on any religious abhorrence of the Socialist creed. But it may be pointed out in passing that this attitude to land, though doubtless a part of socialism, was shared by avowed individualists even of the early 19th century and that the distinction between land and other instrument of production was well accepted amongst the earlier economists. Perhaps, there is now a kind of revulsion of feeling amongst the governments of the world. At any rate, the Government of Madras has nowhere explicitly reiterated the theory of the state ownership of land or that land revenue is only a rent.

Leaving theory aside—and discussions of theory are notoriously fruitless in this domain of hopeless confusion of principle and practice,—it seems that the workers and investors in land alone should be subject to this periodical shearing by the State in respect of their income from land.

For the present one might seek to create and retain a common ground of discussion by admitting, if only for argument's sake, the validity of the principles enunciated and examine their actual working. If the State is really entitled to a share of the net profits, it is necessary to ask what are the expenses that have to be deducted from the gross income from land. Happily, the Government themselves have furnished the answer for this question and given below the main heads under which the deductions have to be made.

It is clearly impolitic of government to have enumerated so many heads. From even a superficial view, it will be seen that, if the settlement is to be equitable, the officers concerned have to be, besides being experts in their official work, among the pick of the world's economists. One might go further and say that the world's best economists, amongst whom one cannot expect to find an Indian, would be too unfamiliar with the peculiar conditions of India to be able to make a correct assessment of the costs involved. In a country in which agriculture is not only carried on under the most primitive conditions, but is also a kind of cottage industry in which all the members of a family from the oldest to the youngest take a hand at all odd hours and in different seasons of the year, one is left wondering on what basis of computation the settlement officers have used to be able to claim that the principles and criteria enunciated by the Government in the recent G. O. have been kept up in the spirit as well as in the letter. Who can say that all the labour, which a family, which owns and farms a piece of land, puts into the task of cultivation, harvesting and marketing, is adequately evaluated and allowed for in the revenue that is assessed on it?

Not content with enunciating these principles of of doubtful validity, the Government have gone to the length of suggesting that in former years they had not extracted from the ryot the full amount of what is due to them, that in making enhancements they have lightened the incidence of such enhancements by bringing about graduated increases. So much as to say that the occasion is one for gratitude rather than sullen resentment and recrimination.

In all this, it is curious that there has been no attempt to correlate the land revenue policy with the general taxation or the general economic system in the country. In a country, in which agricultural production is far and out the largest part or very nearly the whole of the annual production of wealth, it is farcical to suggest, on the assumption of a state ownership of land or a similarly fantastic theory, that the State is entitled to take away half the net produce of land. For that would mean that Government is eternally out for its pound of flesh, without any regard for the consequences of their action on the conditions of living.

This indifference to what may be called the human aspect of the question has caused a great deal of bitterness which has found expression in the speeches and writings of prominent leaders. Mr. N. Subba Rao, for instance, points out that the Government only "deal with the land and not with the ryot. The Government must take their share according to the settlement calculations and need not take into account his economic condition, whether there is enough left for his maintenance." Mr. T. R. Venkatarama Sastri, presiding at the Mannargudi Mirasdars' Conference, arraigned "those high-placed people who seem to expect the agriculturists to live on half the income in order to enable the Government to carry on with double expenditure" as the "direct descendants of those who made the French Revolution both possible and inevitable." Mr. Satyamurthi in a similar function at another mofussil centre appealed to the Ministers not to acquiesce in the high-handed doings of the Reserved Half and to agitate, on pain of losing the confidence of the Legislative Council, for justice being done to the ryot.

ECONOMIC REVIVAL THROUGH CURRENCY REFORM

The following is a condensed version of Sir Montagu Webb's striking address to a large audience at the Indian Economic Institute, Calcutta, on Thursday, January 18, 1934, with Mr. Amritlal Ojha, President of the Indian Chamber of Commerce in the chair. Sir Montagu opened with congratulations to Mr. Nalini Ranjan Sarker to whose foresight and patriotic energy, Bengal owed the Economic Institute. Sir Montagu continued :

Writing and money are the two greatest inventions of the human brain—the language of intelligence, the language of production, of trade, of progress. The invention of money made possible the development of the Division of Labour to the degree in which we see it in operation to-day. Modern civilisation is only possible by aid of this great invention, money. Should money fail to function properly, then civilisation itself would be in jeopardy. It behoves every intelligent man and woman, therefore, to give the theoretical basis and practical use of this wonderful contrivance, money, their closest study.

Without allowing our imagination to conjure up prehistoric pictures of the first origin of money, let us use our own faculties and experiences, and let us define for ourselves the present day functions of money. One of the things which differentiates man from all other creatures is that he is a tool-using animal. And, when buying and selling, the tool, which he employs, is money. Indeed, in the conditions in which we are living to-day, it is impossible to obtain what we require without money. Money's first function then is to purchase goods, services and rights. It is, in fact, our Purchasing Tool.

A second function of money is to enable us to measure values, not exactly as a maund measures weight; or a yard measures length; but still a measure. If we are willing to give two rupees for this, and four rupees for that, we know at once that, in *our* minds, *this* is only half as valuable as that. Thus, money serves as a common Measure of Value.

Money has two other functions, as a moment's reflection shows us. If we live in the country, many miles from a railway, and still further from any reliable banker (and most of the populations of the East and of the tropics are so situated), then we can put our money in a box; or hide it somewhere in the house; or bury it in the ground till such time as we want to use it. In this way, money serves as a Reserve or Store of Wealth.

And lastly, if we want to borrow from, or to lend to, any person; or if we enter upon any other transaction readjustable at some future date, the terms in which the readjustment is ordinarily recorded, and finally settled, are terms of money. In short, money serves as a Standard of Deferred Payments.

So now we see the four functions of money. It serves as :

(1) A Purchasing Tool;
(2) A Measure of Value;
(3) A Store of Wealth; and
(4) A Standard of Deferred Payments.

The essential characteristics of all public standards or measures is *stability*. We are all familiar with public measures of length, of weight, of capacity and of value. In the cases of length, weight and capacity, it *is* comparatively easy to define them physically; and, by preparing official standards with which local copies can be compared, to assure a correct and proper use of such standards throughout the country.

But in the case of the Measure of Value, the matter is more complicated. In the first place, money is rather a common denominator of value than an actual measure. Thus, it is only by finding the value of *this in money*, and of *that in money*, that we are able readily to compare the values of this and that. And in the second place, it is impossible to define with accuracy the Measure of Value by constructing a specimen measure : because the value or purchasing power of "money" is not the value or purchasing power of a single coin or unit of money, but the ratio or relation between all money offering to purchase, and all goods, services, and rights offering for sale.

And yet practical persons have devised a way of detecting *changes* in the Measure of Value; and, in consequence, ways of aiming at approximate stability in this Public Measure. By taking forty or fifty of the chief articles of trade, and representing the price of each article on any given date by the figure of 100, we can easily work out variations in prices between prices on the given date and those on a date, say, five years later, *in percentages*. And by combining these percentages into one average figure, we can see how the purchasing and measuring functions of money have varied at the end of the five years. Thus, if the average price of fifty commodities to-day is *twice* what it was five years ago, we know that the purchasing, measuring and other functions of money have *halved*. On the other hand, if the average price of commodities to-day is only one-half of what it was five years ago, we know that the measuring and other functions of money have *doubled*.

Reliable Index Numbers, as they are called, of wholesale prices are now kept in the leading countries of the world; so we are able to see quite clearly from month to month how the Measuring and other functions of money vary.

Against instability or change in our Public Measures, the public are most carefully safeguarded, because any change involves grave injustice to somebody—buyer or seller, debtor or creditor. And if the change be effected secretly, unknown to one or other side of a trade transaction, then the use of a changed or false measure becomes cheating, and a Police prosecution follows. The one exception, is our public Measure of Value. No matter how that Measure varies, no matter how one side to a trade transaction is swindled (there is no other word for it), by an unexpected variation in the State's Public Measure of Value, the seller or buyer, debtor or creditor, tax-payer or receiver, has no legal remedy—at present.

The lecturer here gave an example from Cawnpore where sellers of cotton were receiving such a low price for their produce that it did not, taking land revenue, etc., into consideration, pay for the cost of growing it. Sir Montagu believed that many agriculturists in Bengal, in Madras, in the Punjab and other parts of India were in the same difficulty. What would happen, he asked, if he secretly substituted in the scale a weight which, though marked *One Maund*, actually weighed *two* maunds? The poor cotton grower would unknowing deliver two maunds of cotton instead of one, and would eventually be utterly ruined.

Drawing frm his pocket a coin, Sir Montagu held it up to the audience. "This coin is marked

ONE RUPEE" he said, "but in reality it measures *two* rupees. When the buyer of to-day pays the agriculturalist, he receives twice as much produce of the fields as he got five years ago. When Government demands its land revenue, it is demanding from Zemindar and ryot twice as much of the sweat of his labour as it is fairly entitled to. So does the money-lender, and all other creditors. And when India pays its customary annual sterling obligations to the Secretary of State, it is now forced—through the distortion of the Money Measure—to give twice as great a volume of goods as it gave five years ago to pay exactly the same sterling liability.

Is this right? Is this fair?"

Coming to the urgent, practical side of the subject, Sir Montagu asked his audience—"What are we going to do to put matters right,—to correct the cruel distortion of our public Measure of Value,—to restore prices to the level at which they stood five years ago? For it is this distortion,—this unprecedentedly steep fall of prices—that very largely explains the severity of the economic crisis in which we are now all involved".

"And this is where the problem of maintaining approximate stability of our Measure of Value comes directly before us. As the average level of prices varies in response to the interplay of the demands of *all* purchasers and the offers of all sellers, prices will rise (*i.e.* the Measure of Value will shrink), if demands exceed supplies; and fall (*i.e.* the Measure will expand), if supplies be greater than demand.

"To correct the shrinkage or expansion of our Measure of Value, the State (or a State-guided Central Bank) should restrict, or increase, the supply of *money*—and "money" *includes* credit or bank money—as the occasion demands. (I exclude the destruction or State restriction of *goods* as being, in present world conditions—30,000,000 or more unemployed—unsound, inhuman and sheer madness).

"As the world is to-day suffering from a distorted expansion of the public Monetary Measure, *i.e.*, from a grave fall of prices, the only practical remedy that will immediately and directly correct the position, is to increase effective demand, that is, the demand by people possessing, or having command over, monetary Purchasing Tools which they desire to employ. Two courses are open to-day—one purely local, and the other both local and world-wide. They are—

(1) The immediate de-rating of the rupee in its relation to sterling, which would give more rupees to Indian sellers for everything sold overseas; and

(2) The re-opening of the Indian Mints to the free coinage of silver in co-operation and under agreement with the United States of America, which would give the masses all over the world more purchasing power without having to borrow it from the banks which, for most people, is an impossibility.

A Calcutta capitalistic paper which had recently promoted him to Scotch rank—"Mac Webb" had recently described to its anxious readers "The End of the Ratio Controversy," and had simply refused to publish official evidence of the terrible agricultural distress in India through fallen prices, or of the benefits actually secured by Australia, New Zealand and South Africa by the de-rating of their currencies. But now that President Roosevelt had practically been given power to de-rate the dollar from forty to sixty percent, Calcutta 1s. 6d. diehards would soon discover that so far from the "Ratio Controversy" having ended, it had only just begun!

(The speaker's proposals for remonetising silver can be found in *Indian Finance* of January 6, p. 29).

In concluding, Sir Montagu suggested taking a second leaf from President Roosevelt's book of remedies, and starting an "N.R.A." in India. The chief objects of our Indian National Recovery Association might be:

(1) To encourage and provide facilities for a systematic study of all economic questions in their relations to India, and in particular of monetary problems; so that a monetary standard and a currency policy best suited to the interests of India may be evolved.

(2) To educate and organise public opinion with a view to re-rating the rupee to sterling at a point best suited to the domestic needs of India, and to the developments that have taken place in international monetary theory and practice.

(3) To study problems connected with silver, with a view to increase the purchasing power of silver-using countries.

THE GOLD STANDARD AND OUR ECONOMIC TROUBLES IV

A REPLY TO SIR M. DE P. WEBB, C.I.E., C.B.E.

BY M. L. DOHERTY

I think Sir Montague Webb has missed the whole point of my articles, which were concerned with the monetary standard rather than the nature or quality of the material to be used as currency and put into circulation. I have no very great objection to the use of silver as currency; and as Sir Montague rightly points out, there is a great deal to be said in its favour, especially in the trying climatic conditions of India, and the low state of civilisation obtaining. But as a monetary standard it is open to the same objection as that of gold, *viz.* that it would make our currency supplies dependent on factors over which we have no control—mining operations, chance discoveries, to say nothing of the financial needs of foreign nations, foreign crises etc. And its adoption internationally would simply tend to perpetuate the present competition between the nations for its possession, resulting in tariff barriers and trade wars, leading to military wars. This may be remote in the case of silver at the present time as it was also remote in the case of gold on previous occasions; but the danger is there and best avoided. This is what I meant when I said that an inconvertible national paper currency would form a natural protection for home trade and serve to check dumping; because our paper money would not be likely to leave the country, and leave us stranded, as gold has done, and silver might, conceivably, do. And goods dumped in the country would only give the Dumpers a claim to our goods, and/or, services, in return, and not to our gold or silver. But if, on the other hand, it is essential that a monetary system must be based on a precious metal, be it gold, or silver, or both (a theory with which I entirely disagree) then I agree with Sir Montague that the only rational course open to the Government would be to remonetise silver. Silver has served its purpose well throughout the ages and could do so again. And its demonetisation has been the cause of a great deal of unnecessary economic misery. To remonetise silver to-day would roughly about double the purchasing power of the world. And it is purchasing power, that is lacking, which is the cause of all the trouble, due to the disappearance of gold and the fact that the world's monetary system was based on, and limited to, this single precious metal, gold. And when it is remembered that 9/10ths of our money—at any rate in England—has no physical existence at all, either in the form of gold coins, silver coins, base metal coins, or paper money, it makes it all the more difficult to understand why the British Government have not taken the lead in the remonetisation of silver and thus have paved the way to prosperity again. There must be an enormous amount of silver hoarded in India which to-day has no purchasing power, and its remonetisation would not only bring about the most beneficial results to this country but to the world in general.

But, to get back to the question of the monetary standard, money is not wealth, *per se*, but only a ticket or a token to wealth. Neither is it, or should it be, a store of value, as Sir Montague, points out —though I am not quite sure in which sense he has used this expression. A silver rupee is no more a store of value than would be a note of the same legal tender value, except in the sense that the former is an indestructible metal. "Store-of-value" money, or in other words, commodity-money, can only fulfil the functions of money so long as its commodity functions are inoperative. Golden sovereigns cease to be money as soon as their commodity functions begin to operate. If a jeweller buys a sovereign for its "store-of-value" he can only avail himself of this store by destroying the sovereign. He cannot use the gold, and the money, it represents at one and the same time.

But, on this point, let me quote Mr. Arthur Kilson, a man who had made monetary science his life-study, and who is probably the greatest living authority of the age on such matters. He says :—

"That money should confer upon the owner the *right to* "a store" or "stores of value" goes without saying. That money should be *per se* a "store of value" is a very different matter. The difference is this. The latter theory means that the Government must supply with every unit of money a certain fixed store of value, which, to the bulk of the population is useless, costly, and unnecessary. As a form of purchasing power a Treasury or bank note is just as acceptable as, just as useful as, and far more portable than so many golden sovereigns. Where money is merely the right to demand "stores of value" the owner of the money selects the particular kind of value he needs, and thus saves the Government all the expense of providing a special store. The other theory involves really two barter transactions—*viz.* the exchange of goods or services for gold coins, and the exchange of these for the goods the purchaser really requires.

Money that is a "store of value" is a commodity, and the exchange of one commodity for another is simply barter, even though one be a gold coin. Now money is an invention for avoiding the evils and inconveniences of barter, and commodity-money does not rid us of these evils. Commodity-money is only essential in countries where credit has not been developed, where the moral standard is low, where tradesmen are untrustworthy, and the Government weak or corrupt. Commodity-money is not, properly speaking a medium of exchange. It is itself the object that is being exchanged, and it cannot be both the object and the intermediary. If it is the commodity, it is not the intermediary, and if it is the intermediary it is no longer a commodity.

If money is to register accurately the values of other things, it must be entirely free from fluctuations of its own. The prime essential for a scale upon which variations of things are to be trustfully recorded is neutrality. It must be immune to those influences, the results of which in other bodies it is selected to register. What sort of a thermometer would that be on which the scale expanded with heat and contracted with cold, like the mercury whose expansions and contractions it is intended to register?

In short, the "store of value" theory does not harmonize with the functions of a medium of exchange."

Let the people of India have their silver currency by all means, if they want it—and they probably do want it. But, do not invite a repetition of the present crisis through placing an artificial limit on the currency by pegging it to a precious metal, the availability of which may be beyond our control.

NOW !

You Can Afford

THIS PORTABLE TYPEWRITER

A FULL-FLEDGED PORTABLE IN EVERYTHING BUT PRICE

The newest member of the Underwood Portable Family. A genuine writing machine at the lowest price ever listed for a complete typewriter ! Features available only in portable typewriters costing much more ! Standard keyboard—42 keys writing 84 characters. . both capital and small letters . . shift lock . standard line spacer . . paper and carriage release levers . . shift key . . quiet key and carriage action . . nickel plated metal parts . . lustrous black crinkle finish.

THE NEW UNDERWOOD JUNIOR PORTABLE

GREAT BRITAIN

FOREIGN TRADE IN 1933

The second week of the new year gives Britain the heartening tale of her foreign trade in 1933. The principal features of the returns are a further decrease in the imports of foodstuffs and manufactures, an increase in total exports and re-exports and an expansion of the raw materials exported from abroad for consumption in British industries. As in the case of India during recent months, the expansion in the export trade has been accompanied by a shrinkage of imports, so that the balance of trade in merchandise has been doubly benefitted. At the same time, the increase in the imports of raw material shows that British industry is maintaining a cheery outlook as to the prospects of the future. But unlike India, Britain has experienced during the year a phenomenal increase in the import of specie which, it need hardly be said, was not financed by the favourable balance of international payments, but by the inrush of refugee moneys into London as the safest international financial centre. The net result is that, in spite of the decrease in the unfavourable balance of trade in merchandise, the total visible balance of trade is more against Great Britain than in the preceding year. As this is a purely financial development with no significance to the state of national economy, it may be said that the trade returns for 1933 more than justify the optimism that is now prevalent in British industrial and commercial circles.

Balance of Trade less Adverse

The following table indicates the movement of trade in the two years 1932-33.

THE YEAR'S TRADE

£'000.000

Class	Imports		Exports		Re-Exports	
	1933	1932	1933	1932	1933	1932
Food, drink tobacco	340.6	372.9	28.5	32.3	12.1	15.2
Raw materials ...	180.4	164.6	46.0	43.6	25.7	23.7
Manufactures ...	151.1	157.8	280.4	275.6	11.1	11.8
Animals, not for food	0.8	2.2	0.5	0.6	0.2	0.3
Parcels ...	3.1	4.2	12.0	12.9	—	—
Total ...	675.8	701.7	367.4	365.0	49.1	51.2

It will be seen from the above that exports have begun to revive as the total for 1933 was £367,424 million against £365.024 million for 1932. The improvement in the export of manufactured goods is even more pronounced as there has been an increase from £275.556 million in 1932 to £280.442 million. The raw material group, too, which includes coal, has shown some recovery to £45.989 million from £43.608 million. The total import of food, drink and tobacco at £340.599 shows a fall of £32 million from the previous year. The net import of raw material, that is, the amount retained after re-exports, is £154.705 million against £114.884 million. Imports of manufactured goods fell from £157.781 million to £151.071 million. The final balance on the year's imports and exports of merchandise and bullion is as below:

(£000)

	1933	1932
Excess of imports over exports of merchandise ...	259,345	285,625
Imports of bullion and specie ...	262.039	160,003
Exports of bullion and specie	65,657	140,308
Excess of total imports over total exports ...	455,727	305,320

Increase in Adverse Visible Balance

The adverse balance of trade in merchandise has, it will be seen, shrunk from £285.625 million to £259.345 million in 1932 and £406.763 million in 1931. The total adverse visible balance of trade is thus £455.727 million. As mentioned already, this adverse balance has been financed largely by the influx of refugee funds into London.

Taking December by itself, the relevant figures on the usual bases of comparison is as below:

(£000)

	Dec., 1933	Nov., 1933	Dec., 1932
Imports ...	63,162	63,734	60,666
Exports ...	30,430	34,435	32,445
Re-exports ...	4,043	3,619	4,133

It would be invalid to rush to any conclusion on the basis of the unquestionable contraction of trade in December as compared with November. Not only were the working days in December less than in the previous month, but the Christmas holidays cut into the general business largely. And more reliable basis of comparison is furnished by the average trade per working day during the three months which is as below:

	Dec., 1933	Nov., 1933	Dec., 1932
Imports ...	2.63	2.45	2.43
Exports ...	1.27	1.32	1.30
Re-exports ...	0.17	0.14	0.17

Outlook of Giltedge

In view of the organic relation between the giltedge market in London and the course of giltedge in India, it is interesting for Indian readers to take note of the enquiry into the future of giltedge which Mr. Hargreaves Parkinson has made during the week in an address before the Cornhill Club. Mr. Parkinson, who is by the way the City Editor of the *Economist*, began by pointing out that, though, through their large investments in giltedge, which have increased during the last two years by £269 million to £569 million, the London clearing banks are largely interested in the future of giltedge, it would be erroneous to regard it as of interest only to the City and high financiers, in as much as holders of giltedge securities include such important institutions as insurance companies, trustees, savings banks, industrial companies, trade unions and hospitals. The two main risks which the investor in giltedge has to watch and appraise from time to time are, according to Mr. Parkinson, the currency risk and the capital risk. The currency risk arises from the propensity of Governments hard pressed by depressed economic conditions or by budgetary difficulties, to resort to inflation. It is obvious that in such a case the value of the return on investments would be seriously diminished and, therefore, the prices of government securities would fall and the value of the interest payments would together suffer. It is a matter of definite experience that during 1931, before and after the abandonment of gold standard in Great Britain, when it was widely apprehended that Great Britain would embark on an extensive policy of inflation, the value of long-term British government securities fell away as much as 17 per cent.

Currency and Capital Risks

One may reasonably presume to day that such inflation is ruled out even as a contingency; and it is therefore to the capital risk that one has to turn one's attentions.

The extent of the risk involved may be seen from the fact that old Consols, which touched 113⅞ in 1897, fell as low as 43⅛ in 1920. But to the extent that prices are affected by the amounts of stock outstanding, it may be said that the prospects are quite satisfactory for giltedge in the future, in as much as the British budget is balanced and any considerable increase in the national debt is not likely in the future. And there is even the possibility of an actual decrease from the present level.

The relation between the level of general interest rates and prices of government securities, as it can be judged from definite experience in the past, is set out by Mr. Parkinson in the following recital of facts:

> Bank rate remained at 2 per cent. from February, 1894, to September, 1896, *i.e.*, for 2½ years. To-day, Bank rate has been at 2 per cent. for only 1½ years.
>
> In 1896-97 Bank rate made a false start, rose to 4 per cent., but fell back to 2 per cent. in 1897. Thus, the real rise did not start until 3½ years after Bank rate first reached its low level. A similar result to-day would put the beginning of the rise in market interest rates not earlier than the end of 1935.
>
> In the nineties, British Government stocks rose steadily from 1893 to 1896, and remained high until the beginning of 1899. They then remained nearly three years at the high levels, and remained high for 1½ years after Bank rate had begun to rise. A similar time-table on the present occasion would presuppose only a very slight recession in Gilt-edged prices before 1936-37.

Trade Recovery and Giltedge Prices

It is often believed that a recovery of trade and the expansion of industrial acticity are inimical to the prospects of giltedge and that during the revival that is already well on the way giltedge prices must suffer. It is very pertinent to recall that during 1896-97 when the percentage of unemployment was as low as 3½ per cent. giltedge securities reached the peak of their value. Giltedge prices continued to rise for 3 years after industry had taken the turn. Even in recent experience the revival which started in the early months of 1933 has also been accompanied by a rise in giltedge prices.

Firmness in Future Giltedge

Summing up the results of enquiry into the past and speculation into the future, Mr. Parkinson looks for a firm giltedge market throughout 1934 and probably for the greater part of 1935, a gradual decline with no abruptness or violence and a future average level well above the average of last decade. He puts the future basic yield on long-term British government securities little, if anything, above 4 per cent.

It would still remain to examine what may be called the technical position of the giltedge market. There is, it might be said, a greater degree of vulnerability consequent on the larger volume of stocks and the large *port-folios* of banks which might call for reduction in case of a revival of trade. As regards the latter, it is generally overlooked that, precisely because banks have a large holding of government securities, they are bound to be more cautious in upsetting giltedge values. As for the revival, the certainty of tariffs and trade barriers continuing in the future militates against any large expansion of the international trade which it has been the function of London to finance. British industry for its part has during these years liquified its position and would be able to finance itself without making its needs felt on the money market proper, to the extent of inducing banks to unload their holdings of government securities.

Another Conversion

Thanks to an announcement in the London Gazette, talks of another conversion loan are again rife in the London market. The Treasury have now signified that the £105 million 4 per cent. Treasury Bonds 1934-36 will be redeemed at par on April 15 next. It will be remembered that this issue was made by tender in October, 1930 and that under its terms it was necessary to give three months notice of the intention to redeem the bonds and that April 15 next was the earliest possible date of redemption. There is yet no official indication of how the Treasury will find the money with which to pay off the bonds; and it is assurredly too early in view of the three months period intervening, to expect any such indication. Meanwhile it may be useful to note that £51 million of Treasury Bonds are to be paid on February 15th and further £105 million of 4 per cent. bonds have, according to the recent announcement, to be redeemed on April 15th. The latest experience of the Treasury in relation to the capital market is the issue of £150 million of 2½ per cent. conversion loan at the end of September partly as a cash offer and partly as an offer of conversion to holders of £51 million Treasury Bonds. It will be remembered that it was at first offered on a weekly tender basis and was issued later without, however, an adequate response from the market. It has since been possible to sell a good part of these bonds on the market. All the same, its unpopularity is beyond question; and in this context the *Financial News* suggests that "what the big institutional investors are looking for is a low yielding short-dated bond of which type of security there is now something of a shortage." "And of course," the *Financial News* adds, "the discount market will be most certainly attracted by a short bond at a very low rate offered at a discount." It is certain, however, that in spite of a decrease in the floating debt owing to the influx of taxation in the early months of the year, it would be absolutely necessary for Government to undertake a funding operation and to a further issue. And it is possible that the issue would be a "short" one, whatever may be its precise terms.

UNITED STATES OF AMERICA

PROSPECTS OF STABILISATION

Nearly all the crucial questions of American economy and finance have come up, during the week, either through rumours of official intention or significant moves, here and there, on the part of the Government. There is, in the background of all the shifts and turns of American economic policy, a gradual improvement in conditions of business. The stock markets have shown a degree of stability; and grains have been appreciably firm. The outlook of industries, of which more later, is also brighter. And pronouncedly so in the case of the basic industry of iron and steel. The various measures adopted by President Roosevelt in the spheres of banking reform or farm relief or aids to industry through public works and settling the muddle in currency and exchange are all well under the way, though everywhere the task of putting together the various strands is yet as difficult as ever. There is unmistakably, a feeling that matters are coming to a head, not in the sense in which the detractors of the Roosevelt experiment mean to convey the imminence of a collapse, but in the sense that the uncertainties, frictions and lack of coordination might be minimised and that the economic policy as a whole might be rendered of less emergency character. There is, hopefulness, too, that, if the opposing viewpoints of each question would come together in a spirit of mutual helpfulness and the President himself relinquish his proneness to baffle inconvenient friends and avowed enemies alike by the haziness of outline of his policy and methods, the task would not be found to be as difficult as it is generally made out by unfair and unsympathetic critics.

Finland melts Congress

Hence it is that there have been, during the week, more definite reports and more pointed suggestions

Air Mail Week

of the Government's intentions on all crucial questions. Taking for instance, the problem of war debts, it is universally believed that, though the action of Finland in meeting in full her December 15 instalment of war debts was lost in the loud clamour of the bigger nations who made token payments or defaulted, this little country had really succeeded in warming the heart of Congress and inducing that institution, for long implacable in its resolve to extract the last cent of war debts, to consider a more practical and a more generous treatment of its debtors. Mr. Roosevelt is, perhaps, less sentimental; but it is certain that he believes that any action, that Congress might take by way of reducing the burden of war debts on the one solitary "good boy" among the nations of the world, would provide him with a basis for readjustment of claims on the other debtor nations. Nothing definite has yet happened; but no one can miss the significance of the likelihood of Congress taking a definite action in respect of America's claims of war debts on Finland.

Secondly there is the circumstance that for the longest period since the gold policy was first inaugurated on October 25th, the gold price of the Reconstruction Finance Corporation has remained unchanged at 34.06 dollars per fine ounce. This suggests clearly an abandonment of the President's enthusiasm for the idea of the commodity dollar. Whatever might be necessary in the future and whatever the President might do, it is certain that the gold purchase policy has been fairly tried out and that the time is come when a beginning ought to be made in the clarification of economic policy with definite action in the monetary sphere and an agreement towards stabilisation. It is widely believed that the President is inclined to agree to a reduction of the gold content of the dollar to 60 cents, though he would not like to renounce the power conferred on him by the Inflation Amendment to the Farm Bill to make a further cut at a later stage to 50 cents, should such action be necessary in his opinion.

Incentives to Stabilisation

Even if President Roosevelt should continue to retain a placid faith in the efficacy of the gold purchase policy and changing the dollar price of gold as he first conceived it, there are to-day two definite incentives to the abandonment of such ideas and to consenting to a tentative stabilisation of the value of the dollar. There is, firstly, the possibility that with the definite devaluation of the dollar it would be possible for the authorities to revalue the stocks of gold in the Federal Reserve Bank and to appropriate for the purpose of a dangerously unbalanced budget the profits accruing from such revaluation. As mentioned in these columns on previous occasions, this course is no doubt beset with difficulties of its own. As in most other cases, here too, strictly legal and constitutional questions are there to be settled and the general tendency of combating any disagreeable measure with suggestions of unconstitutionality is in evidence in this case also. But Mr. Roosevelt has fortified himself with a finding from the Attorney General and the various courts in the United States of America to-day are generally less disposed to give decisions against the Government, not so much because of any weak-kneed submission to the Executive, but because of a profound sense of the emergency that exists in the national life to-day.

Stabilisation and New borrowing

The second incentive, which is of a negative kind, is provided by the need of the Government to proceed with their programme of new borrowing. It is obvious that in the absence of a definite statement of the Government in respect of inflation and devaluation, no investor can be induced to part with his moneys for the use of the Government. And borrow, the Government must. The President stated in his budget message that the recovery programme would involve Government borrowing of 10 milliard dollars in the next six months, including 4 milliard dollars to meet maturities. There has been no application of the brake on public expenditure. Only recently the President has asked the Senate to ratify a treaty with Canada which involves new expenditure. The Reconstruction Finance Corporation has asked not only for an extension of its term but also an increase of its capital. In these circumstances, it is inevitable that the Government should make an early start in new borrowing. According to the latest reports the first new offering will be in two year bonds with a resumption at the same time of open market purchases of government securities by the Reserve Banks on a substantial scale. Taken together, these two incentives may be regarded as being firmly decisive. The threat of the Federal Reserve Banks to dispute the claim of the Government to the profits of gold revaluation has been met by the suggestion that it would not be altogether impracticable or unwise to displace the Federal Reserve Bank system with a new central bank. The change in Mr. Roosevelt's attitude is indicated by the fact that on January 11th he held a conference on this subject with Mr. Eugene Black, the Governor of the Federal Reserve Board, with Mr. Henry Morganthau, the Secretary of the Treasury, and with Mr. F. Cummings, the Attorney General. On the strength of these, the *Journal of Commerce* has gone to the length of suggesting that stabilisation will be effected before February 1st. Full consideration of the possibility of stabilising the dollar is also being given by the House Coinage Committee which is summoning leading monetary experts to give evidence before it.

R. F. C. and Bank Control

Other equally important developments are in respect of the R. F. C.'s plans regarding banks and the President's intentions to ask Congress to give the Government power to guarantee the principal of Farm and Land Bank and Home Owner's Loan Corporation Bonds as well as interest, so as to hasten the conversion of mortgages into these obligations and thus bring relief to the debtors. He expressed the hope that the provisions requiring the writing down before exchange of the principal of mortgages, where the liens are excessive, will prevent material loss to the Government. In regard to the banks, the R. F. C. has stated recently that it will change the directorates, where advisable, of those banks, in which it has taken a large share of preferred stock. These purchases have been made on the ground that without such purchases the financial structure of the banks would be too weak to render them eligible for the deposit insurance scheme. It is now suggested that this indication of the Government's desire to make such purchases the beginning of a system of Government ownership and operation of the nation's banking system would have the effect of turning the bankers againts this scheme, and that bankers should soon feel that these immense advances of credit are more burdensome than helpful. But the numerous bank meetings that have been held during the week have without an exception authorised the sale of such preferred stock to the R. F. C., with the full knowledge that the R. F. C. would use its position to change the directorate, where it considers such action advisable.

Trade Recovery

As mentioned in the outset, the general outlook of industry is now more hopeful than in the last autumn or winter.

Air Mail Week

Exports of iron and steel during December totalled 157,600 tons, as against 164,760 tons during November. Imports during December totalled 28,980 tons, against 46,670 during November.

According to the American Iron and Steel Institute, steel ingot production for the current week is at 30.7 per cent. of capacity, compared with 29.3 per cent. last week.

The publication "Steel," in estimating mill activity last week at 31 per cent. of capacity, says that those closely connected with the industry foresee a rate of production of 60 per cent. before the end of the first quarter.

The outlook for steel is also considered more promising, although it is now admitted that there has been a substantial falling off in the first few days of the year in mill activity. The latter is estimated at 31 per cent. of capacity, unchanged from last week.

Electric power production for the past week has increased to 1,563,678,000 kilowatt hours, which represents an increase of 9.7 per cent. over the corresponding week of last year.

Preliminary carloading figures suggest that Friday's official figures will show a gain over last year of at least 13 per cent.

Freight car loadings for the week, at 499,900 cars, show an increase of 60,000 cars over the corresponding week last year.

The November earnings of 149 railroads reporting to the Interstate Commerse Commission show the following. Operating revenue $257,680,000, an increase of $6,930,000; operating income, $37,570,000, an increase of $4,170,000.

Mr. Ford has also announced that his company expects a 75 per cent. increase in this year's sales over those of last year. The January schedule, he says, is far ahead of any month last year.

The Great Atlantic and Pacific, one of the leading grocery chain stores, reports that its December sales were 1 per cent. over the previous December. This was the first gain since 1930.

It is expected that Government contracts will soon exert a very favourable effect on these figures. Considerable satisfaction is expressed that the U. S. Steel despatches of finished products already in December were showing sharp increases, being 601,000 tons, compared with 430,000 tons in November.

GERMANY

DR. SCHACHT'S NEW GESTURE AND THE STANDSTILL AGREEMENT

The present Standstill Agreement is due to expire on the 28th February, and as this date is drawing near, the question of Germany's national debt is being brought to the fore. Germany is anxious to secure a substantial reduction in her obligations. A postponement of the instalments of the capital payments to be made by the Golddiskontbank will be welcomed by the German debtors. Including the 75 million marks of the first instalment falling due by the 28th February, a sum of no less than 200 million marks will have to be paid up to the end of February, 1935. Such payments will, of course, not be possible under the present exchange conditions. As regards the foreign trade of the country, the quota agreements with Switzerland and Holland have already expired on the 31st December, 1933; but the arrangement with Sweeden has been provisionally prolonged until the end of this month. It is also learnt that an understanding in principle has already been reached for the renewal of the Swiss agreement. It will therefore be seen that Germany has every interest in keeping a conciliatory attitude with her creditors.

The foreign creditors on the other hand, are getting restive over the alleged discrimination in favour of Switzerland and Sweden. The United Kingdom have already lodged her strong protests against such discrimination. The weight of the British Government, it is understood, has also been lent to these protests; and failing any satisfactory re-assurance from Germany, the British Creditors are planning a system of exchange control. The United States of America have also recorded her severe dissent at the manner in which the short term loans are being treated. A similar protest has also been made by the Swedish Minister in Berlin against such unilateral treaties. The creditors will therefore meet in London on January 29th to discuss among themselves the question of the renewal of the Standstill.

In the meanwhile Dr. Schacht has issued an invitation to his country's creditors to a Conference in Berlin on January 22nd. In the light of previous experiences, it seems that it would be as well to express the views of the creditors in a written communication. The invitation to the Bank of England, in this connection reads as under :—

> "The Swiss Government has again approached the the German Government with the request for the conclusion of a separate agreement in the matter of payments. The Dutch Government have also made a similar appeal.

> In accordance with the announcement of the Reich Minister of Economy on December 7th, 1933, under which the Creditors' Committee is to be afforded an opportunity of defining its attitude, we hereby invite the representatives of the creditors for medium and long-term loan claims to a Conference in Berlin at the Reichsbank at 11 a.m. on the 22nd instant.
>
> We shall be glad if you will inform the interested parties in England."

Whereas the United States has announced that the Representatives of the Foreign Bondholders Protective Council will participate on behalf of American holders of German bonds in the forthcoming conference, there appears to be misapprehension as to the exact purport of this invitation in England. A report in the German Press which speaks of this "new English Misunderstanding" states that the invitation is solely due to a promise given to the creditors' representatives on December 7th. The paper adds that there has been no change in the views of the Reichsbank or of the Government on the transfer question. This only confirms the fears expressed in some quarters that the invitation does not in any way guarantee that the creditors will receive what they consider to be their due. If it is only a question of defining the attitude of the creditors, it is argued, there is no need for any informal conference of the kind that is proposed. The attitude of the British Creditors has been made clear with sufficient clarity in the notes of protests that Sir Eric Phipps, the British Ambassador has delivered to the Reichsbank. Equally clearly, though not with such force, has been made clear the attitude of the government of the U.S.A. The German Government have also made their announcement explaining their position; and if on the present occasion the entire ground is going to be traversed once again, it is better such conference does not take place.

There are, of course, others who are inclined to take a more optimistic view of the situation. It is thought that the threats from across the Channel have proved effective and that Dr. Schacht had come to realise that he had really gone "too far" in his attitude to-wards his creditors. It is therefore generally regarded as possible that this time Dr. Schacht is preparing himself to adopt a more conciliatory attitude and, that he may even lend a sympathetic ear to the Committee's own proposals. If, this should prove true, Dr. Schacht will be meeting the Long-term creditors in a real Conference which will raise new issues. Real negotiations could not be carried on with an entire disregard of the short-term debt service, for discussion of the possibilities of long-term debt position must necessarily imply some discussion of, or at least an attitude towards the short term debt position as well. In view of the above, it can reasonably be expected that in the Conference the entire question of Germany's debts will be tackled.

Developments from other quarters also lend support to this view. It is reported that the Bank for International Settlements has been carefully scrutinizing Germany's capacity to pay and conversations between the British, U.S., and German delegates were conducted throughout Sunday. The last balance sheet of the Reichsbank naturally came under the scrutiny of the governing body, and it was pointed out that though Germany pleads inability to pay the interest on bonds, the Reichsbank had been able to buy bonds issued under the Young and the Dawes schemes. The German answer would, of course, be that but such bonds are accepted in payment of German exports; and that without such transaction there would conceivably be no such exports and the position of the creditors would not be any the better.

FRANCE

THE NEW TRADE POLICY IN ACTION

The Chautemps Ministry have begun the New Year with a grim determination to expand the foreign trade of France, and the Ministry of Commerce which has hitherto occupied a relatively important position in the national affairs has now come to occupy a most prominent place. The bargaining technique, which France was depending on to secure favourable conditions in the quota arrangements, is now being put to the test and from the developments till now she does not appear to be faring well with her expectations. To keep England in a good mood, France made a gesture of granting some concessions by the removal of the exchange surtax on English imports. The import quotas from the other countries like the United States have also been cut by nearly 75% which has been reserved by France as a safe counter for bargaining. The import of British coal has been reduced; and a long list of commodities that would be subject to the cut was also issued. But all does not seem to be well; England has begun to grouse at the immense loss that would attend on the loss of the French market for her coal. The attempts of the British Ambassador in Paris to bring about a satisfactory settlement of the quota affair have been followed by a vigorous protest, against several aspects of French commercial policy, which the British Government has sent to the French Administration. It is understood that the protest covers a wide field and deals with the imposition of the discriminatory surtax and turnover tax which were the immediate cause of the present commercial *impasse.* The future trade relation between the two countries will depend to a great extent upon the French move after this protest.

There are some Left-Wingers in Britain who would go to the extent of suggesting retaliatory measures in the event of France remaining adamant in her attitude. The Grand Council of the Federation of British Industries have unanimously adopted a resolution calling for immediate retaliatory measures against the quota restrictions which, the Federation states, would involve England in a loss of over £8,000,000 in her foreign trade. Added to this, the Board of Trade has prepared an exhaustive survey of the effects of the new quotas; and it is expected that Lord Tyrewell, the British Ambassador, will be instructed to put the results of this survey before the French Administration.

Another event, that has probably contributed to the severity of the British protests, is the announcement by the French Government that the import quotas for American goods into France will be restored to their 1933 level, whereas it is still intended to reduce imports from other countries to 25 per cent. of this level. The Quai d'Orsay, in its Note sent to Britain in explaining its position against this alleged discrimination, points out that France has received a *quid pro quo* from America by way of facilities for the entry of French wines and liquors, and the gesture of reciprocation shown cannot therefore be taken as unjust discrimination. Judged however from the results, the Note does not appear to have satisfied the other parties to the bargain and the subsequent conversations which took place between Sir Robert Cahill, the British Commercial Counsellor and M. Colondre, Director of Commercial Affairs at the Quai d'Orsay have resulted in a hopeful atmosphere in Paris. The French have quickly responded to the British protests, probably at the threat of reprisals, and it is reported that the French authorities have decided to restore within the next few days to 100 per

NEW LIFE BUSINESS OF U. K. IN 1933

The New Life Assurance Business of many of the Companies of United Kingdom has recently been announced. Majority of the Companies show higher figures compared to that of the previous year and many of them have been able to show new high records in their new business amounts. The results appear to be very satisfactory and when all the Companies working in United Kingdom have announced their amounts, it may be found that the total New Life Business of U. K. has gained the ground which it has lost in 1931. We give below the New life business of those companies which transact life assurance business in India also.

NEW LIFE BUSINESS

(In thousand £'s.)

Names of the Company	*1933	1932	1931
Alliance	3,223	3,353	3,223
Atlas	2,800	3,253	3,061
Commercial Union ...	3,931	3,986	4,034
Gresham	2,190	1,890	1,996
Liverpool, London and Globe ...	2,100	1,980	1,950
London	2,280	2,075	1,796
North British and Mercantile ...	4,599	3,993	3,817
Northern	...	1,110	1,016

Standard	3,500	2,815	2,764
Yorkshire	2,500	1,828	1,771

*The 1933 figures are approximate as they are the preliminary announcements of the companies concerned.

The total New life business of 43 English Companies have been announced and their total amounts to £148 millions as against their corresponding figure of £133 millions in 1932 thereby showing an increase of £15 millions. The figures of the Dominion life offices and other foreign offices working in United Kingdom are not yet available and when these also have been published, it is expected that the total new business of the country will reach a new high record exceeding the present highest figure of 1930 (£166.3 millions). Almost all the above companies have exceeded their last year's figures, the Prudential showing the most outstanding increase of £3.8 millions, and the Pearl showing an increase of £1.2 millions. The Industrial life new business of the Prudential for the year 1933 amounted to £62.2 millions as against £63.6 millions in 1932. Thus the Prudential which is the greatest life insurance company in United Kingdom and the second greatest in the British Empire, does 3 times as much Industrial life business as ordinary life business.

We give below the results of the total life insurance business in United Kingdom for the years 1919 to 1932, the figures for 1933 not being available yet.

Ordinary Life Assurance Statistics in U. K.

Amounts in thousand £'s

Year	New Business Number	New Business Amount	Total Premium income	Expenses and Commission	Expense ratio
1919 ...	539,224	131,454	40,546	1,111	15.0
1920 ...	561,768	146,627	45,103	7,275	16.2
1921 ...	370,719	109,244	47,005	7,433	15.7
1922 ...	370,956	106,302	48,357	7,402	15.3
1923 ...	378,224	111,751	50,594	7,658	15.1
1924 ...	405,405	123,661	52,542	8,032	15.3
1925 ...	414,446	130,215	54,956	8,480	15.4
1926 ...	387,770	128,896	56,343	8,403	14.9
1927 ...	444,023	147,825	58,691	9,064	15.5
1928 ...	462,029	159,699	60,512	9,101	15.0
1929 ...	468,188	162,286	62,561	9,497	15.1
1930 ...	474,521	166,297	65,203	9,753	14.9
1931 ...	461,734	161,180	67,812	10,025	14.8
1932 ...	453,500	163,000	69,000	10,300	14.9

It will be seem that the new life business reached the record figure of £166.3 millions in the year 1930, the next year showing a decline of more than £5 millions, perhaps owing to the trade depression. The year 1932 saw a revival in the new business which appreciated by nearly £3 millions compared to the figure of 1931. From the figures so far available, the year that has ended just now, may in all probability reveal a new high record in the New Business of U. K.

We have received a copy of the Revenue Account and Balance Sheet of the National Employers' Mutual General Insurance Association Ltd. of London for the year ending December 31, 1932. The main activities of the company seem to be Motor, General, and Employers' Liability insurance lines though it transacts Fire and Personal Accident business also. The Motor account shows that during the year 1932, the premiums received amounted to £388 thousands claims amounted to £175 thousands, expenses including commission amounted to £151 thousands and transfer to the Profit and Loss account amounted to £50 thousands. The Motor insurance fund at the end of the year including the 40 per cent. reserve for the unexpired risks amounted to £216 thousands or 55 per cent. of the premium income. The Employers' Liability Account shows a premium income of £259 thousands, a claim of £142 thousands, expenses of £65 thousands, the reserve fund at the end of the year amounting to £264 thousands or 109 per cent. of the premium income. The General insurance account shows a premium income of £62 thousands, a claim of £30 thousands expenses of £24 thousands and a reserve fund of £40 thousands (65 per cent. of the premiums). The combined premium income of the other departments amounted to £29 thousands, the corresponding reserve funds amounting to £19 thousands. The premium income in all the three main lines have increased compared to the year 1931, though the premium income of the subsidiary lines have slightly fallen.

The Balance Sheet of the company shows on the liabilities side, the combined funds of the various departments at £538 thousands, a general reserve fund of £250 thousands, other reserves amounting to £30 thousands and other items amounting to £80 thousands. It is noteworthy that the company is gradually strengthening its general reserve fund and this year they have transfered £100 thousands to this fund from the Profit and Loss account. On the assets side giltedged securities account for £458 thousands or nearly 51 per cent. of the total assets, debentures account for £30 thousands or 3½ per cent., ordinary shares account for £135 thousands or 15 per cent., properties account for £65 thousands or 7½ per cent., mortgages amount to £11 thousands, cash amounts to £72 thousands or 8 per cent. and sundry debtors account for £86 thousands or 9½ per cent., the total assets of the company amounting to £898 thousands.

The financial strength of the company is quite strong and the assets of the company well distributed. Another important point worthy of noting is that the market value of the investments shows an appreciation of about £88 thousands. The consolidated profit earnings of the company has increased to 11.4 per cent. during the year from 10.8 per cent. in the previous year. The company has got a wide organisation with numerous branches in and outside Great Britain, the Head Office for the East being situated at Bombay. We wish the company every success it deserves.

COMPLICATIONS OF THE N. R. A. IN AMERICA

DANGERS OF MULTIPLE ENDS

BY THOMAS F. WOODLOCK

[*We give prominence to the following extract from the Wall Street Journal as we believe that it is the only attempt to give the objects, methods and consequences of the Recovery programme in the U. S. A. in one comprehensive whole, without any bias in favour of or against Mr. Roosevelt's policy. We commend the article to our readers for a careful perusal.*—Editor.]

"One reason why people so frequently feel confused in the attempt to understand what is going on in our economic affairs is that they fail to realize that several objectives are being sought at one and the same time, and that not all these objectives are so related to each other that the methods respectively employed to reach them are capable of simultaneous and harmonious operation. It is the interference of one set of activities with another that produces the cross currents which tend to bewilder the observer. For instance:

1. We are engaged in an attempt to raise the general level of commodity prices to what we consider a "normal" plane—say that of 1926; but

2. We do not wish to raise the "cost of living" to the consumer beyond his capacity to consume; therefore,

3. We aim to hold down the "profits" to capital and to deflect that "profit" into wages; consequently,

4. We cannot avoid introducing a factor deterrent to owners of capital, the effect of which is to prevent them from employing it in its normal channel, namely, the production of durable goods; and further,

GOVERNMENT COMPELLED TO EMPLOY

5. The machinery which we are employing to advance the commodity price level by manipulation of the monetary unit adds yet another influence deterrent to capital owners; and

6. Compels the government itself to undertake the employment of men by the erection of public works upon a large scale; which

7. Requires the use of government credit, entailing the borrowing of large amounts of money; but

8. Owners of capital who normally would lend their money to the government are somewhat hesitant to do so, not from doubt as to the government's ability to pay interest and principal, but from doubt as to the monetary unit in which payment would be made; and

9. This hesitation tends to bring about the very thing which capital owners fear, namely, currency inflation as the only means of meeting the government expenditures necessary to remedy unemployment, creating a short psychological vicious circle; of which

10. The centre is the uncertainty as to the future of the monetary unit, together with the uncertainty as to return, or profit, or invested capital; in addition to which

11. Class and regional antagonisms are naturally exacerbated, generating an atmosphere in which emotion rather than reason holds sway, rendering the process of accommodation of conflicting interests more than ordinarily difficult; the consequences being that,

12. Progress towards the various objectives—recovery from depression by relief of unemployment, relief of debtors by advance in commodity prices and permanent reform on broad lines of the economic structure, looking to a partial diversion of capital profits to labour, management and "the community"—is obstructed by the several advancing columns getting in each other's way, thus from time to time blocking the road.

A MEANS OF MEASURING THE DRIFT

These are, in the main, sources of the prevailing confusion which appears on the surface of things. By keeping them in mind it is possible to understand more or less what is going on and measure the drift of events towards or away from the desired objectives.

Topical Extracts :

It seems to this writer that, if we may represent the situation under the analogy of ocean currents, the current which is dominant and will probably determine the main drift is that of what he has ventured to call the economic revolution. By that phrase is meant the movement toward transfer of "economic power" from the few to the many, which is commonly described as "redistribution of the national income in the interest of social justice". This movement is the inevitable result of the advent of the "many" to the seat of political power (the phenomenon described in Ortega's 'Revolt of the Masses') and is merely a completion of the process set in motion by the French Revolution—its second phase. All the signs seem to point in that direction, and it will probably be safe to adopt that theory as a principle of interpretation in the observation of current events. Thus far, at least, there has been nothing in what has been said or done in the past nine months that is really inconsistent with this hypothesis, and there has been much to support it.

Which should make the present an absorbingly interesting epoch for those who have an instinct for history and like to view current events in that broad perspective.

PROGRESS IN U. S. S. R.

SIXTEEN YEARS OF THE SOVIET GOVERNMENT

November 7th saw the sixteenth anniversary of the establishment of the Soviet Government, which is controlling one-sixth of the earth. Out of the sixteen years' period the Soviet Union has enjoyed eleven years of peace, during which rapid progress has been made in all branches of the economic and cultural life. Illiteracy, one of the darkest and most disgraceful heritages of Tsarist rule, has been almost entirely abolished, whilst education and the advantages of cultural life, instead of being the privileges of the few, have been brought within the reach of the whole population. The peasantry, which was formerly kept in conditions of hopeless poverty, ignorance and superstition, has been freed to a full enjoyment of the advantages of modern culture and education.

AGRICULTURE

So great has been the intellectual progress made by the rural population in the past few years that the very difficult and complicated problem of transition from small-scale individual farming to large-scale farming with pooled resources and modern machinery, could be accomplished without excessive difficulties .

New and valuable machinery and superior methods of land cultivation have been introduced in the Soviet village during the past decade. The area of the State and collective farms had advanced from 2.7 per cent. of the total land under cultivation in 1928, to 80 per cent. in 1932. The transition from small farming to large-scale cultivation was so rapid that it was inevitable that mistakes would be made, before the necessary experience had been acquired. Nevertheless, in spite of such mistakes it was soon manifest that a well-managed collective farm is economically and socially infinitely superior to a number of small individual farms covering a similar area, but existing independently. The collective farm offered a better return to the farmer and greater possibilities for a fuller life for himself and his family. Moreover, it taught the peasant the use of modern agricultural machinery and tractors and enabled him to acquire most valuable experience in the running and administration of a large estate. No peasant of a fairly well-organised collective, who has had experience in large-scale farming, agricultural machinery and tractors will ever dream of going back to his little patch and the antiquated methods of cultivation practised in the past by the individual farmers in Russia.

Great and successful efforts have been made in 1933 to improve the effectiveness of the collective farms and, in this, the establishment of political departments at the farms has been a great asset. The utilisation of some 25,000 experienced administrators from the towns for the important task of organising the collectives on a business foundation has proved of the greatest advantage. The system of State grain deliveries has also been modified and a definite grain tax, fixed in advance and paid for at a stipulated Government price, has been introduced. Regulations for the disposal of surplus products by the collectives and private farmers allowed larger amounts to be sold in the open markets. New decrees have been promulgated providing for assistance to the collectives in improving their organisation and methods of work.

The machine-tractor stations established throughout the agricultural areas of the U.S.S.R. have proved themselves the determining factor in the collectivisation campaign. Though all the problems connected with agriculture have not yet been solved there is, nevertheless, no doubt that a sure foundation has been laid for the establishment of co-operative methods of land cultivation on lines suitable to the general principles underlying the Soviet system.

PROGRESS IN INDUSTRY.

Soviet industry has undergone rapid expansion in the past few years, the process being particularly accelerated after the introduction of the first Five-Year Plan, in October, 1928. A number of new industries, unknown in pre-revolutionary Russia, have been established, more than a thousand large industrial enterprises have been erected and set going, and many of the existing factories greatly extended. An important tractor industry non-existent in pre-war Russia has been established, whose output in the first ten months of 1933 was 62,070 tractors. The same applies practically to motor vehicles. During the last six years of the existence of Tsarism, from 1910 to 1916, a total of 450 machines were produced in Russia, while during the first ten months of the current year 40,861 motor cars and lorries were manufactured in the country. In 1932, the output for the whole year was 50,250 tractors and 25,000 motor lorries and cars.

Three large metallurgical centres are now operating in Magnitogorsk, Kuznetsk and in Krivoy Rog, in addition to several minor ones of local importance, which are active in various parts of the country.

The progress in the machine construction industry is particularly noteworthy, as, at the present time the U.S.S.R. is already in a position to equip its industries largely with machinery of home production, instead of importing practically all its industrial equipment.

Topical Extracts:

Considerable quantities of coal were required to supply the growing industry of the U.S.S.R. As a result of the efforts made in the past decade, the coal output is now more than double that of the pre-war time. The coal produced in 1913 totalled only 28,777,001 tons, while in 1932 an output of 62,983,000 tons was reached. An important increase has taken place this year when new records were achieved, the daily output on November 15th exceeding 240,000 tons. Last year's production total was surpassed by November 20th of this year.

Extensive development has taken place during the past sixteen years in electric power production. In 1913 the total capacity of the electric stations in the Russian Empire was 1,098,000 kilowatts and the power output was 1,945 million kilowatt hours, whereas in 1932 the capacity of the stations was already 4,567,000 kilowatts and the output for the year was 13,500 million kilowatt hours, and 27 large stations were under construction. Already the Dnepr hydro-electric station is the largest in the world, while other stations three and four times its size are being built on the Volga.

The growth of heavy industry has laid the foundation for the development of light industry. The output of consumption goods has increased from year to year since the introduction of the Five-Year Plan. From 5,000 million roubles in 1928-29, output has risen to 8,000 millions in 1932 and the estimates for the current year are for an output valued at 10,000 million roubles. A determined effort is now being made by those in charge of the undertakings engaged in the production of consumption goods to improve the quality of the goods turned out and to eliminate waste.

FINANCE AND NATIONAL INCOME

The national income of the U.S.S.R. is estimated to exceed 51,000 million roubles this year. This is more than 222 per cent. of the national income in 1926, when such income was 22,900 million roubles, and 237 per cent. of the income in 1913, when it amounted to 21,500 million roubles. The national income in 1932 was 45,100 million roubles.

The improved financial position of the population has also been reflected in the great increase in loan investments which form at present an important proportion of the revenue of the State budget. The Union budget, as is natural for a highly socialised State, is a direct indicator of the economic progress of the country. The growth of the budget has been particularly extensive since the introduction of the first Five-Year Plan. While in 1928-29 the State budget totalled 8,112 million roubles, in 1932 it had risen to 30,490 million roubles, and the estimates for the current year are for 35,000 million roubles.

NEW CITIES

Great strides have been made in the building of new cities and in the rebuilding, extension and improvement of the old cities. Municipal economy was re-organised on broad principles so that it can now serve the whole population instead of only a small fraction—its wealthier citizens—which was the case before the war. In a large number of towns a water supply and drainage system were introduced for the first time after the Revolution. Electric tramways and electric lighting have been introduced and popularised in places which never saw them before. The establishment of parks, recreation grounds, clubs, hospitals, dispensaries, child welfare centres and so on, has contributed enromously to the raising of the standard of living and of the health of the people of the U.S.S.R.

EDUCATION

An intensive and persistent campaign has been carried out in the Soviet Union for the spread of education both in town and country, and for the entire abolition of illiteracy. So successful was the effort that by the end of 1932, illiteracy had been reduced from about 76 per cent. of the population in the pre-revolution time, to 10 per cent. Universal and compulsory education, first introduced in 1931, is now being extended from a four year to a seven year course. More than 25 million children were receiving education this year as compared with only eight millions in 1913. The standard of literacy among the younger people of the Soviet Union now compares favourably with that in other advanced States.

The higher educational institutions are now attended by more than half a million students, while more than two million students attend technical schools.

With the spread of education, the cultural requirements of the population are growing. The publication of books has been very greatly increased, the circulation of newspapers is now counted in millions, while several thousands of libraries and travelling libraries have been organised both in urban and rural areas. The theatre, the cinema, and broadcasting are also largely utilised for educational purposes in the Soviet Union.

CAPITAL INVESTMENTS IN INDUSTRY

In the four and a quarter years of the operation of the first Five-Year Plan, the Soviet Government invested in the national economy, according to the figures available, a sum of 120,000 million roubles against the 86,000 millions estimated in the Plan. Thus the Soviet Union has exceeded its estimates of financial investment by approximately forty per cent., and this has been achieved in a shorter period than the set five years. The national income increased during the period by 85 per cent., which made possible the realisation of such an extensive plan. It is noteworthy that the Soviet Union was able to carry out its investment programme in spite of the absence of long term credits from abroad and at a time when the world crisis seriously hampered economic intercourse between the Soviet Union and other countries.

The huge sum of 120,000 million roubles was used to open up the inestimable wealth of the Soviet Union and to stimulate the productive forces of the country. There is no doubt that the Soviet system of economy provides great opportunities for the accumulation of capital and for the speeding up of national construction.

Financial planning in the Soviet Union has the special aim of mobilising and distributing national income in accordance with the general plan of socialist construction. A comparison between national income and the State budget will make this abundantly clear.

While the national income amounted in 1932 to 45,100 million roubles, the budget accounted for 30,900 million roubles or 68.5 per cent. A somewhat smaller proportion was maintained in 1931, when the national income amounted to 37,800 million roubles and the budget to 20,500 million roubles (54.3 per cent.), while for the current year the estimated national income is 51,000 million roubles and the national budget 35,000 million roubles or 68.6 per cent.

The finances of the Soviet Union are based principally on the accumulations of the State and Co-operative undertakings. In 1932 these accumulations accounted for about two-thirds of the consolidated financial plan. Fully 80 per cent. of the total budget revenue, some 22,000 million roubles, was obtained in 1932 from these sources.

One of the very striking accomplishments of the Soviet financial system is the success in the mobilisation of public funds, which means the collection of savings from collective farmers, workers and employees to be used for economic development.

THE SIGNIFICANCE OF LOANS

Loans in which practically the whole population participate also play an important part in financing national construction. State loans are issued and utilised in the Soviet Union for productive purposes only, and not for current expenses on administration or defence.

The total programme for the mobilisation of public funds in 1933 was based on the expected total of 8,800 million roubles, as against 7,400 million roubles collected by these means in 1932. The estimates provided for the industrial centres and for the villages to be equally responsible for supplying the State with these funds, namely 4,400 million roubles from each of the two groups.

The progressive rise of Soviet expenditures and their practically exclusive utilisation for economic, social and cultural requirements generally characterise Soviet finance. This can also be seen from this year's budget, which provides for the investment of 23,912 million roubles in national economy, 2,393 million roubles on social and cultural needs, while the provisions for the needs of national defence amount to only 2,264 million roubles. In the total budget the last named item only forms 6.5 per cent. The total amount spent on social and cultural needs will amount this year to 11,000 million roubles, of which only 2,393 million roubles will come from the Union budget, while the remainder is obtained from local budgets and other contributors.

Both the industrialisation of the country and the development of agriculture are dependent primarily upon the State budget. During the period of the operation of the first Five-Year Plan the State budget increased more than threefold, the increase being from 8,112 million roubles in 1928-29 to 30,900 million roubles in 1932, whereas the investments in national economy augmented during the period five and a half times, and investments in industry and electrification went up seven times. Administrative expenses increased during the same period by only 69 per cent. and the increased expenditure on national defence was even less, only 49 per cent.

In the cultural sphere, the extent of the investments made possible the elimination of illiteracy and a great development of technical and higher education.

The large investments in social insurance by the Soviet Union have led to the realisation of the extensive Soviet social insurance scheme in full.

The rapid growth of the finances of the Soviet Union, reflecting the development of national economic processes, represents a powerful factor in the economic and cultural progress of the country and increasingly helps in the building of the new society in Russia.

(Moscow Narodny Bank Monthly Review).

STATISTICAL INFORMATION

RAILWAY EARNINGS

The total approximate gross earnings of all State-owned Railways for the week ending 30th December, 1933, (39th week) amount to Rs. 174 lakhs, Rs. 6 lakhs **Less** than the figures for the last week and Rs. 3 lakhs **More** than the figures for the corresponding week of the previous year and Rs. 10 lakhs **Less** than the corresponding week of 1931-32.

The total approximate gross earnings from 1st April to 30th December, 1933, amount to Rs. 62.00 crores or Rs. 113 lakhs **More** than tht figures for the corresponding period of the previous year and Rs. 42 lakhs **Less** than the corresponding period of 1931-32.

The following are the up-to-date approximate gross earnings of the State-owned Railways from 1st April, 1933, as compared with the actuals of the corresponding period of last year:—

A. B.	117	114
B. N.	500	529
B. B. & C. I.	732	751
Burma	232	245
E. B.	361	372
E. I.	1,262	1,266
G. I. P.	834	848
M. & S. M.	486	506
N. W.	1,014	1,015
S. I.	398	391
Tirhoot & Lucknow Bereilly ...	128	135
Other Railways	23	28
Total ...	6,087	6,200

A comparison with the figures of the previous week for the principal State-owned Railways shows **Decreases** in the approximate gross earnings of all railways except the Burma, E. B., and S. I. A comparison with the figures of the corresponding week of 1932 shows **Increases** in the approximate gross earnings of all the principal State-owned Railways excent the A. B., B. B. & C. I. Burma, G. I. P., and M. & S. M.

CALCUTTA

The overseas import trade of Calcutta in private merchandise received a further set-back in December, the value receding from Rs. 2.78 crores to Rs. 2.34 crores against Rs. 2.71 crores in December, 1932. Exports too declined. The value fell from Rs. 6.10 crores to Rs. 5.32 crores against Rs. 5.43 crores in December, 1932.

Imports

A comparison of the values of the principal imports with the figures for December, 1932, is indicated below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Machinery and millwork	32 (−6)
Cotton goods	21 (−28)
Iron or steel	17 (+6)
Other metals	10 (level)
Hardware	9 (+2)
Oils, mineral	8 (−3)
Liquors	7 (+1)
Electrical instruments	6 (−1)
Tobacco	1 (level)

On the import side, machinery and millwork, Cotton goods, mineral oils and electrical instruments declined in value. The fall under machinery and millwork was partly due to lesser imports of sugar machinery from the United Kingdom. The total yardage of cotton piecegoods shrank from 27 million yards to 8 million yards, and the value fell from Rs. 40 lakhs to Rs. 18 lakhs. The heavy fall under cotton goods was mainly due to lesser imports of grey goods. The fall under mineral oil was chiefly due to importation of oils other than kerosene at lower prices. There was no importation of wheat from abroad.

Exports

The variations in the values of the principal exports as compared with the trade of December, 1932, are indicated below:—

	In lakhs of rupees.
Jute manufactures	182 (−20)
Tea	142 (+33)
Jute, raw	98 (−39)
Lac	21 (+9)
Hides and skins	19 (+3)
Seeds (non-essential)	16 (+11)
Grain, pulse and flour	8 (−2)
Coal	3 (−1)

Direction of Exports

Some of the principal commodities improved, whilst others declined in value. Raw jute, tea, manganese ore, lac and skins were largely shipped to the United Kingdom. Japan, as usual, was the chief buyer of pig iron, and Germany of hides. Gunny bags went largely to New Zealand and gunny cloth to the United States of America. Rice which formed the bulk of the trade under the head "grain, pulse and flour" went mostly to Mauritius.

MADRAS

The total value of imports from foreign countries into the Madras Presidency during December, 1933, was Rs. 1,20,62,317 as against Rs. 1,06,45,077 in the corresponding period of the previous year showing an increase of Rs. 14,17,240. The commodities that contributed to the increase were:—Drugs and medicines Rs. 3,42,331 (+Rs. 2,08,768); machinery and millwork Rs. 17,08,132 (+Rs. 10,66,803); fuel oils 2,105,534 gallons, Rs. 3,63,871 (+1,555,354 gallons, +Rs. 2,68,449); kerosene oil 542,679 gallons. Rs. 1,69,587 (+542,679 gallons, +Rs. 1,69,587); cotton raw 298 tons, Rs. 3,00,075 (+298 tons, +Rs. 3,00,075); piecegoods printed, dyed and woven 2,183,653 yards, Rs. 4,34,434 (+852,851 yards, +Rs. 1,24,404); vehicles Rs. 9,72,483 (+Rs. 6,44,042).

The total value of exports to foreign countries from the Presidency of Madras during December, 1933, was Rs. 2,00,12,435 against Rs. 1,98,51,242 in the corresponding period of the previous year showing an increase of Rs. 1,61,193. The principal commodities that contributed to the increase were: cow hides 816 tons, Rs. 15,75,781 (+152 tons, +Rs. 565,650); groundnut oil cakes 4,814 tons, Rs. 2,43,727 (+4,615 tons, +Rs. 2,29,827); rubber raw 988,509 lb. Rs. 2,98,660 (+953,363 lb., +Rs. 2,81,474); other articles Rs. 1,20,26,407 (+Rs. 2,66,074).

TRAVANCORE EXPORT TRADE

The statement of export trade issued by the Travancore Chamber of Commerce for the months from July to November, 1933, is now available.

The total quantity of coir yarn exported was 105,847 cwts, as against 112,091 cwts. during the corresponding period in 1932. The United Kingdom, Germany, Holland, Norway, Africa and America imported larger quantity than in 1932, while Belgium, Denmark, Sweden, Italy, Greece, Turkey, Australia, Burma, Calcutta, Bombay and Karachi did not get down as much as they did last year. If we take the trade in this article for the corresponding period for the past three years we see that the export in 1931 was 117,592 cwts. which declined to 112,091 cwts. in 1932, going further down to 105,847 cwts. The matting exported was 3,049,905 yds. as against 2,374,579 yds. in 1932. The United Kingdom, Holland, Denmark, Malta, Africa, Australia, Straits, Karachi and other Indian ports went in for larger shipping, while Turkey, Persia, New Zealand, China, Calcutta and Bombay imported less. The trade during the past three years was 1,834,504 yds. in 1931, 2,374,579 yds. in 1932 and 3,049,905 yds. in 1933. The export of mats showed a higher figure on the whole, *viz.*, 66,185 cwts. in 1933 as against 64,041 cwts. in 1932. Larger quantities were sent to the United Kingdom, Holland, Denmark, Malta, Arabia, Straits, Burma, Calcutta and Karachi, while Germany, Sweden, Africa, America, New Zealand, China, and Bombay indented for less quantity than last year. The shipments for the past three years were 73,335 cwts. in 1931, 64,041 cwts. in 1932 and 66,185 cwts. in 1933. Tea is still in a sorry plight as is seen from the fact that there was an export of only 75,404 lb. in 1933 as against 343,727 lb. during the corresponding period in 1932. The United Kingdom imported only about one-seventh of the quantity it required in 1932. Burma never went in for Travancore tea at all, nor did any other Indian ports import anything except Bombay whose import was nominal, *viz.*, 680 lb. in 1933 as against 42,089 lb. in 1932. A slightly larger quantity went to Ceylon and Australia and New Zealand patronised Travancore tea to a larger extent during the current year than they did last year. The economic depression has not yet affected the export of rubber which was 272,601 lb. in 1933 against 157,301 lb. in 1932. Ceylon took the whole stuff as against 91,935 lb. in 1932. Though Calcutta and Bombay imported last year 5,000 lb. and 30,366 lb. respectively last year, this year's trade was blank. The figures for the past three years were 732,188 lb. in 1931, 157,301 lb. in 1932 and 272,601 lb. in 1933. Pepper too is better, 37,114 cwts. in 1933, when compared with 30,334 cwts. in 1932. Of this quantity the proportion sent to foreign countries was negligible, the major portion going to Indian ports, Calcutta 19,786 cwts. in 1933 as against 18,339 cwts. in 1932; Bombay 12,659 cwts. as against 5,917 cwts.; Karachi 3,092 cwts. against 3,731 cwts.; other Indian ports 118 and 114 cwts. The figures for the past three years are 35,238 cwts. in 1931, 30,334 cwts. in 1932 and 37,114 cwts. in 1933.

BURMA

The report on the principal variations in the foreign trade of the Province of Burma during the month of December, 1933, as compared with the corresponding period of 1932, shows as follows:—

The combined value of imports and exports was Rs. 177.31 lakhs as against Rs. 213.86 lakhs, showing a decrease of Rs. 36.55 lakhs.

Import

The total value of merchandise decreased from Rs. 71.85 lakhs to Rs. 67.78 lakhs. The following are the principal items showing decreases:—

(*i*) Imports of salt decreased from Rs. 2.87 lakhs to Rs. 0.82 lakhs; and

(*ii*) There were no imports of kerosene in tins during the month under report while in December, 1932, imports recorded under this head were valued at Rs. 1.22 lakhs. Imports of cotton piecegoods white, however, showed an increase of Rs. 2.79 lakhs when compared with the corresponding period of last year.

Export

The total value of Indian merchandise recorded during the month was Rs. 109.54 lakhs as against Rs. 142.01 lakhs, showing a decrease of Rs. 32.47 lakhs. The following articles accounted for the decreases, the value and the amount of decrease being noted against each:—

	Value Rs. lakhs.	Decrease Rs. lakhs.
Grain, pulse and flour—		
Paddy	0.10	2.73
Rice	34.75	25.65
Pig lead	8.62	7.30
Paraffin was	13.72	2.78
Cotton raw	16.02	1.61

There were no exports of copper, other (matti) during the month under report while in the previous December exports recorded under this head were valued Rs. 2.01 lakhs. The following articles, however, showed increases, the value and the amount of increase being noted against each:—

	Value Rs. lakhs.	Increase Rs. lakhs.
Fodder, Bran and Pollard—		
Rrice bran	5.16	1.23
Metals and Ores—		
Tin ores	5.37	2.67
Wolfram ore	5.81	2.11
Wood and Timber—		
Teak wood	5.41	2.72

ADEN

The number of merchant vessels over 200 tons that used the Port of Aden in November, 1933, was 131 as compared with 125 in the corresponding month last year, and the total tonnage was 574,000 as compared with 539,000.

Excluding coal, salt, fuel oil, Military and Naval stores and transhipment cargo, the total tonnage of imports in the month was 9,200 and of exports 6,000 as compared with 8,100 and 5,700 respectively for the corresponding month last year.

The total value of imports excluding Government stores was Rs. 48,08,000 as compared with Rs. 45,81,000 for November, 1932, and of exports Rs. 29,14,000 as compared with Rs. 33,19,000.

The total value of both imports and exports together was Rs. 77,22,000 as compared with Rs. 79,00,000 for the corresponding month last year.

Imports during the month were above those for November, 1932, in the case of grain, pulse and flour, gums and resins, hardware, hides raw, seeds, skins raw, sugar, piecegoods grey, twist and yarn, tobacco manufactured and treasure private; and below in the case of coffee, piecegoods white and printed or dyed and tobacco unmanufactured.

Exports were above those for November, 1932, in the case of grain, pulse and flour, gums and resins, hardware, hides raw, sugar, piecegoods grey and tobacco manufactured; and below in the case of coffee, seeds, skins raw, piecegoods white and printed or dyed, twist and yarn, tobacco unmanufactured and treasure private.

FOREIGN TRADE OF KARACHI

The statistics of the foreign trade of the port of Karachi for December, 1933, issued by the Collector of Customs show that the total value of imports (merchandise) amounted to Rs. 96 lakhs, a decerase of Rs. 10 lákhs and that of exports to Rs. 37 lakhs, a decrease of Rs. 14 lakhs as compared with the figures for December, 1932.

The decrease under cotton manufactures occurred in receipts of white and coloured goods. Imports of white goods amounted to nearly 5 millions yards as against 14¾ million yards in December, 1932, while those of coloured goods totalled 2¼ million yards valued as against 4 million yards. Imports of grey goods at 2 million yards showed an increase of 1¼ million yards. The decline in imports of woollen goods was due to smaller receipts of piece-goods, chiefly from France. The increase under oils occurred in receipts of kerosene oil from Russia and fuel oils from Persia. Larger arrivals of sugar machinery mainly accounted for the improvement in imports of machinery.

The decrease under cotton exports was due largely to Japan having made no purchases during the month under report as against 2,539 tons taken in December 1932. Italy, Belgium, France and Spain also took smaller quantities. China, which took 111, tons in December 1932 purchased 4,331 tons during the month under review. Exports of rapeseed declined as the result of reduced purchases by the Netherlands. The increase in exports of raw skins occurred in shipments of goat skins to the United States of America. The improvement under wool was also due to increased shipments to the United States of America.

RICE TRADE IN 1933

A survey of the year 1933 leaves no doubt that Burma has not escaped the world depression and prices gradually declined throughout the year.

The price of Kanoungtoe Small Mills Quality opened in January at Rs. 185 and fell steadily until the beginning of April when it touched Rs. 152-8. Reports of China buying improved rates, which remained fairly steady around Rs. 170 until August when news of the Dutch import duties arrived and prices subsequently fell to Rs. 162-8.

Although rumours of the proposed resale of Burma rice by the Japan Government came to the market first in June it was not until September that business was actually done and the market touched Rs. 146.

In September also news of the new China import duty was received and prices remained around Rs. 150 until the latter end of October.

November saw a shortage of Rice and bear operators caught short, which resulted in Kanoungtoe Small Mills Quality being marked up to Rs. 202-8.

The balance of the old crop being less than was expected, the season may be said to have closel at the end of November.

New crop was first dealt in during the first week of August, Rs. 185 being done by speculators for February-April 1934 but the price had fallen to Rs. 172-8 by the end of the month and in September was quoted at Rs. 159.

It must be remarked, however, that a particularly small business was done in New Crop.

The dull opening of the new season does not perhaps incline one to optimism but the imporving trade conditions in the West will no doubt be reflected in due course in Burma.

The advance in freight rates of Rs. 2-12-0 per ton to Ceylon Ports to Karachi inclusive and annas eight to Calcutta and Chittagong has been to a certain extent responsible for prices easing during the last fortnight and India and Colombo shippers have restricted their business.

The demand from India has continued fairly steady and there is no improvement in foreign demand. Sales by Millers have been small and bear speculators are having defficulty in obtaining cover.

WOOLENS FROM JAPAN

In the import of woollen price-goods Japan has an amazing share. The Japanese imports, which in the first half of 1931-32 were only 38,000 yards valued at Rs. 22,000, rose to the remarkable figure of 569,000 yards valued at Rs. 2,67,000 in the first half of 1932133. But her activity in the next year was even more amazing. The Japanese imports in the grst half of the current financial year rose to 1,361,000 yards valued at Rs. 8,92,000. No. amount of artificial aid, such as a heavier import duty, can prevent this dumping, unless India can manage to produce wollen piece-goods at prices which can compete with Japanese prices.

A new commodity with Japan has begun to export to India only this year is alum. The average price of import from other countries works out at Rs. 5-4-10 per case. The Japanese price is Rs. 3-13-8. The result is that Japan can stand the imposition of a heavy import duty and defy competition from other countries. We cannot expect to produce alum at present at a price which can possibly compete with Japanese prices. But this new advanture of Japan in the Indian market serves to remind us how urgent is the problem of advancing our chemical industry.

COMPANY REPORTS

THE CENTRAL BANK OF INDIA LD.

The net profit of the Central Bank of India Ld. for the year ended 31st December, 1933, subject to audit, includinb the amount brouyht forward from last year's account, amounts to Rs. 18,24,616 which the Directors have resolved to dispose of as follows:—

An ad interim dividend at the rate of 6 per cent per annum, free of Income-tax, paid for the half-year ended 30th June, 1933, on 672,528 shares, Rs. 5,04,396 ; Final dividend at the rate of 6 per cent. per annum, free of Income-tax, for the half-year ended 31st December, 1933, on 672,528 shares, Rs. 5,04,396 ; Amount set aside for Super-tax, Rs. 50,000 ; Amount transferred to Sinking Fund in respect of Land and Buildings, Rs. 2,00,000 ; Balance carried forward to next year's account, Rs. 5,65,824 ; Total Rs. 18,24,616.

BANK OF HINDUSTAN, LD.

Report for the year ending 31st December, 1933.

The acute trade depression continues. The net profit for the year under report amounts to Rs. 41,200-11-1 which with the sum of Rs. 21,838-6-10 brought forward from the previous year's account makes a total of Rs. 63,039-1-11. Of this amount Rs. 17,500 has been written off against Currency Notes lost in transit through the Post Office and the balance of Rs. 45,539-1-11, now available, the Directors have appropriated as under:—

To Dividend at 3 per cent. per annum (free of Income Tax) Rs. 30,000, to write off Preliminary Expenses Rs. 5,000, balance carried forward Rs. 10,539-1-11, total Rs. 45,539-1-11.

We made further representations to the Government through the Indian Legislative Assembly in regard to the Currency Notes lost in transit and the Finance Member has kindly promised to appoint an Expert Committee to enquire into the question.

In August last a Sub-office of the Bank was re-opened at Pollachi on trial for a year.—N. Sankara Aiyar, Ag. Secretary. Madras, 5th January, 1934.

The balance sheet is as under:—

Liabilities

	Rs.
Capital	10,00,000
Contingent Fund	19,570
Deposits	25,41,523
Dividends Not Drawn	592

Cash on hand and with Banks ...	7,15,186
Total ...	37,02,760

DARJEELING CO., LD.

The tea produced for the 1933 season amounted to 651,200 lb. (against 807,000 lb. for 1932). The company adhered to the scheme for the voluntary restriction of crops agreed to by the majority of Indian tea producers after the passing of the Indian Tea Control Act, 1933, for regulating the export of tea. Climatic conditions were, however, unfavourable to such a restricted crop being produced. Tea sold to date amounts to 394,848 lb., the average price realized being 1s. 6.91d. per lb., compared with 1s. 2.09d. per lb. obtained for 595,742 lb. of the 1932 crop covering a similar sale period. Owing to the uncertain condition of the market for Darjeeling teas, the directors have decided to postpone the consideration of a dividend until the accounts for the year are closed. A dividend of 2½ per cent. was paid for the whole of 1932.

Extracts from Directors' Report:

Report for the year ended 31st October, 1933, shows a profit on the Revenue Account of Rs. 3,74,197-2-9, add balance brought forward Rs. 51,295-4-2, total Rs. 4,25,492-6-11 ; from this there has been placed to Depreciation Rs. 1,20,000, Taxation Rs. 70,500, Adjustment Rs. 19,052-14-8, total Rs. 2,09,552-14-8, balance Rs. 2,15,939-8-3, deduct ad-interim Dividends on Preference and Ordinary Shares at 5 per cent. Rs. 75,000, leaving at credit of Profit and Loss Account Rs. 1,40,939-8-3, this balance we recommend should be disposed of as follows:—In payment of a dividend of 5 per cent. on the Preference Shares, making 10 per cent. for the year ended 31st October, 1933 (free of Income-tax), Rs. 30,000 ; In payment of a dividend of 5 per cent. on the Ordinary Shares making a total of 10 per cent. for the year ended 31st October, 1933, Rs. 45,000 total Rs. 75,000, leaving a balance of Rs. 65,939-8-3 to be carried forward to next year's Account.

Climatic conditions have been favourable and the crop at present being crushed is expected to show an increase in sucrose content, full supplies of cane being anticipated. The stocks of sugar have been valued for Balance Sheet purposes at contract rates, no stocks remaining unsold.

Two new Babcock and Wilcox Boilers are to be installed at the end of the present working season, to take the place of four Multitubular Boilers. It is anticipated that these will save the Company approximately Rs. 25,000 per annum in fuel.

During the year the amount standing at credit of Reserve against Zurpeshgies and Advances was transferred to Capital Reserve to the extent of Rs. 2,04,420-11 and the balance of Rs. 10,834-13-6 to Reserve Account.

Mr. A. B. Shakespear, being absent from Cawnpore, appointed Mr. J. M. Lownie as his alternate director for the purpose of signing the Report and Accounts.—T. M. Macdonald, J. M. Lownie, A. E. Ker, F. Barclay, Directors.

ASIATIC GOVERNMENT SECURITY LIFE ASSURANCE CO., LTD.

SUGAR INDUSTRY AND SURCHARGE

NO SURFEIT OF PROTECTION

We need hardly offer any excuse for reverting to the proposal, motioned in certain circles, for the removal of the 25 per cent. surcharge on the import duty on sugar. In the first place, this is just the time when the Finance Member should be giving his finishing touches to the taxation proposals and modifications to be announced in his budget on February 28. It is, therefore, essential that, as regards so important a question as the alteration of the import duty on sugar, the Finance Member should be appraised of the views held in disinterested quarters. In the second place, Sir George Schuster's reference to this question in his last budget speech is, we think, calculated to lend some measure of encouragement to the hope which sugar importing interests entertain in reference to the surcharge. Prefacing his discussion of the customs duties, Sir George said that he had given special consideration to two very special duties, those on silver and sugar; and in the case of sugar, he uttered the warning that the present rate of duty was substantially higher than the maximum protective duty recommended by the Tariff Board. He continued: " it is conceivable that a lowering of the duty might in this case stimulate imports of foreign sugar. But just at this moment many new factories are being started and for that reason one must hesitate to make any sudden change. On the other hand, it would be highly imprudent for those, who are investing money in the sugar business, to forget that present conditions are more favourable than those on which, according to the recommendations of the Tariff Board, they have any right permanently to rely. For this reason, a due proportion of the profits that are earned on the present basis must be accumulated as reserves, for no right can become established to a continuance of the present position."

On the eve of the budget last year, the market buzzed with rumours of an impending excise duty on sugar. On the eve of the 1934-35 budget, the gup is in regard to the removal of the surcharge. It is, of course, natural that pre-budget rumours should be rife in markets particularly susceptible in this regard. But considerable uncertainty prevails as a result; and the consequent unsettlement does great injury to an industry which is in the way of consolidating the ground. We have, therefore, to examine the several issues in this matter and present to the Government a correct and unbiased statement of the case. In the third place, there is almost a certain prospect of a budgetary deficit and in exploring the avenues for additional sources of income, higher yields from sugar import duties as a result of their lowering may prove quite alluring to the Finance Member. It were best that he realises whether, as against the increased revenue he might get, there are no positive disadvantages which are likely to inflict great harm in a variety of ways.

This suggestion for the removal of the 25 per cent. surcharge on the import duty on sugar was discussed in the last session of the Associated Chambers of Commerce; and of all the arguments advanced in favour of the proposal, there was none stronger than the plea that the sugar import trade had suffered. Whoever suggested that the import trade in a particular commodity would not suffer if the State had deliberately adopted a policy of protection with a view to encourage and foster the domestic manufacture of that commodity? Mr. J. M. Lownie, in opposing the resolution made a comprehensive and convincing speech and he disposed of this plea on behalf of the import trade in telling words: "Protection was asked for, and finally granted with the express purpose and intention of damaging the sugar import trade, which had reduced the Indian industry and the cane-growing cultivator to desperate straits and the measure of the fall, in Government's revenue is really the measure of the development, expansion and improvement of the Indian sugar industry and of the cultivators' prospects. I go even further and say that the ideal in the development of the Indian industry and in the assurance of better conditions for the cultivator will not have been attained until the sugar import trade of India entirely ceases". Of the two interests, the few importers of foreign sugar on the one hand or the many investors in the Indian sugar factories and the millions of cultivators of sugarcane on the other hand, which should engage the paramount consideration of the authories? It is almost preposterous that any claim could be put forward on behalf of the few importers of a foreign commodity when the sanctioning of such claim will jeopardise the national interest.

It has also been said that of the present duty, which is Rs. 6-10 per maund, only Rs. 5-5 is the protective duty recommended by the Tariff Board and Rs. 1-5 represents the 25 per cent. surcharge imposed in the Emergency Budget of 1931 for revenue purpose; and that while the protective duty should be retained, the revenue duty should be abolished. The same point was stressed by the Finance Member when he urged the sugar trade to remember that the present rate of duty was substantially higher than the maximum protective duty recommended by the Tariff Board. We are not sure whether the Finance Member is altogether right in only referring to the recommendations of the Tariff Board when at the same time, recalling the actual provisions of the Sugar Industry (Protection) Act of 1932. Section 4 of this Act clearly laid down that "the Governor-General-in-Council, if satisfied that sugar not manufactured in India is being imported at such a price as is likely to render insufficient the benefits intended to be conferred upon the sugar industry by Section 2 of that Act, may increase the duty to such an extent as he thinks fit." The maximum protective duty according to the Sugar Industry Protection Act was, therefore, left to the absolute discretion of the Governor-General-in-Council and was to be on such a basis as to render the protective benefits effective. Before Sir George Schuster could do anything with the sugar duty, he must realise that whether, if so, to what extent, the present revenue duty of Re. 1-5 per maund is functioning as the export protective duty that was intended to be levied in the contingency of foreign sugar being imported into India at such a price as to defeat the purpose of the Sugar Industry Protection Act. Did the Finance Member make sure that the contingency contemplated in Section 4 of that Act had not arisen? Only of he was satisfied on this point, he could urge that the present rate of duty on sugar was substantially higher than that intended by the Government when they decided on according protection to the sugar industry.

Our case is that the contingency provided for in Section 4 has actually arisen; and that if the surcharge were not in force the Government would actually have had to raise the import duty. The Tariff Board recommendation of Re. 1-5 as the protective duty on sugar was based on the assumption that the price of imported sugar in Calcutta would be Rs. 4 per maund ex-duty. The Tariff Board realised that, in normal conditions, it was probable that the Calcutta price of imported sugar would be at or over this level. At the same time, they were also aware of the fact that sugar had been landed on earlier occasions, at as low a figure as Rs. 3-8 per maund ex-duty. They, therefore, consider it unlikely that in circumstances of extensive competition or for such reasons Java manufacturers might be prepared to land their sugar in Calcutta at as low a figure as Rs. 3-4 per maund. Providing for such a situation, they recommended that, if market prices in Calcutta fell below Rs. 4 per maund ex-duty, the further duty of annas 8 per cwt. should immediately be imposed, over and above the protective duty which they recommended.

An examination of the Calcutta prices of sugar affords abundant proof that the apprehensions of exceptional competition have proved true. The following remarks of Mr. Lownie show the actual position on an appreciation of the prices prevalent at the beginning of 1934: "at the beginning of this year Java sugar was quoted in the Calcutta market at Rs. 9-12 per maund. When it is appreciated that this price includes Rs. 6-10 per maund duty at the present scale (inclusive of the surcharge), it will be realised that Java is able to offer her sugar in Calcutta at Rs. 3-2 per maund ex-duty." The Tariff Board opined that in circumstances of exceptional competition, Java might let loose sugar in Calcutta at as low a figure as Rs. 3-4 per maund. Mr. Lownie has proved that Java manufacturers are actually importing sugar into Calcutta at the ridiculously low price of Rs. 3-2 per maund. This is surely sufficient to satisfy the Governor-General-in-Council that sugar not manufactured in India is being imported at such a price as is likely to render insufficient the benefits intended to be conferred upon the sugar industry by Section 2 of that Act. (Sugar Industry Protection Act).

There can, therefore, be no doubt that, if the plea of the sugar importers, that the surcharge should be removed, is accepted, there would arise the occasion for action under the reserve power provided in Section 4 of the Sugar Industry Protection Act. Nothing is more ludicrous than a situation of this kind.

Another important consideration is that in fixing on the particular rate of protective duty the Tariff Board assumed that the profit from molasses would work out to Re. 1-8 to Rs. 2 per maund. Far from molasses being an asset, it is now in the nature of a liability. Most of the sugar factories will now be glad to give it away and will be fortunate if they have not to pay for its removal—provided a place can be found to which it can be removed. Mr. Lownie calculates that this factor alone is responsible for the calculations proving adverse to the sugar industry to the extent of between Rs. 1 lakhs and Rs. 2 lakhs per factory.

Let us now once again examine the words of Sir George Schuster minutely. He says that present conditions are more favourable than those on which according to the recommendations of the Tariff Board the sugar industry had no right permanently to rely. We have pointed out that, while the one favourable condition is the addition of the revenue duty to the protective duty, there are two distinct unfavourable conditions, namely, (1) the sale of Java sugar in Calcutta at annas 14 per maund less than the rate assumed in the Tariff Board recommendations, (2) the loss of Rs. 1 lakhs to Rs. 2 lakhs per factory on account of the unsaleability of molasses. Sir George Schuster may not, therefore, be altogether right if one advantage is set against the two disadvantages and the results carefully appraised. In the next sentence Sir George gives the advice that the profits that are earned on the present basis ought to be accumulated as reserves. From this it seems to us clear that he would give the surcharge a lease of at least a few years as, otherwise, there can be no meaning in his suggestion that reserves should be accumulated. There can be accumulation of reserves only if the period in question extends over a number of years. For these reasons, we do not think that Sir George had, in making his observations in the last budget, any idea in his mind as regards an early removal of the surcharge. If the sugar industry takes firm root to such an extent as to enable the domestic market to be supplied through domestic sources, and if the various concerns have, in this process, placed their finance on a secure footing and their business on a permanent basis of an assured custom, then will be the time for the Government to enquire how exactly the sugar industry should be made to pay by way of compensation for the loss of customs revenue which the Government have suffered. When that time comes, and it may not be for a few years, there will be certainly a case for excise duty. So far as the removal of surcharge is concerned, a case in favour of this plea could not be made even in such conditions.

IMPORT DUTY ON SUGAR

25 PER CENT SURCHARGE

The following is the full text of the speech delivered at the last session of the Associated Chambers, by Mr. J. M. Lownie in opposing the resolution advocating the removal of the 25 per cent surcharge on the import duty of sugar:

On behalf of the Upper India Chamber of Commerce, and on behalf, particularly, of the white sugar industry of India and the cultivator I oppose this resolution. My opposition is principally on two grounds; first, that the removal of the surcharge at the present time would be premature and vitally harmful to the interests of the white sugar industry and particularly to the newer sugar factories, and second, that the reason put forward in the resolution for the removal of the surcharge, namely the critical position of the sugar import trade, is not adequate to justify the greater harm that would result to the far more important interests of Indian industry and of the cultivator. In the Tariff Board's report it was laid down that the sugar industry included the cane grower, and the manufacturer of *gur* and all other indigenous forms of raw sugar, as well as the manufacturer of white sugar. Between them these branches of the industry utilize annually about 50 million tons of cane, according to the Sugar Technologist to the Imperial Council of Agricultural Research, and of that quantity, about 6 million tons are crushed in white sugar factories, and about 40 million tons are made into *gur* and an inferior sugar made by khandsaris. *Gur* competes to some extent with khandsari sugar and the latter with white sugar factories' production of second sugars. Any reduction in the price of white sugar by the removal of the surcharge will react eventually on the cane cultivator, and it was his interest that the Government of India wished to protect, the Tariff Board's report showing that *gur* was actually being imported into India from Java. By protecting the white sugar industry of India they foresaw an increased outlet for the cultivator's produce.

We have seen the result of the passing into law of the Indian Sugar Protection Act. The number of sugar factories has grown from 27 to over 100, while there has also been a great increase in the khandsari sugar industry. The area under cane cultivation has increased by about 25% in the United Provinces alone, while owing to the expansion of the cultivation of Coimbatore varieties, the quantity has increased by about 50%. White sugar factories this season are estimated to crush about 6 million tons of cane and produce about 500,000 tons of sugar. If the surcharge is taken off factories will not be able to pay present prices for cane, nor pay as high prices for *gur* for refining. Cane is at present the only paying crop that the ryot can grow.

As regards the white sugar industry, more than 15 crores of rupees have been invested in machinery, building and land. Having given protection to these interests, are the Government of India to stand aside and see them destroyed? I would remind you of the present position in Java. Out of about 170 factories, only some 40 to 50 are now working; the others are closed waiting for better times. Another important point—Java has stored nearly three million tons of sugar, enough for India's requirements for nearly three years, as much as India will probably produce in her white sugar and khandsari factories in three years. If that quantity is let loose on India, which is Java's nearest and largest market, you can imagine the result. Further, Java is still on the Gold Standard at present. If she goes off that standard she will depreciate her currency. The Government of India might then have to bring into operation the Safeguarding of Industries Act.

In speaking on behalf of the Indian sugar industry I am by no means oblivious of the fact that this surcharge was imposed as a temporary measure, and, as is emphasised in the resolution, for revenue purposes. The Honorable Finance Member, in his budget speech, reminded us that it would be highly imprudent for those who were investing money in the sugar business to forget that present conditions were more favourable than those on which, according to the recommendations of the Tariff Board, they have any right permanently to rely.

We do not claim any permanency but we do claim that the time is little, if any, more opportune this year than it was last year for the lowering of the duty.

Sir George Schuster at that time recognised that at the moment many new factories were being started and that for that reason he must hesitate to make any sudden change.

To-day, also, many new factories have only just started and still more are under construction. None of these new factories, which have been set up since the imposition of a really protective tariff brought encouragement and gave an impetus to the industry, has had an opportunity to place anything to reserve from the profits which the surcharge may have made possible.

Much has been said of the enormous profits which have come to the industry. Profits have been made by the older-established concerns which had survived the lean years of the past to come into the couple of prosperous years which have followed the setting up of real protection for the industry. But would it not be fairer to average these few years of good profits with the previous years of little if any profit and even of loss? These profits cannot compare with those of the jute boom years in Bengal.

Another fact which must not be ignored is that the profits from molasses which were counted as an asset to the producer by the Tariff Board have now become a liability and an actual loss. Instead of obtaining from Rs. 1-8 to Rs. 2 a maund for its molasses, the sugar factory is now glad to give it away and will be fortunate if it has not to pay for its removal—provided a place can be found to which it may be removed. This means a loss of between one and two lakhs of rupees per factory.

The internal competition which very naturally followed on the increase in the number of factories has resulted in a lowering of prices and a decrease in profits; and to the new factories particularly the removal of the surcharge at this time will be a very serious matter. Indian sugar prices at the present time average something like Rs. 1-8 a maund lower than they did a year ago, and Rs. 2 to Rs. 2-8 lower than the year before that. When to this is added the disappearance of any profit from molases, it must be accepted that the position of the Indian sugar producer today in spite of the protective duty and of the surcharge on that duty is in point of price realised actually worse than it was when the Tariff Board reported on the industry in 1931, but by reason of the present position of the sugar import trade, the producer is today able to sell his sugar in greatly increased quantity, and the cultivator is

able to plant cane in larger quantity and of better varieties and is able to dispose of it to the white sugar factories at prices which he could not possibly realise from *gur*, or *rab* or from the *khandsari*.

Although Indian sugar prices have greatly fallen the prices being paid for cane this season are no lower than they were last season and the benefit to the cultivator from the protection which this resolution seeks to reduce is at least as great today as it was a year ago.

If the surcharge is removed, the first interests to suffer from its removal will be those of the cultivator. Any comparison as between these vast interests and the interests of the few importers of foreign sugar would be grotesque in its superfluity.

Let us examine the actual results, on the prices of Java sugar and of Indian sugar, of the removal of the surcharge, if this recommendation should be given effect to.

At the beginning of this year Java sugar was quoted in the Calcutta market at Rs. 9-12 per md. When it is appreciated that this price includes Rs. 6-10 per maund duty, at the present scale, inclusive of the surcharge, it will be realised that Java is able to offer her sugar in Calcutta at Rs. 3-2 per maund, ex duty—an excellent example of dumping.

In their report on the sugar industry the Tariff Board in 1931 stated that it was probable that under normal conditions the price of imported sugar in Calcutta would be Rs. 4 a maund ex duty but they realised that prices had touched as low a figure as Rs. 3-8 per maund landed at Calcutta, ex duty, and considered it not unlikely that in circumstances of manufacturers might be prepared to land their sugar in Calcutta at as low a figure as Rs. 3-4 per maund. They went on to recommend that should market prices in Calcutta fall below Rs. 4 per maund, without duty, a further duty of annas 8 per cwt. should immediately be imposed, over and above the protective duty which they recommended: and I have just shown that the price is now Rs. 3-2 per maund c.i.f. Calcutta.

It is necessary, Sir, to remind this meeting that this recommendation was in principle adopted and there exists on the statutes a measure of protection for the Indian Sugar Industry which has not yet been brought into use, but which, on the figures I have quoted, it will be necessary to bring into use if this resolution is acted on.

I refer, of couse, to Section 4 of the Sugar Industry (Protection) Act of 1932 whereunder

> "the Governor General in Council, if satisfied that sugar not manufactured in India is being imported at such a price as is likely to render insufficient the benefits intended to be conferred upon the sugar industry by Section 2 of that Act may increase the duty to such extent as he thinks fit."

At present it is only the surcharge which prevents Java Sugar from being imported into India at a price which will again put Indian sugar out of the market, and it would, I submit, partake of the ludicrous if the removal of the surcharge became the occasion for action under this reserve power in the Sugar Industry (Protection) Act.

If Java first white sugar is now selling in Calcutta at Rs. 9-12 per maund, the removal of 25% surcharge of Rs. 1-13 per cwt., or Rs. 1-5 per maund would allow of it selling at Rs. 8-7 per maund. Indian made white sugars compete in the Calcutta market with Java sugar at prices varying from -/7/- below to -/2/- above Javas, but these selling prices include railway freight or steamer freight, which amounts to as -/12/- or Re. 1 per maund, according to the location of the Indian factory. To compete with Java at Rs. 8-7 in Calcutta, perhaps the largest distributing market in India, Factories would have

to sell at Rs. 7-7 to Rs. 7-12 f.o.r. factory; and these prices only relate to first sugars. The production of many factories is only 50% firsts, and the balance, seconds, would sell probably at Rs. 1-8 below firsts, as seconds have to compete with khandsari sugars. The Tariff Board based their recommendations on the presumption that Indian factories would realise an average for firsts and seconds of Rs. 8-13-1. Could it be argued that the benefits of the protective duties would then be sufficient for the Indian Industry?

I submit, Sir, that I have shown indisputably that at the present time the surcharge alone keeps Java sugar from flooding our market, and permits of the continuance of our own white sugar industry and of the benefits which this industry brings to the cultivator.

The second principal point of objection to this resolution is its intention to relieve the position of the sugar import trade at the expense of the Indian Sugar Industry. There is no indication, in the resolution, that any regard for the consumer is behind it. And indeed no such argument could for a moment be sustained since today, even with an import duty of 166 per cent *ad valorem* on imported sugar the consumer is paying less for his sugar than he did a few years ago when the duty was no more than 25 per cent. The plea has been put forward in the resolution that the revenues of Government have suffered because of the increased duty and the consequent decline in imports. The representatives of Government may well be trusted to advance it. Actually it was advanced last year during the budget debate by the Hon'ble Finance Member who said that the development of sugar manufacture in India, though satisfactory in itself, was making a very serious hole in the Government revenue. But from the point of view of the Indian sugar producer the Government have over a long series of years enjoyed a high revenue from sugar imports without devoting nearly enough of it towards the improvement of the Indian Sugar Industry. Now that they have at long last consented really to protect the industry by means of a sufficiently high assured tariff and to encourage its improvement by grants through the Imperial Council of Agricultural Research they do not, I take it, grudge to the industry the success which they have made possible. It is not too much to say that the Indian white sugar industry was almost at the point of destruction because of the competition from imported sugar before real protection was granted. Protection was asked for, and finally granted, with the express purpose and intention of damaging the sugar import trade, which had reduced the Indian industry and the cane-growing cultivator to desperate straits and the measure of the hole in Government's revenue is really the measure of the development, expansion and improvement of the Indian sugar industry and of the cultivators' prospects. I go even further and say that the ideal in the development of the Indian industry and the assurance of better conditions for the cultivator will not have been attained until the sugar import trade of India entirely ceases.

The resolution recognises the need for the adequate protection of the indigenous sugar producing industry, but the mover's idea of adequate protection is not the same as ours. To us it will have become adequate only when India need no longer import an ounce of sugar, unless in fancy forms and for fancy purposes.

In conclusion, I take the liberty to quote a passage from an editorial article in *Indian Finance*, of the 24th December which reads:

> "In a country committed to a policy of protection the interest of the import trade as such must be considered to be altogether irrelevant. The conditions of

INDO-JAPANESE TRADE AGREEMENT

FULL TERMS

The following are the terms of the Indo-Japanese Trade Agreement as given out by Mr. Setsuzo Sawada and Sir Joseph Bhore:—

M. F. N. Treatment

(1) In respect of Customs duties, Japan and India shall reciprocally accord the most-favoured-nation treatment to any article, the produce or manufacture of the other country.

(2) Subject to the reservation by both countries of the right to make such changes in their Customs tariffs as may be necessary for the protection of their own interests, Japan and India agree that, should any modification of the Customs tariff by either country result in the trade interests of the other being adversely affected in any appreciable measure, they shall, upon the request of the country so affected, enter into negotiations with the object of reconciling, as far as possible, the trade interests of the two countries.

Exchange Fluctuations.

(3) Notwithstanding all other agreements that have been entered into, India shall have the right of imposing or varying from time to time special rates of Customs duty on articles, the produce or manufacture of Japan, other or higher than those levied on similar articles, the produce or manufacture of any other country, at such rates as India may consider necessary to correct the effects of any variation of the exchange value of the yen relative to the rupee subsequent to December 31, 1933.

In imposing or varying, or on being requested by Japan to vary such special rates of Customs duty, India undertakes to give full consideration to relevant factors which tend to raise export prices of Japanese goods, such as the purchase by Japan of raw materials in markets outside Japan and the adjustment of internal Japanese prices, and to limit such rates to what is necessary to correct the effects of the depreciation of the exchange value of the yen relative to the rupee on the duty-paid value of Japanese goods imported into India. India further undertakes that no change in any such rate shall be made until it has been in force for at least five weeks.

Reciprocally, the Government of Japan shall have the right of imposing or varying special rates of Customs duties similar to those to which reference has just been made, on articles, the produce or manufacture of India, under similar circumstances and subject to similar conditions, provided that such right should not accrue to Japan unless the exchange value of the rupee relative to the yen shall be depreciated below the value of 0.732 yen.

PIECE-GOODS DUTIES.

(4) Without prejudice to the agreements concerning the most-favoured-nation treatment and the measures to correct the effects of exchange fluctuation, Customs duties to be imposed by the Government of India on Japanese cotton piece-goods should not exceed the following rates:—

Duty on plain greys, 50 per cent. ad valorem or 5¼ annas per pound.

Duty on others, 50 per cent. ad valorem. It is understood that India shall not impose on Japanese cotton piece-goods other than plain greys a specific duty exceeding 5¼ annas per pound, subject to the agreement concerning the most-favoured-nation treatment.

Quota Calculations.

(B) (i) The basic quota of Japanese cotton piece-goods to be exported to India in one year beginning April 1 shall be limited within a quota which shall be fixed in accordance with the quantity of Indian raw cotton exported to Japan in one year beginning January 1 of the same year.

(B) (i) The basis quota of Japanese cotton piece-goods to be exported to India in a piece-goods year shall be 325,000,000 yards, and it shall be linked with 1,000,000 bales of Indian raw cotton exported to Japan in the corresponding cotton year.

(ii) In case the export of Indian raw cotton to Japan in any cotton year should fall below 1,000,000 bales, the quota of Japanese cotton piece-goods for the corresponding piece-goods year shall be determined by reducing the above basic quota at the rate of 2,000,000 yards for every 10,000 bales of deficit.

(iii) In case, however, such export in any cotton year should exceed 1,000,000 bales, the quota of Japanese cotton piece-goods for the corresponding piece-goods year shall be determined by increasing the above basic quota at the rate of 1,500,000 yards for every additional 10,000 bales, provided that the quota should in no case exceed 400,000,000 yards.

(iv) In case the export of Indian raw cotton to Japan in any cotton year should exceed 1,500,000 bales, the quantity thus exported in excess of 1,500,000 bales shall be, for the purpose of determining the relevant quota of Japanese cotton piece-goods, added to the quantity of raw cotton exported to Japan in the following cotton year.

(v) In respect of both cotton piece-goods and raw cotton, re-exported quantity shall be deducted from the imported quantity.

TWO INSTALMENTS.

(C) (i) A piece-goods year shall be divided into two half-yearly periods, the first half-yearly period from April 1 to September 30, and the second half-yearly period from Ootober 1 to March 31 of the following year.

(iii) The quota for the second half-yearly period shall be 200,000,000 yards.

(iii) The quota for the second halfyearly period shall be provisionally fixed at the quantity which will be derived by deducting 200,000,000 yards from the yearly quota calculated on the basis of the estimated export of Indian raw cotton to Japan in the corresponding cotton year. The adjustment of the export of Japanese cotton piece-goods to India shall be made by the end of the said period on the basis of the exact quantity of Indian raw cotton exported to Japan in the corresponding cotton year, subject to the rules of the allowances between periods.

Thompson BOILERS & ACCESSORIES
FAIRLIE HOUSE, FAIRLIE PLACE, CALCUTTA

(iv) A transfer from the quota of the first half-yearly period to the quota of the second half-yearly period shall be permitted up to a maximum of 20,000,000 yards. From the second half-yarly period to the first half-yearly period of the succeeding piece goods year and vice versa, a transfer up to a maximum of 20,000,000 yards shall be permitted.

Classification of Quota.

(D) The quota of cotton piece goods shall be classified into the following categories in conformity with the following percentages: Plain greys, 45 per cent.; bordered greys, 13 per cent.; bleached, 8 per cent.; coloured and others, 34 per cent.

The percentage allotted to each of the above categories may be modified subject to the following conditions:—

(i) The increase in the category either of bordered greys or bleached shall not exceed 20 per cent. of the quantity allotted to that category, and the increase in any other category shall not exceed 10 per cent. of the quantity allotted to that category.

(ii) The quantity transferable from the category either of bordered greys or bleached shall not exceed 20 per cent. of the quantity allotted to that category, and the quantity transferable from any other category shall not exceed 10 per cent. of the quantity allotted to that category; and

(iii) The total quota of cotton piece goods for any piece goods year shall not be increased by the above modification of the quantity allotted to each category.

Intervening Period.

(E) (i) The quota of cotton piece goods for the period between the date on which the present Indian customs duty on cotton piece-goods will be reduced to 50 per cent., and April 1 on which the First Piece Goods Year begins shall be the proportionate fraction of the quantity that would have been allotted to the whole Piece Goods year from April 1, 1933, to March 31, 1934, on the basis of the quantity of Indian raw cotton imported into Japan in the cotton year of 1933 (January 1 to December 31).

(ii) The quota for this period and the first half-yearly instalment of the first piece-goods year quota shall be consolidated into one for the period of approximately nine months ending at the end of September, 1934.

(6) Enforcement of the new agreements.

(a) Separation of Burma. It has been agreed upon that the terms of the new treaty shall remain in force throughout its full term whether or not Burma is separated.

(b) Duration of the new treaty. It has been understood that the new treaty shall be signed as soon as possible in London by the respective representatives of the Japanese Government and the British Government. The treaty shall come into effect immediately after the exchange of ratifications and shall remain in force until March 31, 1937.

(Continued from page 207)

the import trade are relevant only in finding out whether the burden of protection imposed upon the consumer is not more than it need be, and whether the equalisation of conditions of competition between the importer and the local producer will not help the maintenance of a fair selling price and prevent the exploitation of the consumer by the protected producer. It will follow from this that no action in regard to the import duties should be taken merely out of consideration for the import trade, and that any action taken in this regard will have to be justified either on the ground that the consumer needs, and is entitled to, relief, or on the ground that the additional protection afforded by the surcharge is not needed by the indigenous industry and may tend, if continued, to impair its efficiency."

SMALL INDUSTRIES AND JAPANESE COMPETITION

By N. R. SARKER

In view of the conclusion of the Indo-Japanese Trade Agreement and the introduction of the Amendment to the Tariff Bill, it is necessary that the position of the small industries should be thoroughly appreciated. The following notes on the position of these industries, prepared by Mr. N. R. Sarker in the earlier stages of the Indo-Japanese Trade negotiations and deliberations will be found to be of much interest.

CHEMICALS

Even so late as 1931-32 there were hardly any imports of chemicals from Japan, except, comparatively speaking, a very small quantity of Potash Alum. Since 1932-33, however, taking advantage of the depreciated yen, not only are other new chemicals being imported from Japan, but these are also seriously competing with indigenous manufactures. The articles in respect of which the competition is most acutely felt are given below together with the prices of Japanese imports and of imports from other countries, as compared with the cost of production of indigenous manufactures (excluding profit).

	Japan	Other countries	Local cost of* Production
Potash Alum ...	3 13 8	5 4 10	5 4 0
Magnesium Sulphate ...	2 10 0	3 4 0	4 0 0
Ferrous Sulphate ...	2 0 0	2 6 0	3 0 0

The fall in the price of Japanese chemicals as an effect of the depreciation of yen is unmistakably registered in the phenomenal increase of the import of Japanese alum in 1932-33 as compared to the previous years and also in the import of other new chemicals like Magnesium Sulphate and Ferrous Sulphate from Japan in 1932-1933.

	Quantity			Value		
	1930-31	1931-32	1932-33	1930-31	1931-32	1932-33
Import of alum. cost	400	...	3,300	2,300	...	12,717
Mag. Sulpt.	...	...	100	...	...	400
Fer. Sulpt.	...	...	1,000	...	...	4,000

---

*The estimated cost as arrived at by the Tariff Board is equal to these and indeed higher in some cases than the estimates of cost given.

‡Apparently the average price calculated according to these prices and the corresponding quantities is in excess of the local cost of production as shown in the previous table. This, however, does not warrant the conclusion that the imports from Japan do not compete with indigenous manufactures. As the prices set forth are taken on an average representing varieties of qualities of which the prices are at marked variance with one another, the average cannot be regarded as a safe basis for comparision in the case Mg. sulpt. and Ferrous sulpt. Actual competing prices have been given in the previous table, which have been further lowered in recent quotations.

A copy of Prospectus has been filed with the Ass[illegible]t Registrar of Joint-stock Companies, Madras City.

SOUTH INDIA SUGARS, LIMITED

(Incorporated under the Indian Companies Act of 1913.)

AUTHORISED CAPITAL - - - - Rs. 10,00,000

Divided into 40,000 Preference Shares of Rs. 10 each, Rs. 4,00,000 and 60,000 Ordinary Shares of Rs. 10 each, Rs. 6,00,000

Payable as follows :— On Application Rs. 2-8-0 On Allotment Rs. 2-8-0
and the balance in two calls of not more than Rs. 2-8-0 per share, as and when required by the Company at intervals of not more than two months.

The said Preference shares shall confer on the holders thereof the right to a fixed non-cumulative dividend at the rate of 7 per cent. per annum, on the capital for the time being paid thereon to be calculated on the respective calls from the respective dates of payment thereof; and the right in any winding up of the Company to repayment of capital in priority to Ordinary shares.

Of this 10,000 Ordinary shares of Rs. 10 each have been subscribed for by the Directors and their friends before the date of this Prospectus.

DIRECTORS:

T. ADINARAYANA CHETTIAR, Esq., Bar-at-Law, "Baramahal", Extension, Salem.
S. A. RAMASAMI AIYER, Esq., B.E., C.E., M.I.E., Consulting Engineer, 7, Crescent Road, High Ground, Bangalore.

PROSPECTUS

The Company has been formed to carry out the objects set out in the Memorandum of Association and particularly for the purpose of carrying on the business of manufacturers, refiners and dealers in sugar from cane, beet, palmyra jaggery and other sugar preparations and all by-products consequent on such manufacture.

It is intended to erect and equip a sugar factory of the latest type close to Kallakurichi in South Arcot District, Madras Presidency situated eight miles from the Railway Station of Chinnasalem (on the Salem-Vridhachalam line) and connected by excellent roads with the important market centres of South India, like Madras, Cuddalore, Salem, Trichinopoly, etc. Railway connection between Chinnasalem and Tiruvannamalai through or in close vicinity of Kallakurichi is also in prospect. The area around Kallakurichi has been noted for sugarcane-cultivation for several years past. The soil is suitable and irrigation facilities adequate. The area under cane cultivation is at present about 2,000 acres; but with the setting up of an up-to-date factory and refinery in the neighbourhood, it is bound to exceed 3,000 acres at which it stood until recently. A regular and continuous supply of sugar-cane within easy reach of the factory is thereby assured.

Government have recognised the necessity of granting protection to this industry and have imposed a protective duty on all foreign sugar imported into India up to March, 1946, and thus the Company will have the benefit of such protection for a sufficiently long period from the commencement.

The factory will be initially equipped with a plant capable of crushing 250 tons per day, provision being made to increase the capacity later to about 350 tons per day, at a comparatively small additional cost.

The sugar-cane-crushing season lasts for a period of 120 to 130 days in a year and the estimate of the working of the factory which is given below is based on the present-day price of cane and sugar and on the basis that the factory will be engaged in the conversion of sugar from cane for the above period of 120 days in a year. It is also proposed to employ the machinery and staff in refining jaggery during the rest of the year.

RECEIPTS:		
3,000 tons sugar at Rs. 225, ex factory	Rs.	6,75,000
EXPENSES:		
30,000 tons cane, at Rs. 12 per ton	Rs.	3,60,000
Bonus to cane-growers	,,	30,000
Depreciation	,,	30,000
Cost of Manufacture (salaries, wages, office expenditure, including stores, etc.)	,,	75,000
Total	Rs.	4,95,000
DEDUCT:		
Managing Agency Commission, including allowance	Rs.	30,000
Tax and Reserve	,,	30,000
Dividend on Preference Shares	,,	22,750
Total	Rs.	82,750
Leaving a net profit of (about)	Rs.	97,800

available for the holders of the Ordinary Shares.

It will be seen from the above that the Company will be able to declare dividends as high as those declared by existing Companies.

The estimated cost of the factory with the necessary buildings, equipment, etc., will be about Rs. eight lakhs, provision being made therein for working capital.

The Management of the Company, subject to the control of the Board of Directors, is to be entrusted to the firm of Messrs. Aiyer and Chettiar and they shall hold the said office for a period of fifteen years from the Incorporation of the Company.

The qualification of every Director shall be the holding in his own name, 250 shares (either Preference or Ordinary) in the Company of the nominal value of at least Rs. 2,500. Each Director shall be paid as remuneration for his services such sum not exceeding Rs. 25 for every meeting of the Directors at which he shall be present besides his travelling expenses.

Only the Directors, Messrs. (1) T. Adinarayana Chettiar, (2) S. A. Ramasami Aiyer, (3) V. S. Kunjita Padam and (4) N. V. Krishniah Chetty are interested in this Company to the extent that they are partners of the firm of Messrs. Aiyer and Chettiar who are the Managing Agents of the Company.

An agreement was entered into by the Company with Messrs. Aiyer and Chettiar on the 25th day of December, 1933, appointing the latter as its Managing Agents for a period of fifteen years on a fixed monthly remuneration of Rs. 750 and a Commission of 10 per cent. on the net profits in each year and on the terms and conditions stipulated in it, a copy of which is available for inspection at the Registered Office of the Company during office hours.

The minimum subscription on which the Directors may proceed to allotment is 20,000 shares of either class of the nominal value of Rs. 2,00,000.

No shares have been allotted or proposed to be allotted otherwise than for cash. No promotion money has been paid or is intended to be paid.

The Company will bear and pay the preliminary expenses of and incidental to the incorporation and establishment of the Company and it is estimated that such expenses will not exceed Rs. 10,000. A Commission which shall not exceed 5 per cent. will be allowed on the face value of the shares secured.

Application for Shares should be made upon the form accompanying this Prospectus and should be forwarded with the deposits direct to the Company's Registered Office at Madras or at any office of the Company's Bankers or at their branches.

The allotment of shares is entirely in the discretion of the Directors. Where no allotment is made the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the surplus will be applied towards the remaining payments. Failure to pay future instalments on shares allotted when due will render previo[illegible]ents liable to forfeiture.

The following is the provision in the Articles of Association relating to the Votes of Members :—

> Art.—16. Subject to any special rights or restrictions for the time being attaching to any special class of shares, at such General Meeting at which he is entitled to be present and vote, every member present in person shall on a show of hands, have one vote only and every member present in person or by proxy shall on a poll have one vote for every five Ordinary shares and one vote for every five Preference shares held by him.

A Copy of the Memorandum of Association is included in this Prospectus and forms a part of it.

Shares Certificates will be issued within three months from the date when the share amount is fully paid up.

Copies of the Prospectus and Forms of Application can be obtained at the Registered Office of the Company or at the following places :—

Although the quantities of the import, as set in the above table, may not appear to be so considerable as to threaten a substantial displacement of indigenous manufactures, the figures for recent months tend to show a progressive increase of imports from Japan, and further large shipments are expected in the near future according to the market information of large orders placed with Japanese manufacturers. The smallness of available figures does not in any way minimise the gravity of the situation, which, as previously stated, is the outcome of the depreciation of yen which reduces extraordinarily the price of Japanese chemicals in India.

Naturally, in these circumstances, the revenue tariff of only 25 per cent. (omitting the case of Ferrous Sulphate for which the duty has been fixed at 2½ per cent. only) ceased to give any protection to the indigenous industry. Apart from the question of substantive protection, it is urgently needed at this moment to restore the status quo as prevailing in 1931 in regard to the C. I. F. price of Japanese imports, by adopting necessary measures to counterbalance the effects of the depreciated yen. The extent of the protection required in this regard may be roughly measured by the difference between the declared average values of 1931 and 1933, or, where no figures are available for the former, on the basis of the difference between the latest quotation of C. I. F. price of Japanese imports in rupees and the rupee equivalent of the same at the rate of Rs. 137 : 100 yen.

EARTHENWARE & PORCELAIN

The manufacture of earthen and porcelain wares in India, which is yet mostly confined to Bengal among all the provinces in British India, has been most seriously hit by the drastic reduction of the price of Japanese goods owing to the depreciation of yen. The potentiality of the indigenous industry, as well as its inherent strength to withstand foreign competition in normal times, are unquestionable. All the raw materials such as China clay, felspar, quartz, fire clay, coal and coke are available in abundance within the country and the most representative concern in Bengal, the Bengal Potteries Ltd., is being run on modern lines with up-to-date technical equipment. Though it is not to be counted with a large number of similar concerns, this firm is to be regarded as a model institution of the type, with a capacity of turning out a variety of Porcelain and earthenwares worth Rs. 6 lakhs every year. The efficiency of the industry can be easily guessed from the fact that **its manufactures are about 33 per cent. cheaper than goods imported from Europe** and could effectively compete even with Japanese imports had Japan continued on gold. (Vide Appendix I). The heavy and continuous depreciation of yen has, however, completely undermined the position of the indigenous industry and has, in fact, led it into a state of suspended animation owing to the alarming fall in the price of Japanese goods. The fall in price has in respect of particular articles been more than 60 per cent., and the prevailing tariff of 30 per cent. has, therefore, failed to give any protection to the indigenous indusstry against the competition of Japanese goods, the import of which has marked a phenomenal increase from 1931-32 to 1932-33, recording a rise in value of 100 per cent.

To save the industry from complete collapse, in the circumstances, it is extremely necessary, that immediate steps should be taken to counteract the effects of the depreciated yen which has brought the Japanese goods to a ruinously low level. It may be suggested in this connection that the most effective way of achieving the end in view would be to impose a compensatory exchange duty on imports from Japan, failing which a specific duty sufficiently high to bring the price of Japanese goods to the level of the fair selling price of indigenous goods, should be imposed.

MINOR AND MISCELLANEOUS INDUSTRIES.

What protection may mean to Japanese Exports.

1. It is undeniable that the various minor and miscellaneous industries producing such articles as are imported from Japan have been seriously affected by the alarming fall in the price of Japanese goods owing to the depreciation of yen.

2. The demand made by the affected minor and miscellaneous industries for taking necessary steps to counterbalance the effects of the depreciation of yen is urged solely by the motive of self-preservation and is not influenced even in the remotest way by any idea of excluding Japanese goods.

3. Though the imports of Japanese goods into India have increased remarkably during the last two years on account of the depreciation of yen, the volume of these imports is not likely to suffer any appreciable shrinkage even if the yen were to revert to its parity level of exchange, for the following reasons:—

(a) The indigenous industries cannot meet but a fraction of the entire demand of the country;

(b) Japanese goods are as a rule cheaper than other foreign imports and are such as the masses with their low purchasing power must prefer to other foreign imports;

(c) The imports from Japan constitute at present, in respect of most of the articles, a small percentage of the total imports of India, which shows that if the Japanese manufacturers can keep the price of their goods at a moderately low level by dint of their superior technical efficiency, they will find a real scope for the increase of their exports to India within the limits set by the total imports of India and the potential expansion of the indigenous industry. (Vide Statistical Appendix).

4. It is only in respect of cotton hosiery that exports from Japan to India accounting at present about 97 per cent. of the total exports of underwear and 67 per cent. of the total imports of stockings and socks in India may possibly suffer any diminution. But even this loss should not be exaggerated as the Japanese exports of these articles to India account for only 27 per cent. in the case of underwear and 20 per cent. in the case of stockings and socks of the total exports of these articles from Japan.

GLASS INDUSTRY

The glass industry in India has been one of the worst victims of the inroads of Japanese goods facilitated by the recent depreciation of yen. The industry may be said to be fairly well developed as will be testified to by the variety of articles produced by indigenous factories. (Appendix I). The inherent strength and potentiality of the industry are markedly superior to many others; and it is significant that with a revenue tariff of only 25 per cent. the indigenous factories could place in the market their manufactures at a price even lower than that of Japanese goods, till the end of 1931-32. (Appendix II).

Since, however, the exchange value of yen had begun to fall, a continuous decline in the price of Japanese goods has set in, being followed by a progressive increase of the supply of such goods in the Indian markets. (Appendix III). The price of Japanees glasswares, except perhaps of sheet glass which is not manufactured on a large scale in India, has gone down even much below the cost of production of indigenous factories as is illustrated by the fact that while the cost of production of hurricane globes in some of the fairly large-sized factories in Bengal is Rs. 12-3-0 per gross, such globes of Japanese manufacture are being sold in the Calcutta markets, at Rs. 9-8-0 per gross even after the payment of the present 25 per cent. duty, (expect for bangles and beads and false pearls on which the duty is 50 per cent.). (Appendix IV). The indigenous factories have already sustained heavy losses owing to the abnormally low prices of Japanese goods and are sorely in need of an effective check on the inroads of the depreciated yen. The degree of immediate protection needed against Japanese competition in the case of the glass industry is comparatively easy to ascertain. It will be noted from the comparative price statistics appended hereto that the indigenous manufactures could effectively compete with Japanese goods in 1931 according to the then prevalent prices. Any duty, therefore, on Japanese imports calculated to raise their prices to the 1931 level would give the necessary protection to the glass industry against the depreciation of yen.

APPENDIX I

Lists of articles manufactured by Glass Works in Bengal

1. Glass globes for Dietz Hurricane lanterns patterns.
2. Glass Chimneys 1" Slip for Wall lamps.
3. Glass Chimneys ⅝" Slip for Wall lamps.
4. Glass Chimneys Eureka Slip for Wall lamps.
5. Glass Globe pinemoon Nos. 1, 2, & 3 for table lamps or Platform lamp.
6. Municipal Oil Pots.
7. Chimneys 14" wonder for hanging lamps.
8. Chimneys 20" Favourite for hanging lanms.
9. Chimneys 30" Favourite for hanging lamps.
10. Chimneys 40" Favourite for hanging lamps.
11. Chimneys Duplex for table lamps.
12. Stoppered Glass bars from ½ lb capacity to 12 lbs cap.
13. Glass globes for Kitson lamps.
14. Glass globes for Autolux lamps.
15. Gas Shades.
16. Electric Shades (Irene Pattern).
17. Opal Langham Shades.
18. Opal Glass bowls.
19. Opal Glass tumblers.
20. Water tight well glasses 50 c.p., 100 c.p.
21. Bulkhead glasses with uange or without flange.
22. Adlake Chimneys.
23. Jena chimneys with holes.
24. Globes for Washington lamps.
25. Glass Lubricators (cup shape or cylindrica).
26. Specimen Glass Jars.
27. Museum Glass Jars.
28. Glass Jars for B.L. & M. Cells.
29. Rectangular Glass Jar.
30. Glass paper weight.
31. Gloy bottles.
32. Gas roof lamp globes 7⅝" dia.
33. Oil roof lamp globes (flat bottom).
34. One light globes for Electric fittings.
35. Globes for Duplex fittings.
36. Test tubes.
37. Syringes.
38. Glass tubes for Quinine tabloids.
39. Specimen tubes.
40. Conical Urine glasses.

Expenses per 1 ton of glass

1 ton of glass would give 26 gr. 8 doz. globes of a gross weight of 9 oz but of a nett weight of 6 oz.

All breakages in operations are duly taken into account.

The cost to produce one gross Hurricane globes packed in case of 1 gr. each will therefore be Rs. 12-3-0.

SOAP

(1) Toilet Soap.

The present revenue duty on imports of foreign soap is 35 per cent. on Non-British and 25 per cent. on British manufactures. Even apart from the question of the depreciation of foreign currencies this duty does not afford adequate protection to the Indian soap factories on account of the fact that the latter have to use essential oil, synthetic perfumes, oil paper, etc. of foreign manufacture on payment of a duty of 35 per cent., which if added to the packing charges, freight and importer's commission or profit comes to about 50 per cent.

The import duty must therefore be raised, in order to be affectively protective, to 50 per cent.

This amount of substantive protective duty is also justified by the prevailing disparity between the fair selling price of Indian factories and the C. I. F. price of Japanese imports for corresponding qualities of soap, as the following example will show:—

The price cost of production of the Standard Turkish Bath Soap in India is Rs. 13-12-9 per gross (Vide Appendix I). Adding a moderate profit of 10 per cent. to it, **the fair** selling price per gross comes to Rs. 15-3-0.

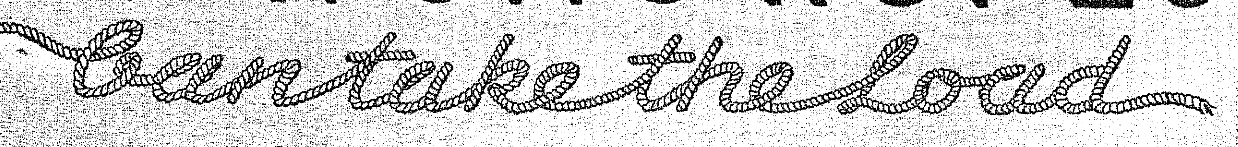
The C. I. F. price of the corresponding quality of soap imported from Japan, which includes the manufacture's profit, is Rs. 6 per gross at the rate of Rs. 80: 100 yen. This C. I. F. price would, if the yen were not depreciated, be

137/80 × Rs. 6 = Rs. 10-4-0.

The difference between Rs. 15-3 which is the fair selling price and Rs. 10-4 is Rs. 4-15 i.e. about 50 per cent. of the latter, which suggests that 50 per cent. duty would be effective even against Japanese competition, assuming the parity rate of Rs. 137 to 100 yen.

The substantive duty being fixed at 50 per cent., which will be applicable to all foreign countries subject to the grant of 100 preference to Great Britain,

HARTON'S ROPES



MANILA COTTON COIR WIRE
W. H. HARTON & CO., LTD.
(ESTABLISHED 1780.)
5, CLIVE GHAT STREET, CALCUTTA.
TELEPHONE: CAL. 311. TELEGRAMS: "HARTONCO."

an additional exchange equalisation duty will have to be imposed on imports from Japan on the following principle:

To revert to the case of C. I. F. price of Rs. 6 at the rate of Rs. 80: 100 yen again, the additional duty will be thus calculated :—

	Rs.	A.	P.
C. I. F. 7 yen 50 Sen at the rate of Rs. 80: 100 yen. ...	6	0	0
50% substantive duty ...	3	0	0
Total ...	9	0	0

The exchange equalisation duty will then be added to it being calculated according to the degree of fall from the basis of the parity rate of Rs. 137: 100 yen thus

137 − 80 = 57 + 28½ (which is 50% of 57) = 85:
100 yen.
yen 100: 7½ yen: Rs. 85:
15/2 × 85 × 1/100 = Rs. 6-6-7.

Adding this Exchange Equalisation duty the total import value of 1 gross of Japanese Turkish Bath Soap will come up to

	Rs.	A.	P.
C. I. F. Price	6	0	0
50% substantive duty	3	0	0
Exchange Equalisation duty ...	6	6	7
Total ...	15	6	7

Thus the method of calculating the duty would effectively meet the competition of Japan without raising the substantive duty too high against all foreign countries.

(2) **Laundry Soap.**

In the case of the laundry soap of which the cost of production is distinctly low in so far as a smaller proportion of imported materials need be used in its manufacture and also because it can be produced by comparatively cheap labour, the prevailing duty of 25 per cent. is estimated to give adequate protection if to counteract the effects of the depreciation of yen in respect of imports from Japan the above method of imposing an additional duty is adopted. The duty should however be declared protective.

Effect of general increase of the substantive import tariff on Toilet Soap

The proposed increase of the substantive duty from 35 to 50 per cent. is not likely to have any adverse effect on imports from Non-British countries other than Japan. About 70 per cent. of the imported soap comes from Great Britain which will still be in a position to take advantage of the Ottawa preference. The only other country which makes considerable export of toilet soap to India is France but even the imports of soap from this country are not likely to suffer any set back as a consequence of the slight increase of duty, because French soaps are always sold at a high price being esteemed as goods of superior quality.

APPENDIX I

Cost of production of cheapest quality of standard milled Toilet Soap manufactured by Boiled Process—Turkish Bath Soap. For simplification of calculation it has been divided into two parts—

(1) Cost of manufacture of the dry toilet base
(2) Cost of manufacture of the finished Turkish Bath Soap from this dry base.

1. Basis—100 mds. of fatty matter to be boiled per charge requiring 6 days of 8/10 house each.

THE SALT INDUSTRY

ADEN *VERSUS* KARACHI

The following is a summary of the reply of Aden Salt Manufacturers, to the representation of the Karachi Salt Association on "The Indian Salt Industry and the Aden Menace" dated 2nd January, 1934.

This reply contains an elucidation of the misleading and incorrect statements contained in the said representation of the Karachi Salt Manufacturers.

The Aden interests have genuinely tried to work in complete harmony and co-operation with the Indian interests. Dealing with the representation categorically, they admit that the information with regard to the 'Calcutta Market and the sources of supply' is correct. But with reference to the Aden supplies, the representation has not given a correct and adequate information. The Italian works were the first to start a salt factory at Aden, in 1886. They captured the trade which was in the hands of the foreign manufacturers and by their cheap prices and good quality won for them good popularity. In 1909 "Laljee's Indo-Aden Works," was started with purely Indian capital and under Indian management. There ensued competition between Foreign Combine which existed then and Indo-Aden salt. Prices were cut down from Rs. 71 to Rs. 41. To fight this cut-throat competition, Aden salt had to be sold under Rs. 35. The Foreign Combine could not succeed. Indo-Aden salt gained quick popularity.

The service rendered by the Aden works during the War, in the matter of salt supplies gained for it a good name; and the demand for Aden salt so speedily increased that in the year 1924-25, its consumption reached 36% of the year's total consumption. Since the Aden salt was being sold at cheaper rates, in the year 1927 the Salt Importers' Conference, at Calcutta allotted 38% supply quota and this continued till 1930. On the popularity enjoyed by the Aden salt in Bengal, the government were pleased to provide facilities for two more factories in Aden in the interest of Bengal consumers.

'Hajeebhoy Aden Salt Works Ltd.' and 'Pallonjee Dinshaw's thus came into existence with purely Indian capital and management. Because of standard quality and low rates these new concerns got a footing in the market in the teeth of foreign competition. The natural facilities at Aden for manufacture of salt contributed to the success of these factories. It is emphasised that, since India cannot get on without salt from Aden, the scheme for salt protection in force could not succeed. It is pointed out that in spite of protection all these three years, India could not produce the estimated yield.

The portion relating to the Indian Industry and cessation of foreign supplies' is fully supported by Aden Salt Manufacturers. They have never interfered with the progressive activities of the Indian works, but all the while they tried to produce and import only that portion which India could not produce. The statistics clearly show, that in the year 1933, 8.13 lakhs mds. of foreign salt, 9.57 lakhs mds. of Aden salt and 4.04 lakhs mds. of Indian salt have been consumed in India. While trying to increase the quantity the Indian works should not sacrifice the quality to realise their due share of the demand. Aden always has taken care to maintain a good quality side by side with the production. Aden is always prepared to make room for Indian concerns on marketing their produce beyond a certain reasonable supply quota which it claims; and this can be done on the lines suggested by the Hon. Sir George Schuster at the Simla Conference of May, 1932.

The apprehensions of the Indian works that, if Aden be allowed to enjoy the benefits of protection, their interest would be spoiled, are baseless, as the supply figures clearly denote that both Aden and India show comparative progress. Aden has always successfully maintained its supplies and quality and low rates compared to those that prevailed during the 'Foreign Salt' regime. The Karachi Manufacturers have made a misleading and mistaken statement in their representation by showing a heavy increase in the supply figures of Aden salt in 1931-32. In view of the important part played by Aden salt in the past 30 years in supplying Bengal with a suitable quality of salt at a comparatively lower rate, than what they had to pay under the foreign salt regime, they should be given proper attention. The production has always kept pace with the demand for Aden salt in Bengal from year to year.

The Aden Salt Manufacturers contradict the statement of the Karachi Association, that Aden salt has always enjoyed the full benefit of the high rates from the year 1862 onwards. As a matter of fact, the Indian Aden Works' success in securing a market in the face of foreign competition is purely due to the Aden Manufacturers who established the India's ability to supply her need of salt, as could be gathered from the reports made before the Tariff

LIBERAL PROMPT SECURE

Board. The Aden Industrialists are grieved to find that the Karachi interests are trying to kick the very ladder which has enabled them to rise. With regard to the variation in the selling rates, it should be pointed out the freight rate has a direct bearing on them.

It is brought out, that the Karachi Association has suppressed a fact in quoting an extract from the Tariff Board's observation, that Indian salt industry are not in a suitable position as to be given protection and they do not enjoy the facilities enjoyed by the Aden works and so there is no use in giving protection to the Indian works. This observation has actually come true as one can see, what the Indian works have been able to do.

The Karachi Association is warned, that if they are under the impression that their position would improve, if only the Aden imports are controlled, they are mistaken, for foreigners would take advantage of the changed position and invade the Indian market with cheap prices. Their demand for an inconceivably high supply quota has always shattered every move towards arriving at any workable arrangement, fair and just to all concerned. Aden has been always ready to extend to them every reasonable and fair co-operation. Karachi members have missed many opportunities and facilities to market their produce in the Bengal market. It is no fault of Aden; and the various allegations made against them are only made with ulterior motives. The Tariff Board on page 14 of their report shows the reason for the fall in the rate from Rs. 80 to Rs. 66. It was not the advent of the salt from the mainland sources of supplies that disturbed them but that was the New Roumanian salt that forced them to do so.

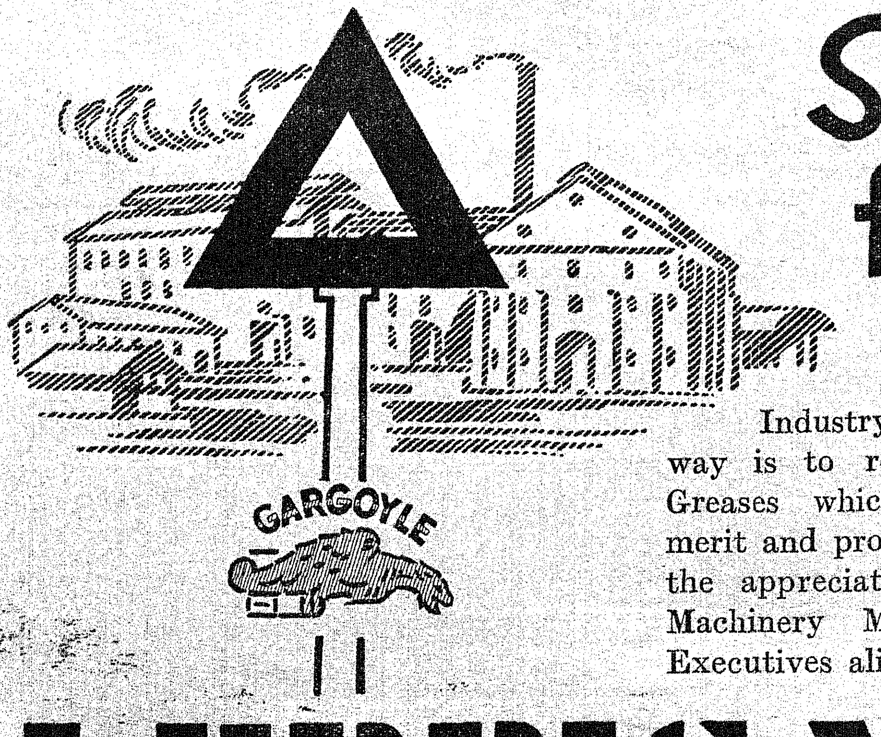
Aden's position is so safe, that it cannot be attacked by enemies even during wars and Aden salt works is always out of danger.

Sir George Schuster in his speech at the Simla Conference on May, 1932 has clearly explained that, if the Government were to interfere with free competition among Indian producers and among India producers (Aden producers included) as they had done with the free competition between Indian producers and foreign producers, they would do that in the national interest of India; but they should not do that for the sake of putting profits into the pockets of one set of manufacturers and producers at the expense of another.

The Aden Manufacturers are in full agreement with the representation submitted by the Indian Salt Association and they appeal for the re-establishment of the original 4½ as. import duty on foreign salt to enable the national salt industry to develop to the required level.

In summarising what has been said above, it should be remembered that Aden works are Government works paying royalty to the Government. The Karachi Salt manufacturers have taken together works at Porebunder, a native state, which does not contribute to the Exchequer and the mere fact that one party owns works both at Karachi and Porebunder should not justify any discrimination in the policy of the Government; for the reason that only those who contribute to the exchequer are entitled to enjoy the benefits. There out of the four factories at Aden are purely Indian owned and managed by Indians. Aden has always been able to maintain her regular supplies of standard quality-salt throughout the year. It is the Aden salt industry that has combated with Foreign salt quality and high rates and has enabled Indians to develope salt industry. It has been unanimously acknowledged, that for many years to come, India will not be able to be self-sufficient in her salt requirements, without Aden salt coming to their assistance. The importation of Aden salt is to the advantage of export trade of Bengal.

Finally the Aden manufacturers state that in view of the suggestion by the Karachi Manufacturers being incorrect and misleading, they hope that due justice would be done to them by conceding their fair and legitimate demand.



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike.

WORLD OF INDIAN FINANCE

Calcutta, February 2.

The tightness of money, which characterised the market last week, manifested itself in the current week also, the rate for call money being 3 per cent. and above, excepting for a comparatively temporary ease on Wednesday. As in the previous week, the tightness of money was not relieved in any measure by the large-scale release of funds effected through the purchases of intermediate sterling by the Government. In the absence of a genuine demand for trade purposes, it must be inferred that the monetary stringency was largely due to the activity in the giltedged market which was one of the outstanding features of business during the week. The Treasury Bill operations of the Government have resulted in setting free to the market only a few lakhs of rupees. On the other hand, the addition to the resources of the market by Government's purchases of sterling must have been very appreciable. Apart from the Rs. 1,33 lakhs on account of the acceptances at the last sterling tender, it seems very probable that the Government should have released at least another crore in the shape of intermediate sterling purchases.

Abundance of money (set free from sterling purchases) coupled with a further improvement in the Treasury Bill acceptance rate, which came down from Rs. 2-4-0 to Rs. 2-1-2 this week, has pushed up 3½ per cent. Rupee Paper by well over a rupee since last Friday. The opening quotation for 3½ per cent. Paper on Saturday January 27, was Rs. 83-5 which was the lowest for the week; and this was due to profit-taking. It is reported that business was done at the closing hours to-day at Rs. 85-1. While other securities have been comparatively steady during recent weeks, 3½ per cent. Paper was out of parity. Even at its present level of Rs. 85, 3½ per cent. Paper is still out of line with other securities. 4 per cent. 1960-70 loan, which is only 6 annas below par to-day, gives a redemption yield, after deducting income tax, of 3.34 per cent; 5 per cent. 1939-44 at its current price gives a redemption yield of 3.63 per cent., while 4½ per cent. 1955-60 at to-day's closing price gives a redemption yield, after deduction of income tax, of practically the same as 4 per cent. 1960-70. The running yield on 3½ per cent. Paper at Rs. 85, after deduction of income tax, is 3.42 and to bring the yield to a parity with 1960-70 there should be a rise of a further two rupees. There can be no doubt that bankers and professional operators take this view.

The sudden rise in the price of 3½ per cent. Paper from Rs. 83-12 yesterday to Rs. 85 to-day is, in a large measure, due to the bullish interpretation which the market has laid on the American stabilisation. While indications are that government securities in general will continue to be steady, it remains to be seen whether this hectic activity in 3½ per cent. Paper will outlast the next settlement. In recent times, novices and weak operators anxious to become rich in a night have supervened on a rising market at almost top levels and, without the grit and the means to stand, show panic at the slightest reaction and offer a tempting field to the professional bear who lies in wait for such timid game. This is a factor in the giltedge market which one should not ignore.

There is, however, another important consideration. On the eve of the giltedge slump of last Spring, 4 per cent. 1960-70 stood near par; 5 per cent. 1945-55 was about Rs. 114-8; and 3½ per cent. 1947-50 was at Rs. 96 or slightly over. The price of 3½ per cent. Paper at that time was nearly Rs. 89. Due to the upward movement which has taken place in the giltedge market in recent weeks, 4 per cent. 1960-70, 5 per cent. 1945-55 and 3½ per cent. 1947-50 have risen to very near the levels of last Spring. It is only 3½ per cent. Paper which, till this week, was fully five points below the highest level touched in the end of April, 1933. There have been special factors responsible for this laggard behaviour of 3½ per cent. Paper. The most important fact, however, is the constant interference of weak operators in a security which is the only one listed for forward delivery in Bombay. Genuine investment enquiry has shaped and governed the fortune of the other scrips. Speculative tactics have dominated the destiny of 3½ percent Paper. And bulls in the giltedge market have been, on the whole, a demoralised and timid lot, due to the stunning blow they received last year. Whenever there was rise in 3½ percent Paper, profit-taking would set in; and each advance has been regularly followed by reaction. The market psychology to-day is, however, greatly different. And as even on a yield basis, 3½ percent Paper should prove alluring, there is every prospect of an upward trend with a view to the narrowing of the gap that exists between the last highest price of 3½ percent Paper and current quotation. All circumstances taken into consideration, it seems safe to say that bullish rather than bearish influences will continue to dominate the giltedge situation.

The last week's statement of affairs of the Imperial Bank shows a rise in the Bank's cash from Rs. 15.09 crores on January 19 to Rs. 17.02 crores on January 26. There is also a reduction of Rs. 3 crores in the ways and means advances taken by the Government. These figures should, however, be treated as out-of-date as, in view of the usual month-beginning outgoings and the large purchases of sterling which Government have made, they should have had recourse to the Bank for further ways and means advances, especially having regard to the fact that the weekly offer of Treasury Bills has remained unchanged at Rs. 1½ crores. While, on the one hand, the vast improvement in remittance is helpful to the Government in strengthening their sterling balances, on the other hand the ways are means position in India will necessitate a reconsideration of the comparatively routine ways and means programme followed hitherto. An increase in the weekly offer of Treasury Bills or the re-introduction of intermediates which must be considered in connection with the large maturity of Rs. 10½ crores to be met this month may naturally have the effect of pushing the acceptance rates up once again and may, indirectly, have an adverse sentimental effect upon the securities market. The additional cost of borrowing can, of course, be compensated for by a stiffening up of the rate for sterling purchases; but it must be borne in mind that the recourse to Government for cover is largely dependent upon shipments of gold and it cannot be granted that the stream of gold would continue unbroken. It is reported that shipments of gold last week were about Rs. 1½ crores; the shipments to-morrow will afford a good indication as regards the future. Exchange continued firm at 1s. 6 1/16d., with 1s. 6 3/32d., available. As in the previous week, the tenders at the last sterling auction were over £47 million, the allotment being only 2 per cent. If sterling tenders continue on the same scale for yet another week, there is no reason why the weekly offer should not be increased as it is a sure token that the market shows signs of unbroken strength.

Exchange has been very firm all week. Money has remained extremely tight. The market should have sold to the Government anything like £1 million of intermediate sterling. Against the budgetted remittance programme of £21 million, sterling purchases from April 1, 1933 to January 20, 1934 came to £26.61 million. Between January 20 and February 2, another £4 million might have been remitted inclusive of the two weekly auctions. That is, the budget programme has already been exceeded by £10 million. There are still two months for the completion of the fiscal year. At the present rate, it looks as though the Controller of the Currency would succeed in remitting at least another £10 million. Sterling borrowings exceeded anticipations by £6 million. Excess sterling resources with the Secretary of State at the commencemnt of 1934-35 should, therefore, be of the order of £25 million. This is a position far, far stronger than what the Finance Member could have hoped for in his wildest dreams. £5 million has already been transferred to the currency reserves for the strengthening of the latter. In the next few weeks, further transfers are quite on the cards. An addition of £10 million to £15 million to the "external reserve" with which the Reserve Bank will start is, indeed, a most gratifying development.

There has not been much doing in the exchange market. Few export bills—very few, indeed—were offering on Friday. On the whole, it has been a very steady, but very uninteresting week.

The closing rates are: 1s. 6 1/16d., with 1s. 6 5/64d., freely possible for February T.T.; 1s. 6 1/32d., with 1s. 6 3/32d., possibly available for March T.T.; 1s. 6 1/32d., for April T.T.; 1s. 6d., May-June T.T.; and 1s. 5 31/32d., T.T. onwards.

Bills may be quoted: 1s. 6 3/16d., February; 1s. 6 5/32d., March; 1s. 6 1/8d., April-May; and 1s. 6 3/32d., onwards.

Money has been tight all through. The quotable rate for interbank call money was 3 to 3½ per cent. Firms' money for call, 3 days' and 7 days' notice was quoted ¾ per cent. Onemonth, twomonth and threemonth deposits were quoted 1¾ per cent. all through.

On both sides of the Atlantic there have been, during the week, official contradictions of the stabilisation agreement. Through good and through evil, the world has clung to this hope for nearly two months. And this hope has been sustained now by one report, now by another, every time gaining markedly in general currency. It flared up with the announcement of President Roosevelt's intention to revalue the dollar between 50 and 60 cents. But the flare-up has proved to be the flicker of the dying flame. In America, Mr. Henry Morgenthau, Secretary of the Treasury, has authoritatively stated that the Treasury has reached no understanding with London on the relation between sterling and the dollar. Asked whether he anticipated a currency war, Mr. Morgenthau is reported to have laughed and replied that "such a conflict might be costly to both countries." This is hardly reassuring to those who regard a currency war between Britain and America with anything but equanimity. Mr. Morgenthau has also declared that the Federal Reserve Bank would continue to be in charge of the exchange operations of the Government.

It is natural that one should connect this statement with his earlier regret at the absence of an equalisation fund which, he said nearly a fortnight ago, would have been very useful to him then. These together form a clear indication that the American Government really intend to proceed with their operations on the strength of the 2,000 million dollars of exchange fund. On the British side, too, Mr. Neveille Chamberlain has done his bit to dispel the idea that a stabilisation agreement has been reached or even the hope that the two governments concerned are endeavouring to fight competition between the American and the British equalisation funds. All that Mr. Chamberlain could say was: "We shall wait and see what operations the American funds "are relying on." And if it is any indication of what is in store for the international exchanges he also made a reiteration of the purposes for which the British exchange equalisation fund was instituted. He said that the purpose of the British fund was to correct temporary fluctuations in the exchange value of the sterling. "It had not been used to create artificial value for sterling for the purpose of returning to gold standard, or any other purpose," and as there was a good deal of misunderstaning on this matter he added "it would, in his opinion, be ineffective if so used." Mr. Neville Chamberlain also afforded the information that £350 million were still in the British fund and that he was not aware that Anglo-American conversations were contemplated with regard to their mutual obligations.

One is tempted to read between the lines and speculate on the motive of Mr. Chamberlain in repeating the purpose of the British Fund. If, on the one hand, it would serve to emphasise that the British Exchange Fund is not a fighting fund, in the sense that it was, or could ever be, used for taking the offensive against other currencies, it also indicates a determination that alterations in the exchange value of sterling consequent on the deliberate operations of other parties would be resisted with the utmost determination. There is, it must be said, the usual diplomatic colour in the utterances of the British Chancellor of the Exchequer, while Mr. Morgenthau has taken less pains to disguise his readiness for a bout with Britain on the exchanges.

Events in America, however, are moving but slowly. On January 30, it was known that President Roosevelt had signed the Monetary Bill but that the devaluation proclamation would not be issued till a day or two later. The executive orders necessary for the Treasury taking charge of all gold have been issued. And these regulations authorise the Reserve Banks to acquire from the Government by redemption of gold certificates such amounts of gold bullion as the Treasury deems necessary for the purpose of settling international balances and maintaining the equal purchasing power of every kind of currency in the United States. Under these regulations banks may acquire gold from abroad or from the United States and gold may be held, transported, imported, earmarked or kept in custody for foreign or domestic account for the above purpose and imported gold may be re-exported without licence if it remains in the custody of the customs, otherwise a licence must be obtained.

And as for transactions abroad, it is learned during the week that America continues to acquire large amounts of gold in the London market. Our Overseas columns refer to similar large-scale purchases during Air Mail week and explain that the purpose of such acquisition of gold is to counteract the forces tending to put up the exchange value of the dollar. According to a special cable to the *Englishman* dated January 26, nearly 10½ million of gold had been sold in the London market during that fortnight and on January 25th, £1,600,000 was disposed of, which is believed to be a record for any single day. The belief is widespread in London City circles that the bulk of this gold was acquired by Washington authorities who have been selling dollars for gold. A reference to the table at the top will show that in spite of such large scale purchases of gold the cross-rate has been well below the 5 dollar limit. It would be necessary to explain this strength in the dollar which assuredly is quite unwelcome to the authorities in America. It is learned that during Air Mail week the cause of the strength of the dollar was the repatriation of American funds on a large scale, and it may be said therefore that the continuance of the return of funds is the likeliest explanation of the strength of the dollar in the face of American purchases of gold in the London market. One cannot be quite sure that confidence in the dollar has been revived to the extent of creating such a heady flow of capital to America. Is it possible that the British exchange fund has already begun hostilities and made a good stand by depressing both the sterling-franc and the sterling-dollar rates?

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

COMMUNIQUES AND RETURNS

TREASURY BILLS

The Controller of the Currency in a Press *communiqué* says that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, January 30. Total amount offered was Rs. 3,66,25,000. Tenders at Rs. 99-7-9 and above were accepted in full and those at Rs. 99-7-6 were allotted approximately fifty-four per cent. Lower tenders were rejected. Total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 2-1-2 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, February 6. Successful tenderers should make payment on Friday, February 9. Other conditions are as usual.

STERLING TENDERS.

In a press *communiqué* the Controller of the Currency says :—On Wednesday, the 31st January, 1934, tenders to the amount of £47,450,000 (forty-seven million four hundred and fifty thousand) at 1s. 6 1/16d. were received and allotted approximately 2 per cent. (two per cent.).

£1 million (one million) will be offered for tender on Wednesday, the 7th February, 1934, on the same conditions as previously announced.

THE GOLD STANDARD RESERVE

The balance of the Gold Standard Reserve on the 31st December, 1933, amounted to £40,000,000 and was held in the following form :—

	£

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Feb. 1.

With the exception of government securities and, to some extent, jute mills shares, trading in the Stock Exchange was only on a limited scale without any fresh feature. Due presumably to covering operations by 'bears' from Bombay side, Giltedge section ruled firm and a fairly large business was put through. The jute mills shares opened quiet but steady in sympathy with easier commodity prices; but, as the session progressed, rates improved. The close was again quiet. Cotton shares remained dull and uninteresting; while in coal, the recent selling has been found to have been overdone and rates kept steady at the decline. Among miscellaneous Industrials, engineering concerns shares remained steady while sugar mill shares were irregular. Teas were very steady in the majority of instances although some profit-taking was in evidence here and there.

Government Securities

Giltedge section ruled firm during the past week, presumably in view of "Bear Coverning" from Bombay owing to Friday the 2nd February, 1934, being their settlement day. Although, during the earlier session, 3½% Government Paper has shown comparatively less activity due to the overbought position in Calcutta and was quoted round Rs. 83-8, the price advanced sharply as the session progressed when more buying power developed. 3½ per cent. Paper rose to Rs. 84-5 at the time of writing.

3½% New Loan (1947-50) also was firm roundabout Rs. 95-12. Among the longer-dated Loans, 4% (1960-70) met with more support and was quoted at Rs. 99-8. 5% Loan (1945-55) also improved to Rs. 114-2.

Among short-dated issues, 5% Bonds (1935) was in request upto Rs. 103-11 while there were buyers for almost all the medium-dated issues, particularly 5% Loan (1939-44) at round about Rs. 106-8.

Fixed Interest bearing securities

Jute mills preference shares continue to receive good support while among the other preferences, Bengal Nagpur Coal 7 per cent. issue improved to Rs. 118 and New Victoria Cotton 6% issue kept steady at Rs. 4-2. Bengal chemical (7% Preference) was dealt in at Rs. 14-10; Bengal Telephone (7% Preference) was marked at Rs. 14; Burn & Co. (6% Preference) kept steady at Rs. 97; and Indian Standard Wagon (7% Preference) at Rs. 111-8. Kumardhubi Engineering (7% Preference) was dealt in, fairly freely, round Rs. 38 and Tata Iron & Steel (2nd Preference) at Rs. 116. Bengal Paper 'A' Preference changed hands at Rs. 124 while Namburnadi Tea 10% Preference and Tezpore Tea 8% Preference. Preference were quot quoted at last levels.

Only a small turnover resulted in Debentures. Calcutta Port Trust issues were in offer while no business was reported in Calcutta Municipal debentures. Among Industrial issues, 5½% (1915-40) Dalhousie Property changed hands at Rs. 96; 7% (1919-35) Gohpur Tea debenture found buyers at Rs. 89-8 *after a long interval against the* last listed rate of Rs. 88.

Other Investment Stocks

Imperial Bank's fully paid up issues remained practically unchanged and there were small buyers round Rs. 1,223-8; contributory shares changed hands in fair quantities round Rs. 307. A transaction was reported in Allahabad Banks (ordinary) shares at Rs. 360 and Bank of India was marked at Rs. 104-8.

Among transportation issues, light railway shares has faded into insignificance and only a very limited business was put through. Howrah-Amta recorded a deal at Rs. 87. Mymensingh-Bhairab Bazar changed hands at Rs. 80 and Sara-Serajgunge was marked at Rs. 79 while there were a number of other shares on offer without any response from buyers.

Cotton

Dull conditions have obtained in this section and only a small turnover resulted. Bengal-Nagpur (ordinary) was marked at Rs. 17 while Dunbar (ordinary) and Kesoram (ordinary) were on offer at Rs. 108 and Rs. 3-2 respectively but no buyers appeared.

Coals

Although the recent selling pressure has been arrested and rates kept fairly steady at the decline on the news that coal companies in Bengal and Behar fields have escaped any serious damage as a result of the earthquake; there was very little movement in share values, it appears, owing to the pessimism as regards the materialisation of the proposed coal restriction scheme at an early date. Also the recent *communique* from the Railway Board regarding the reduction of surcharge and also the basic rate for Bengal Coal had the bearest effect on the market.

On the other hand, the latest report from the coal-fields indicate much reduction of stocks on collieries on account of shortage of labour, as a certain percentage of labour has left for the earthquake areas of North Behar.

The tone at the close was steady with Burraker (ordinary) at Rs. 13-4, New Beerbhum (ordinary) at Rs. 11-12, Katras Jherriah at Rs. 28-8 and Raneegunge at Rs. 41. Among lower-priced stocks, Ghusick & Musllia Samla and Talchar were enquired for at their present low levels.

Jute

In sympathy with easier commodity markets and on account of the lack of support from outside jute mill shares opened quiet on Monday with Howrah's at Rs. 52 and Kamarhattys at Rs. 540. As the session progressed, more buying power developed owing to the rise in Hessians and Jute and Howrahs touched Rs. 52-14 and Kamarhattys Rs. 554 on Thursday when, on account of an unconfirmed rumour of the fixing of the price of dollar in terms of gold to the disadvantage of export, rates receded sharply and a quieter tone prevailed. 9 Porters Hessians, which improved to Rs. 9-13 and Jute to Rs. 31-10, sagged to Rs. 9-10 and Rs. 30-12 respectively at tne time of writing. Howrahs receded to Rs. 52-7 and Kamarhatty to Rs. 548.

Although, owing to less outside support, trading in the higher-priced stocks was confined to small lots, there has been a fair demand for Alliance, which is expected to pay a dividend at the ensuing half-year and Bally which is doing very well. The next dividend of Howrahs is also expected to Rs. 2 per share.

The statistical position of the industry, so far, is very sound and mills are making a fair margin of manufacturing profits ; and if nothing untoward happens, the prospect is assured for some time.

American developments, too, will prove beneficial if they are understood properly.

Electricals

A fair business was put through in the shares of the public utility concerns. Agra Electric changed hands at Rs. 103. Benares kept steady at Rs. 11-8, so also Bareilly at Rs. 11. Bengal Telephone (ordy.) changed hands in fair quantities at Rs. 14-4. Upper Ganges Electrics were mentioned at Rs. 8-10.

Engineering

On the expectation of getting orders involving a large amount of capital for the reconstruction of Buildings, Machineries and Bridges in the devasted areas in North Behar, Engineering concerns shares moved up sharply and a fair activity prevailed.

Arthur Butler kept very steady round Rs. 6 ; Burn & Co., advanced to Rs. 190 but eased off later to Rs. 187. Indian Iron Steel remained firm round Rs. 5-8 and Bengal Iron at Rs .4-10 on London advices. Indian Standard Wagon (ordy.) kept steady at the decline at Rs. 48 and Britania Building & Iron and Kumardhubi Engineering at last levels. Marshalls kept steady at Rs. 1 on prospects of Tea Industry while Saran Engineering was better at Rs. 6-8.

Sugars

Sugar mills shares were rather irregular. Samastipore, which, it appears, has been hit the hardest, opened on Monday at Rs. 8-8 and improved to Rs. 9-4 on Wednesday, but on Thursday again reacted to Rs. 8-12. No business was reported in Ryam, while Champaran, which sustained a certain amount of damage, fluctuated between Rs. 19 and 20 closing at Rs. 19-4. Balarampur, which is reported to be almost entirely unaffected, touched Rs. 11 but again receded to Rs. 10-8. Carews were quoted at Rs. 17 and Cawnpore, which has escaped lightly, was marked a Rs. 30-12.

Miscellaneous

A moderate number of dealings was reported in the miscellaneous industrials. Bengal Potteries kept steady at Rs. 3-4 and Reliance Fire bricks at Rs. 7, Triton Insurance was slightly easier at Rs. 183. Britania Biscuits advanced to Rs. 8 and Burma Corporation to Rs. 8-14. Bengal Paper (ordy.) accounted for a deal at Rs. 70 while Midnapore Zemindary (ordy.) kept steady at Rs. 63.

Shipping companies shares kept fairly steady. Bengal-Assam Steamship was quoted Rs. 180 and Port shipping Rs. 12-8.

Tea

A fair and comprehensive business was reported in tea shares and prices on balance were on the up-grade although a slight profit-taking was noticed here and there. It is reported that the actual tea bushes are not likely to have suffered by the earthquake and the potential earning power of all gardens is, therefore, considered to be unimpaired.

At the sales, a strong tone was in evidence both here and in London although, in certain cases, some irregularities were in evidence.

Bishnath, Birpara, Jutliberi, Naga Hills, New Terai and Tezpore were popular features.

(*Review of the Bombay Stock Exchange on page 258.*)

JUTE AND JUTE GOODS

JUTE

During the week under review jute market has ruled quiet but steady. May futures which closes at Rs. 31-8 is ruling about the same to-day the highest and lowest prices touched in the meantime were Rs. 32-8 and Rs. 30-12 respectively. The high levels that were reached during the previous week could not be maintained in absence of trade support. Bull liquidation was therefore freely brought about for the same reason and values therefore declined. The undertone of the market seems to be healthy the technical position also becoming more sound.

Business in firsts was done upto Rs. 29-8 for February shipments the quotations for ready firsts at the time of writing are Rs. 28. Small business was done in good Indian Jat LR and XLR at Rs. 4-10 and Rs. 4-2 per maund and for District at annas four less with small sellers at the close. The arrivals from upcountry centres at the decline of values have been reduced and moffussil quotations at the moment are above the Calcutta parity. But mills on the contrary are holding off at a rise and are expecting lower prices in near future.

The technical position of the market is sounder than it was a few weeks ago. Long and tired bulls have liquidated their holdings. At the decline trade is inclined to buy and genuine holders are not in a mood to further discount prices. Stocks however in Calcutta are pretty large and unless a goodly part thereof has been cleared the selling pressure remains there.

JUTE MANUFACTURES

Hessians market has ruled very irregular throughout the week. Opennig easy at about Rs. 9-10 the market ruled easy on long liquidation and selling by second hands.

The exports during January were disappointing and consequently there were plenty of short sales. Later however the market improved on better American advices and on fair business resulting in hessians as well as heavy goods.

Total reported sales for the week ending Saturday the 27th January, 1934.

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From our correspondent)

Bombay, Feb. 1, 1934.

Cotton prices everywhere have showed improvement during the period, but locally the rise is spectacular and sensational. New York May, from its last close of 11.25, touched highest and lowest at 11.62 and 11.15 respectively and closed yesterday at 11.53. Liverpool May, from its last close at 5.72, closed yesterday at 5.89 after moving within 5.92 and 5.72. Sterling dollar rate moved quietly within 4.95 and 5.03. The recent cold spell has seriously damaged Broach crop stimulating heavy buying in local market, Broach rate having appreciated by wellnigh ten rupees, highest being touched to-day at 206-4-0.

Early in the week following the reactionary trend of American Cotton market Indian Cotton ruled easy at about Rs. 196, the highest and lowest of the week were Rs. 202 and Rs. 194-8 respectively. The discouraging attitude of the secretary of agriculture in U. S. A. towords the Bank head Bill and conflicting opinions about its successful passage had a weakening effect on the market. The reactionary trend however could not upset the long view. The general belief has been that after all the curtailment in production of Cotton and raising the price level by means of currency and credit inflation will be carried out. This had a healthy effect on the market and towards the close a more buoyant feeling was noticeable. The New York stock Exchange has been showing considerable strength and a resistance against fall is distincly noticeable.

Technically the Bombay market position is also sound selling by long bulls and also against options have created a market where buyers will come at every decline.

After a good business from Japan during the previous week the demand from both, east and West, has been slack. But Indian Cotton is cheap on its present parity and the slightest buying move will push up the prices. Buying at every decline is therefore desirable.

The weather conditions have been unfavourable and long spell and cold is reported to have caused damage to Broach and Gujrat crop both in quality and quantity. It appears this will not have much effect on prices on the whole.

PIECEGOODS

The market during the week remained lifeless with very little business passing. With the exception of minor sales forward transactions were few and far between, and bazar dealers were in no mood to cover unless bargains were available being of opinion that current replacing costs were not on a safe basis. Traders had anticipated much better results for the month of January which generally brings us to the hot weather season, but this year due to the prolonged cold weather upcountry merchants have not submitted their requirements. Indigenous goods did well as regards replacements and fresh contracts were arranged for grey shirtings light whites and dhooties etc. Importers of Lancashire products experienced another disappointing week as regards actual turnover and further forward sales of Japanese goods have been for February-April shipment.

YARN

The yarn market during the week was less active as bazar dealers kept aloof having obtained their immediate requirements. The net turnover, however, has been shorter than that of the previous week and a restricted volume of business was concluded in Lancashire fine Egyptian yarns. There has been an all round depreciation in values due to upcountry demand having eased off to a considerable extent together with a restricted offtake. Raw material was quoted on a low scale the spot price of American at Liverpool having been reduced by several points.

BULLION

GOLD

(By Wire)

(From Our Correspondant)

Calcutta, Feb. 1.

Gold prices, which were gradually developing a strong tendency, flared up to-day on American gold price being raised to 35 dollars, it being quoted at 34.34 on the 15th and at 34.45 dollars on the 16th. Hectic trading was witnessed to-day with violent ups and downs. The London gold rates had improved from its last fixation at £6-12-1 by a shilling yesterday. The franc rate came to be quoted this evening at 78.21 from its last close on Thursday at 80-03. Local ready rate which had gradually improved from 32-8 to 32-15 by yesterday was quoted at 33-8 at 5-30 p.m. to-day. Prices are expected to soar up higher on account of American policy.

The market ruled steady touching Rs. 32-11 in the early part of the week but later on the market quietened due to bank's buying at higher rates and poor arrivals from upcountry. Stocks too, have been reduced both in Calcutta and Bombay. The London-Paris cross rate also ruled steady in the first part of the week but became quiet towards the close. Last week-end London market reported a record sale of £16 lacs worth of gold while the week before dealings were entered in to the extent of £55 lacs and £50 lacs. Bombay's shipment of gold last week was also unique amounting to Rs. 211 lacs. In spite of these heavy purchases by the U. S. A. the London gold market has moved very cautiously turning a deaf ear to the gold price raising policy of President Roosevelt.

The near trend of the market is steady to firm but the large sales of the yellow metal by the U.S.A. Government is likely to cause bearish factor in the speculative mentality of the public in the future.

SILVER

(By Wire)

(From Our Correspondant)

Bombay, Feb. 1, 1934.

The Silver Amendment to Gold Bill in America, which virtually provided for free coinage of silver, was defeated by the Senate there, but the narrowness of defeat (only by two votes) was viewed favourably by silver protagonists. However for the present, hope of silver is deferred. The London rate for ready improved from its last close of 19¼d. to 19 9/16d. New York ready price rose from 43 3/8 to 44 3/8 and was finally quoted yesterday at 44. The local rate for ready came up from its last close of 53-14 to 54-8, which is the rate prevalent to-day at 5-30 p.m.

The silver market has suddenly risen and a reaction is likely to set in. This, however, has made dealers nervous and they are very reluctant to operate at a higher level due to the rumours of the withdrawal of the silver duty. The local stock comprises 2800 bars with no offtake. The tone of the market is rather erratic and likely to move both ways. The London silver marked decline from 19½d. to 19 5/16d. The news received from Mexico regarding the signing of the silver agreement by President Rodriguez showed very little activity in the local market at the middle of the week but the reports of earthquake in Mexico, the silver producing countries caused the local market to advance from Rs. 54 to Rs 54-11 for ready and first settlement while second settlement quoted a premium of Rs. 2-12 per 100 tolas due to the rumours of a reduction in the importy duty in the coming budget.

TEA

The Calcutta Tea Broakers' Association's reports, dated 1st January, 1934:—

Sale No. 31 was held on the 29th and 30th January, 1934, as per particulars below:—

	With Export Rights.			For Internal Consumption.	
	1933-34.	1932-33.	1931-32.	Leaf.	Dust.
Offered ...	11,718	26,500	21,300	6,313	7,452
Old ...	11,140	24,984	18,970	6,213	7,421
Average ...	-/11/5	-/5/7	-/5/4	-/5/10	-/8/3

Quality generally was not up to previous sales. Although a few invoices possessed good autumnal character, many teas showed evidence of having been stored on the garden for a considerable period . Others were very brown in leaf and less valuable in liquor.

Demand was much more restricted than of late and the market was quieter all round. Prices for common tea up to As. 11-3, however remained unchanged, but above As. 11-6 sellers had to accept 3 pies less than previous rates to effect sales.

INDIAN TEA SALES

At the London auctions on January 24, 26,000 packages of Indian tea were submitted for sale.

There was rather a quieter demand. Clean common qualities were steady but other sorts were easier.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 13¼d., to-day's auction 13¼d. lb.; Common Broken Pekoe last auction 13¾d., to-day's auction 13¼d. lb.; Common Orange Pekoe last auction 13½d., to-day's auction 13¼d. lb.; Common Broken Orange Pekoe last auction 13½d., to-day's auction 13¾d. lb.; Common Broken Pekoe Souchong last auction 14¼d., to-day's auction 13¼d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 13½d., to-day's auction 13½d. lb.; Clean Common Broken Pekoe last auction 13⅞d., to-day's auction 13⅞d. lb.; Clean Common Orange Pekoe last auction 13⅞d., to-day's auction 13⅞d. lb.: Clean Common Broken Orange Pekoe last auction 14⅛d., to-day's auction 14⅛d. lb.: Clean Common Broken Pekoe Souchong last auction 14¾d., to-day's auction 13¾d. lb.

At the London auctions on January 29, 29,200 packages of Indian tea were submitted for sale.

There was a good demand but prices were lower, particularly for medium qualities, which were very irregular.

The following were the lowest prices fetched during the day's auction.

	Last auction lb.	To-day's auction lb.
Common Pekoe	13¼d.	12¾d.
Common Broken Pekoe ...	13¼d.	13d.
Common Orange Pekoe ...	13½d.	13d.
Common P. O. Pekoe	13¾d.	13½d.
Common B. P. Souchong ...	13¼d.	13¼d.

The following are the value prices:—

	Last auction lb.	To-day's auction lb.
Clean Common Pekoe	13½d.	13¾d.
Clean C. B. Pekoe	13⅞d.	13⅜d.
Clean C. O. Pekoe	13⅞d.	13¾d.
Clean C. B. O. Pekoe	14⅛d.	13⅞d.
Clean C. B. P. Souchong ...	13¾d.	13½d.

CEYLON TEA SALES

At the London auctions on January 30, 17,000 packages of Ceylon tea were submitted for sale.

There was a poor demand. Heavy medium qualities, particularly thin liquoring kinds, were easier. Teas suitable for export were most in request.

The following were the lowest prices fetched during the day's auction:—

	Last auction lb.	To-day's auction lb.
Common Pekoe	13¾d.	13¾d.
Common Broken Pekoe ...	14d.	13½d.
Common Orange Pekoe ...	14¼d.	14¼d.
Common B. O. Pekoe	14⅛d.	14⅝d.

SUGAR

The sugar market in Calcutta showed some improvement after several weeks and closed at six annas above last week's limit. On the news of the damage done to so many Indian factories dealers realised that not only were their stocks very low but owing to railway restrictions a large proportion of their normal source of supply was cut off. Towards the close, however, a more optimistic feeling prevailed and it is anticipated that there will be a rise in prices again when factories start competitive selling and bookings are resumed.

Prices for Java white at importing centres improved during the week and closed:—

GRAINS AND SEEDS

WHEAT

The wheat market remained steady throughout the week but supplies were comparatively small. Ready lots of Bengal and upcountry sorts were quoted at Rs. 2-14 to Rs. 3-9 per B md with gunnies according to their quality. Bengal offerings, however, were limited. Cawnpore and Punjab Ready quoted Rs. 1-15-6, May Beta, Rs. 2-14-9.

BENGAL WHEAT

The first forecast of the wheat crop of Bengal, 1933-34, estimates the total area sown at 145,400 acres as against 142,100 and 142,900 acres, respectively, in the corresponding and final forecasts of last year.

The forecast adds:—At the outset weather conditions were favourable for field operations and sowing generally commenced in the normal time. Subsequently dry weather in December was helpful to further sowings and growth of the crops. Present outlook is reported to be promising.

PUNJAB WHEAT

The first forecast of the wheat crop of the Punjab for the year 1933-34 points out that on an average of five years ending 1931-32, the area under wheat in the Punjab has represented some 28.8 per cent. of the total area under wheat in British India. The ratio of irrigated wheat acreage (a) in British India and (b) in the Punjab during the five years ending 1931-32 averaged (a) 39.5 and (b) 55.6 per cent. respectively.

The figures below give the estimated area in British districts up to the end of December, 1933, along with the actual area of 1932-33:—

	Irrigated Acres.	Unirrigated Acres.	Total. Acres.
Estimated area in 1933-34 ...	5,018,700	4,356,100	9,374,800
Actual area in 1932-33 ...	4,972,300	3,618,600	8,590,900

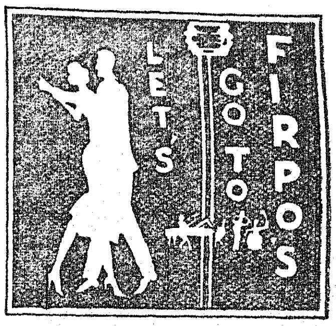
Editorial Comments



THE ECONOMIC ENQUIRY

It is a matter for regret that it has not been thought fit to accord more publicity to the doings and deliberations of Dr. Bowley and Mr. Robertson. The two experts have visited and left Calcutta without the public being enlightened in the least about the ideas and suggestions submitted to them by those whom they met in this city or the light in which they regarded such ideas. So that the economic enquiry continues to remain, so far as the wider public is concerned, but a mere aspiration, without any clarity either as to the objectives or the methods to be pursued. And it is the experience of this country in all such matters that the lack of lively public interest, which constant public discussion alone can generate, ends in most undesirable developments. It is in this view that we attempt to examine the general issues and consideraions involved in the work in which Dr. Bowley and Mr. Robertson are now engaged; and we hope that the publication of this article is in time to receive full consideration at the hands of the experts in a formative stage of their enquiry.

* * *

In all these matters, it has for long been the fashion to speak of the peculiarity of Indian conditions and the necessity for foreigners, who are in charge of the work, not only to acquaint themselves with such peculiarities but to appraise their full significance before making the final recommendations. We believe that in none of the enquiries so far conducted by foreigners was this so important as in the matter of the economic enquiry and the collection and organisation of economic statistics. We shall endeavour to elucidate the points we have in mind by pursuing the line of cleavage between conditions abroad and conditions in India.

* * *

Statistics are obviously valuable as records of the past, as indices of current trends and as guides to future action. Though this is generally realised, it is not always that emphasis is laid on the aspect which is most important in a given position. A country which has reason to regard itself economically well-developed may be content with accurate records of the immediate past to reassure itself that nothing untoward is happening and that the national economy continues to be sound. In a period of intense flux indices of current trends acquire a unique value. They may be reassuring on one side or disquieting on the other. Some figures may be found to be pregnant with crisis and catastrophe. The national economy of Great Britain in the post-War period and during the present depression is an apt instance, furnishing numerous illustrations of the point we are seeking to bring out. But in an undeveloped country like India, emphasis has to be laid on the directive and creative, rather than the historical, value of statistics. To statisticians hailing from England we consider it a salutary warning that they should not be content with organising the collection of statistics relating to current "business" activity.

* * *

They have to view their task as one of organising knowledge of economic conditions in the manner best calculated to help the realisation of the immense economic potentialities of this country. If it is granted that the actualities are but a fraction of the full potentialities, it will follow that statistical records of current activity necessarily refer to a very small part of the life that is possible for India. And there is no warrant for assuming that a mere expansion of the channels of present business activity will ultimately cover the whole of India's economic potentialities, though such expansion of present channels is as necessary as mapping out others which are not yet in existence. Economic statistics, therefore, cannot be adequately organised, until it is recognised that outside the spheres, which take a prominent place in the minds of foreign economists, there are others which are far more important from the standpoint of economic policy in the future. It would be well to start with urging that Dr. Bowley and Mr. Robertson are engaged in organising economic statistics for a country whose rural and agricultural character cannot be altered by the fact that there is, unquestionably, vast scope for the development of big industries on lines familiar to Westerners.

* * *

If we approach the whole economic problem in India from the standpoint of the daily needs of the average villager, it would be recognised that there is room, even within the confines of each village economy, for the development of manifold new activity, the organisation of new services and the production of new goods which would add immeasurably to the well-being of the people. Here no intricate questions of foreign exchange or international trade enter; and if world changes are sometimes felt in these obscure corners, they are felt only as a kind of backwash. We attach not a little importance to this expansion in the creation and exchange of new goods and services in rural areas.

* * *

And for this purpose, the economic enquiry will have to enter minutely into the possibilities of each rural area in the country. This necessarily involves a very considerable devolution of functions on local authorities or agencies with proper safeguards for ensuring correctitude and reliable collation of statistics in the provincial and All-India centres. But this is a purely administrative problem, with which we shall not concern ourselves, except to observe that the large mass of students and educated unemployed will come in handy for this work. And we might even say that to employ educated youths in economic enquiry in the villages is the best way of turning the thoughts of youth to the village and to rural reconstruction.

* * *

The first aim of economic policy in India should be, we affirm, to broaden the amenities of rural life. And for this, it would be necessary to gather accurate knowledge about (1) the state of agriculture of all kinds and shades (2) the financial condition of each class of villagers which includes what for want of a better term may be called the rural credit system (3) the state of the artisan and petty traders apart from such connections as these classes may have with agriculture, (4) the equipment, production and marketing system of cottage industries, (5) cattle wealth and dairy produce with the connected question of pasturage and fodder, and last but not least, (6) unemployment according to classes. If all this may be called the material aspect of rural economy, there is also the cultural aspect, which would refer to the requirements of a rural area in the matter of juvenile and adult education, sanitation, public health, etc., and the resources of the village in men and money. It should be the aim of the directors of the economic enquiry to provide for each village the data which will enable prominent and influential members of the locality to plan and carry out, through co-operative effort, a very considerable improvement in their economic and cultural life. If the idealism of villagers is roused and if they are fully acquainted with the conditions in which their economic life is lived, we are confident that each village would of itself contribute largely to the solution of even such a problem as usury in rural areas, which has baffled generations of experts in Co-operation.

* * *

We hope we shall not be confronted with facile pleas of practical difficulties. We do not believe that this work can be done in a day or two or by one set of men or two. All that we believe is that this task, when tackled in the proper spirit and with a due recognition of its importance, will be performed within a measurable time. And all that we ask is that the directors of the Economic Enquiry will explore the possibility of a rural economic enquiry by putting the village *panchayats* on the task, with the supervision of local officers and the assistance, if necessary, of unemployed, but educated and well-to-do youths in each village. We hope it will not be considered a confession of the impracticability of these suggestions, if we add that any effort in this direction, even if otherwise abortive, will certainly have the effect of galvanising our dormant rural life into a new activity and prepare the ground for those measures of nation-wide reform and reconstruction, without which we can make no progress worth the name in any sphere of life.

* * *

When we turn to other statistics, we begin to tread tracks that to the foreign economists must be already well-trodden. Even in India we have in practically every sphere the beginnings of a statistical organisation which require reform, reconstruction and, we must add, revitalisation. It is manifestly impossible to consider within the space of a leading article all that remains to be done in this sphere in India. We have dealt at some length with rural statistics, as we apprehended the danger of its importance being overlooked by foreign economists. We contemplate the publication of a complete memorandum on the question of economic statistics; and here we shall be content to dwell on the more crying evils of the present system and to outline in brief the difficulties which we ourselves have experienced in our endeavours to provide information for the public.

* * *

There is, perhaps, no more serious condemnation of an information bureau or a department, which includes among its purposes that of providing accurate information to the public, than that it is unresponsive to a request for co-operation from those engaged in economic studies. It may be incredible to many, but it is nonetheless true that, when we approached a government department for facility of reference to certain volumes of Indian seaborne trade, we had a provoking presentation of the copy of the rules of the Commercial Library. Our Year Book, for the compilation of which, this facility was sought, has been widely acclaimed as a success, in the face of this official recalcitrance. We need hardly say that we do not recall this incident in the spirit of a personal grievance or mortification; nor do we withhold the fact that many other departments of government vied with one another to tender help to us in the discharge of this public service. But it is essential, if statistical organisations are to function in any useful manner at all, their *personnel* should recognise the importance of unofficial agencies and individuals engaged in similar work. It is only when the importance is fully recognised that a closer co-operation is brought about among those with similarity of aims, and the work can progress.

* * *

Most departments of government, which collect statistics in the course of their routine work, have little thought of the value of such statistics to the public and regard it as of a purely departmental value. How else could we explain the anti-diluvian nature of the figures of public revenue and expenditure that are published in this country? So blind are the officials to the value of those figures to students of public finance, that a high official once pleaded the great distances of this country as an answer to the demand for up-to-date figures. Without any effort of imagination, the official in question has, apparently, lived stolidly in a pre-telegraph and pre-telephone world! We have thus to contend against the more intangible obstacles before we come up against the concrete, practical difficulties of collecting economic statistics.

* * *

Statistics may for the purposes of the present discussion be conveniently divided into monetary and economic statistics. Most people may have been resting in the faith that monetary statistics in India are more satisfactory than statistics relating to prices and production. But if the prime purpose of monetary statistics is to afford reliable guidance to the money market, it will not need much thought to realise that the statistics now available are woefully inadequate. There are no figures to indicate the real state of trade demand, the figure that is passed off as such along with the weekly statement of the Imperial Bank having, if at all, reference to only a few limited centres and certain particular classes of business. But it is obvious that, so long as the money market in India is not an organic unit and the hiatus between the world of indigenous bankers and the joint stock banks, including the Imperial and the exchange banks, continues, monetary statistics are bound to be inadequate and unreliable. It is under the auspices of the Reserve Bank that monetary statistics are to be collected, compiled and published; and it is for the Reserve Bank also to make the money market more organic in the sense of a unit with more closely interrelated parts.

* * *

Another serious inroad into the adequacy of monetary statistics arises from the unknown factor of hoarded rupees which might come out of circulation any time and upset our calculations. It is for the experts engaged in the task to see if there is any means of estimating these hoards and finding the clues to the behaviour of such hoards in the past and in the future.

* * *

While these are the major problems which require to be tackled and solved, there are details of the actual work, and particularly the stipulation of the form in which banks and financial institutions are to submit their returns to the Reserve Bank. The information, which, according to the present Bill, the Reserve Bank is to receive from member banks, is neither adequate nor comprehensive and cannot be of real use to the statistician.

* * *

It remains for us to touch on the maintenance of price indices and production statistics. It is in these respects that we have felt the shortcomings of tht present position to be most irritating. The recent controversies on the ratio questions have shown how inadequate are the present index figures of prices for determining the internal purchasing power of the rupee. When, even according to standards that ruled some years ago, the price indices in India are found to be inadequate, it need hardly be mentioned that they do not satisfy the finer criteria set for them by the later refinements in the idea of the purchasing power of money. Now that India is presumably on the eve of a careful organisation of her economic statistics, it is necessary that provisions should be made for the careful compilation of the various price indices and also for the construction of a composite index number which will enable students to gauge what may be called the general purchasing power of money. But it is obvious that such composite index numbers can be formed only when the constituent price indices have been organised and maintained on a proper basis. Whether the manner in which the present wholesale price index is arrived at is satisfactory or not, it is for the experts to examine thoroughly and make their decisions on. Our own feeling is that more care is called for in ascertaining the prices of various commodities so as to make the index numbers sensitive to changes in the commodity markets and that the components should be wider larger and more variegated in order to bring them in line with the Index Figures of advanced countries.

* * *

As for the cost of living, the problem in India bristles with its own difficulties. There is, indeed, objectively, no such thing as a cost of living which is applicable to the whole of India. Conditions in this vast continent are so different that it is futile to attempt to compile a cost of living index that can be considered equally useful in all parts of the country. We feel that it would be well if a distinction were made between cost of living in rural and in urban areas and in respect of the latter as between one province and another. It should not be beyond the power of the statistical authorities to be established in the future to calculate a cost of living index for each of the chief industrial areas in India and a rural cost of living for the rural parts of each of the major provinces. But we must confess that in this respect we venture no more than to make a tentative suggestion in the raw.

* * *

As for production, the lack of production statistics and a general index of industrial production in India has been keenly felt by us during these years, when we have attempted to compile a monthly Trade Supplement, surveying the course of trade, industry and finance during each month. A picture, which is hazy enough in the outline, is marred all the more by numerous spaces in which there is neither a delineation of general features nor a filling in of details. Speaking from the standpoint of our own daily work, we should welcome any effort to make available to the class, of which we may regard ourselves as representative, production figures and production indices which will have a more than purely antiquarian interest.

* * *

There is one point, however, which we should press in this context, though perhaps it is not the direct concern of Dr. Bowley and Mr. Robertson in their present enquiry. Attempts to improve economic statistics in India have been widely welcomed more out of a sentimental respect for such statistics, than because of the hope that they will be helpful to the advancement of our economic life. And it may, therefore, be considered somewhat unorthodox if, in this context, we seek to remind people that we hardly know of any productive activity being set afoot merely because of statistics being made available. In a country like India, where the economic potentialities lie yet untouched, it might be thought that economic statistics would be found to be more practical and useful. But we believe that the kind of accurate information which will enable India progressively to realise the economic potentialities, is not what the academic economists can ascertain and gather. We believe that hard on the heels of this economic enquiry there should be instituted a small committee of technicians who will attempt to gauge the possibilities of new productive activity on a large scale. We have in mind such effort as must necessarily have preceded the formation of the Five-Year-Plan in Russia. And it is only after a thorough examination by such technicians and after gauging the possibilities of consumptive demand that the future government will be able to institute a national economic policy that will raise the well-being of the masses to heights that are yet undreamt of.

JUTE TRADER'S DILEMMA

Since our last week's leading article on the Production Programme of the Jute mills, Mr. H. H. Burn, Chairman of the Indian Jute Mills Association, has dealt with the same subject in his address at the Annual meeting. We have also received a full report of the speech of Mr. Ernest Cox, the Chairman of Jute Industries, Ld., in London in Air Mail week. The importance of the subject and the two utterances referred to above call for a return to the same theme. Those who have read our comments on this subject have not, we trust, failed to note the similarity of Mr. Burn's and our approach to the problem of relaxing or abolishing the present restriction of production in Indian jute mills. Mr. Burn's speech is characterised by awareness of all relevant facts and caution in their appraisement, qualities which one always associates with the leaders of a long established industry. And in the position, in which the jute industry finds itself to-day, we have the utmost need for such qualities. The position is too full of contraries. Firstly, while jute is an old-established and prosperous industry, the troubles of recent times and the challenges to its power and position are by no means to be despised. Secondly, though jute is a monopoly of India, a position has been reached in which the Indian jute industry has to reckon with the doings and activities of its competitors abroad. These competitors have very nearly been reinforced by Japan who has proved herself to be the doughtiest fighter in the field of export markets. Thirdly, while the jute industry here is obliged to work under a system of restriction, there has been an expansion in the production of jute goods in foreign countries. And fourthly, we are passing through a period of depression, the length and duration of which are still uncertain, though it might not be unreasonable to presume that the worst phase has been already left behind.

* * *

In a position so complicated, it is, indeed, difficult to come to a decision on the outstanding question of effecting a change in the present programme of restriction. It is obviously a necessary preliminary to sound judgment to acquaint ourselves fully with the present position. Mr. Burn, after prefacing the central topic with a few observations, by no means noncontroversial, on the place of speculation and the futures market in the jute trade, proceeded to give the relevant facts. The state of India's trade in jute with the principal customers naturally comes first. North America which is by far the largest buyer of hessian has taken more than 70 crores of hessian during 1933. But here, the effect of the processing tax on the North American demand for hessian is an unknown quantity, which is singularly unhelpful to a decision on the question of the restriction in 1934. In the Argentine the activities of the Exchange Control Board have resulted in a restriction of the offtake; and it may be presumed that stocks are lower. The drought which threatened to be severe came to an early end and crops are reported to have recovered. But the Exchange is still a factor to reckon with. In Australia there are reports of overbuying and it is more than doubtful if the demand from that country can be set down as a bull point. Cuba has no cheerful outlook.

Turning to the activities of competitive producers, the position is more intriguing and more obscure. Mr. Burn pointed out that according to *Dundee Prices Current* of the 3rd January, "the year 1933 provided a wonderful improvement for all concerned in the jute industry of Dundee. There was a restarting of standing works and production practically touched the new normal of capacity". The *Dundee Prices Current* also refers to the place of Britain's recent trade agreements in the expansion of the jute trade. It points out that the exports of the jute cloth from the United Kingdom to all countries for the 11 months ended November amounted in round figures to 97½ million sq. yds. as compared with the corresponding period of 1932, when the exports reached a total of 72½ million sy. yds. This represents an increase of 33½ per cent. This is reflected in the increase in the consumption of raw jute in Dundee. For the 12 months ended 30th June, 1931, Dundee consumed 650,000 bales; in 1932 there were 710,000 bales accounted for; and in 1933 about 730,000 bales. Besides, during the quarter 1st July to 30th September, 1933, the consumption in Dundee was well over the equivalent of 850,000 bales per annum. The consumption for the 3 months was 50,000 bales more than for the same period of 1932."

* * *

As regards the position of the Continental mills Mr. Burn pointed out:

> "The export figures for the period July-September, 1933, amounted to 2 crores 45 lakhs of yards and those for the period April-June, 1933, were 74 lakhs of yards. The figures for the preceding 6 months were:—
>
> October/December, 1932 ... 89 lacs of yards.
> January/March, 1933 ... 51½ lacs of yards.
>
> I am also informed that the import of Hessian Cloth from the Continent to Buenos Ayres for the period October, 1932, to September, 1933, was 3 crores yards as compared with a figure for the same period of 1931-1932 of 2 crores, an increase of 50 per cent."

* * *

It must not be forgotten, however, that no new jute mills have gone up in Europe during the last 4½ years with the exception of a mill near Marseills; according to a German correspondent in Zurich quoted by Mr. Burn in his speech. He has also stated that production during 1933 in the Continental mills in general was not better than between 33 and 50 per cent. capacity. Some countries which were near 50 per cent. during summer have fallen back to 33 per cent. It is relevant to recall here the unemployment figures of the jute industry in Dundee which show that at the end of September, 1928, there were 10.28 per cent. of the people out of work. From then on to September, 1931 unemployment increased rapidly the sequence of figures at the end of September in each year being 13 per cent., 48.4 and 48.7 per cent. In September, 1932 a slight drop occurred to 41.3 per cent. and with seasonal variations unemployment increased until at the end of 1933 unemployment rate had dropped to 26.4 per cent.

* * *

It is thus clear that the foreign competitors of the Indian jute mills have increased their output and their share of the total trade. And it is natural that enthusiasts both in and out of the jute industry in India should feel that the policy of restriction has been overdone and that it is time that a change is made on a policy, of which our foreign competitors seem to be the beneficiaries more than ourselves. But it is obvious that the question of the continuance of the present restriction should be judged more from the standpoint of the effect of any step on the position of the trade in the future than by mere intolerance of the progress of competitors. So far as the past is concerned, it is certain that the stock position of the jute mill industry would not have improved so well as it has done, but for the scheme of restriction. While it is obviously unwise to continue the imposition of this self-denying ordinance, while foreign countries are finding it profitable to increase their equipment and output and new rivals threaten to invade the market, it should not be forgotten that the abandonment of the restriction will cause a demoralisation of the markets which would involve all the producing units in a common ruination."

THE NEW DOLLAR

At last President Roosevelt has issued the long-awaited proclamation fixing the dollar value in exercise of the powers conferred on him by the Monetary Bill recently passed by Congress. As under the the Bill the upper limit of revaluation of the dollar was fixed at 60 per cent., President Roosevelt has now announced that the dollar will have 59.06 per cent. of its former gold value and that the price of gold will be 35 dollars an ounce as from February 1st. The new gold dollar will contain 15 5/21 grains of gold 9/10ths fine and the new gold price applies to all gold delivered in the United States mints or at the New York and Seattle assay offices. Those, who have followed the course of President Roosevelt's monetary policy, will not need to be told that the proclamation also automatically creates the stabilisation fund of 2,000 million dollars from the gold profit. It may also be pointed out here that the total gold supply of the United States, to which the Government have now full and sole title under the Monetary Bill, amounts on the old dollor basis to 4,029,092,988 dollars and that on the basis of the present revaluation it would amount to 6,800 million dollars, the difference representing the profits to which the Treasury is entitled and out of which is created the Stabilisation Fund referred to already.

* * *

The developments indicated above are but common knowledge and to the extent that they have been anticipated for a long time and the drop in the value of the dollar from its old parity has been stretched over a period, there cannot be anything

like the sensational changes in commodity prices which seem to have exercised the minds of some of the professional speculators in the city. The changes announced by the President are important for the threats and promises that they hold out to international currencies and exchanges in the future. They are also important as inviting an examination from the standpoint of the internal currency and credit policy which the United States Government will follow in the coming months. To a world accustomed to be puzzled frequently by the actions of President Roosevelt since the abandonment of the gold standard on April 19, 1933, it might seem an almost hopeless task to appraise the significance of these changes as a clue to the future of American monetary policy or of the international currencies and exchanges in the future If we might proceed from comparatively indisputable facts and official statements Mr. Henry Morgenthau has stated in an interview that "the United States is on the 1934 model gold buillion standard." While the use of the vocabulary of progressive American industry may seem trite, there is, perhaps, in this a threat of annual changes in the monetary system, which does not by any means sound pleasant in one's ears. But if one might attach importance to the employment of the term "gold bullion standard", one is encouraged to anticipate the possibility of America allowing free movement of gold at least for legitimate commercial purposes. In an earlier statement Mr. Morgenthau has also pointed out that the Treasury would sell gold for export besides buying and added that until further notice the Treasury would sell gold for export to foreign central banks whenever the exchange rates with the gold standard countries reach the gold export point the sale price being 35 dollars an ounce plus 1/4 per cent. an ounce for handling charges. The Treasury officials are also reported to have expressed the opinion that the stabilisation fund will not have to be used extensively because the fixing of the gold price should peg the exchange rates. They also expect, according to current reports, an immediate readjustment of the world gold price resulting in the depreciation of the dollar and the raising of the American price level.

If the statements herein reported to have been made are stuck to by the American authorities, it may be said that the riddles set by Mr. Roosevelt a fortnight ago in regard to the establishment of a free gold market have, by now, been more or less fully solved. Equally may it be said that the rise in the London price of gold to the record level of 135s. 6d., involving as it does a rise in the premium for the sterling franc rate, to 1s. 3½d. set at rest the speculation about a possible arbitrage movement of gold to America with a viw to take advantage of the differences in the prices. London has thus counteracted arbitrageurs effectively ; but the spurt in the London price of gold involves the danger that gold might be withdrawn in large quanttities from the Bank of France with a view to take advantage of the higher price in London. The decrease in the gold reserves of the Bank of France visible in the statement of January 26th, amounting to 105 million francs as compared with the previous week and the consequent fall in the net cover of 79.36 per cent. 78.79 per ccent. form, perhaps, the shadow of the coming event of a more pronounced and more embarrassing efflux of gold from France. It is certain that the gold standard countries are under no delusion about the dangers which the policy of Mr. Roosevelt portends for themselves. And it is interesting to watch the moves that France might take with a view to protect her currency and her interests.

* * *

While speculation about France's policy is too speculative to be of practical value, it is certain that interest for the time being centres round the relations betwen Great Britain and America. A London cable dated February 1st points out that "Mr. Roosevelt's action is regarded in some quarters as a big stick to Britain to force the latter's acquiescence in dollar sterling stabilisation at a rate that is considered in Britain to be overvaluation of sterling." There can be no doubt that by fixing the value of the dollar at 59.06 cents and by establishing what Mr. Morgenthau has called the "1934 model gold bullion standard," Mr. Roosevelt has tried to force the hands of Britain in the matter of her exchange policy. During all these months of chaos in international currencies the

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the Monetary and Economic Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries ; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. The discussion of price movements has, where figures were available, been brought up to May, 1933.

British monetary authoritities have managed to pursue a policy in which all the possible alternatives will be equally open to her. Our Overseas columns refer in detail to such alternative courses of action which it is possible for Britain to take in her present predicament and over which according to some reports there has been during Air Mail week a full-dressed Cabinet meeting.

* * *

It is obvious that the major consideration in British financial policy must be the interests of the British export trade. And considered from this standpoint, what matters to Great Britain is whether Mr. Roosevelt will take immediate steps to raise American prices to the level justified by a 60 cents dollar or whether he would be content to depress the exchange rates to that level allowing an unconscionable time lag between the revaluation of the dollar and the raising of internal prices. For in the event of such a time lag being permitted, American industry will have a dangerous advantage in foreign markets over their British rivals and Britain would be forced to bring about a similar depreciation in the gold value of sterling. It seems to us improbable that America and Great Britain will mutually agree to a 40 per cent. depreciation in the gold value of both dollar and and sterling; for according to all reports, Mr. Roosevelt is out to procure what in England is regarded as overvaluation of sterling in relation to the dollar. It is to be hoped that for the present, the two countries will agree to a rate of 5 dollars with guarantees from President Roosevelt that a rise in the American price level commensurate with the new gold value of the dollar will be achieved within a stipulated time.

* * *

When the relations between Great Britain and America are obscure and the course which French financial policy would take defies even the most hazardous guess, it is futile to endeavour to appraise Mr. Roosevelt's proclamation in what may be called its international aspect. But a note of optimism, albeit futile and forlorn, is detectable in the following observations of the *Economist* which we reproduce below for our readers to ponder over:

> "Several passages of the message contain references to the desirability of a World-wide agreement creating a uniform monetary policy," and the new fund has been interpreted in some quarters as establishing an equality of bargaining power between the United States and Great Britain; in the words of the Secretary of the Treasury: "If we are going to play the game we ought to have as may blue chips as they." The form of the proposed agreement has never been revealed, but it is to be presumed that the President has in mind an undertaking by each country to confine the fluctuations of its currency within certain percentages of its previous gold parity, the exchange rates being controlled by free purchases and sales of gold at prices fixed from day to day by the authorities of each nation in accordance with the movements of commodity prices.
>
> "It would be a mistake to reject such suggestions, if they are made, entirely out of hand. There are abundant practical difficulties in the way of any such system, but it has long been recognised in Great Britain that the first step in the restoration of the gold standard must be by the adoption of provisional, and consequently variable, parities. Whether such an agreement is to be called a permanent system of "commodity currencies" or a temporary half-way house to the gold standard need not cause great trouble. If the President makes overtures of this nature, it is to be hoped that they will receive sympathetic consideration in London."

* * *

In so far as the revaluation of the dollar lends itself to being represented as a tentative return of America to the gold standard it marks an advance on the unspeakably obscure position which has ruled in international currencies since April last.

ENGINEER-PHILOSOPHER

At the 14th Annual General Meeting of the Institution of Engineers (India), Sir Guthrie Russel, the President for the year, delivered an address which is marked by a happy blend of aptness of thought and cadence of expression. As is to be expected, Sir Guthrie dwells on the very usefulness of a period of enforced inactivity. After a hectic spell of progress, the railways had to contract and cut short all plans of expansion. The eight-year period of development had brought into existence a machinery that was most competent to deal with capital expenditure on a vast scale. Capital expenditure on any scale was no longer possible—this was the situation that confronted the railways four years ago. What was to be done with the machinery that had been created for dealing with colossal works? At first sight, it might look as though all the experience gained and all the paraphernalia got ready were running to waste because of the sudden disappearance of suitable opportunities. Sir Guthrie, however, does not hold such views. The

depression has not been without its uses. It has afforded the breaking space during which a consolidation of the games achieved in the earlier period could be properly planned and carried out. Sir Guthrie is the kind of engineer-philosopher who would welcome the lean years as providing the occasion for the efficacy of his works to be fully tested and would be thankful for circumstances that permit him to strengthen the ground won and to seek out any weak spots in the organisation of his forces which less trying times have left undetected.

* * *

The period during which Sir Guthrie has been the Chief Commissioner of Railways has seen such a sharp and sudden reverse in the fortunes of the railways that, but for good and strong leadership from the headquarters, the whole organisation might have been subjected to an almost intolerable strain. It is, therefore, comforting to learn from the head of the railway administration that a careful analysis of the relevant figures leads to the conclusion that the railways of India have stood the test. The railways may not yet be out of the wood; but, Sir Guthrie assures us, there are distinct indications of daylight ahead. The period during which there was this inevitable slackening of speed was spent in an intensive search for further means to economy. It is claimed that substantial savings in almost every department of operation have resulted from such new features as the fullest standardisation of equipment, economies in the use of fuel and in expenditure on consumable stores, more intensive use of locomotives, and the abandonment of obsolete or uneconomic types of stock.

* * *

So much for the past. What of the future that confronts the engineer in India? There can be no doubt that "the engineer in India is in many respects in a fortunate position compared with his *confreres* in more highly developed countries; for although much has been done to alleviate the immediate and more urgent necessities which unfavourable climatic conditions and a low standard of living impose, yet the scope for his further activities is almost limitless," in availing himself of the limitless opportunities that lie in store in the future, the engineer may be content—may, in fact, feel bucked up—with the thought that if the work of his hands is good, its influence will still be left, not only when the present winter of discontent gives place to brighter times, but in the distant future when these temporary vicissitudes will have been forgotten.

REMISSION IN LAND REVENUE

The Madras Legislative Council, which is now in session, has been discussing a motion sponsored by Mr. Arasu demanding 25 per cent. remission in land revenue. Mr. W. K. M. Langley of the European Group expressed sympathy while he was unable to support the resolution as it stood. Mr. Langley said that he read with interest the proposals of the Government for alleviating the situation but he had no hesitation in saying that the particular measures proposed by them were almost entirely valueless. For his part he could not help feeling that some measure of relief was called for; and while he criticised everyone, he himself had no definite solution to offer except for the suggestion that in the place of paddy, sugarcane should be grown. But even sugarcane is not a paying crop except in very few localities in the Presidency. Expansion in sugarcane cultivation can follow, but should not precede, the establishment of a number of sugar factories in all such areas as are suitable for sugarcane growing.

The resolution of Mr. Arasu elicited a lively debate. There were many amendments, and the general consensus of opinion was that the Madras Government was not dealing properly, efficiently or sympathetically with the situation that faced them. The Revenue Member advanced the amazing plea that even the little remission that the Government had proposed was more than what the situation actually required. He could hardly find anyone to support him in the position he thus took. In conclusion the resolution was carried together with a good many amendments, 59 voting for the resolution as amended, 21 against, and 4 remaining neutral. Amongst the " neutrals " was Sir A. P. Patro. who is casting, we understand, a fond and lingering look at the Law Membership vacancy which will shortly arise on account of the retirement of Sir M. Krishnan Nair. The resolution as amended and as finally passed runs as follows:

> "This Council recommends to the Government that a remission of 25 per cent. in the existing rate of assessment inclusive of water cess and other cesses, on all ryotwari lands irrespective of wet or dry in the presidency be granted during the fasli 1343."

I should, I suppose, take a considerable part of the credit or blame for the furious speculation that is now rife in regard to the *personnel* of the Reserve Bank. The latest gossip in this connection is the story circulated by a news agency that Sir George Schuster is to be the first Governor and Sir Shanmukham Chetty and Mr. J. B. Taylor are to be the first Deputy Governors. This forecast agrees with my discussion on this matter in two out of three items. The difference is accounted for by the simple fact that while I was offering suggestions, the news agency in question was indulging in a prophecy. It is, of course, not the first occasion when the name of Sir George is linked with the appointment of the Governor. In the course of the third reading of the Reserve Bank Bill in the Assembly, Mr. R. S. Sarma was the first to advance the proposal that the Finance Member should be the Governor and the President of the Assembly should be the Deputy Governor. Mr. Sarma's strong point is a good commonsense understanding of the psychology of any situation; and he should have argued to himself that someone or other of the Assembly members was bound to wind up his oration with the two-fold compliment: one directed to the President and the other to the Finance Member. If someone else was to get the credit for a compliment of this nature, why should not Mr. Sarma be the first in the field? This may, possibly, account for the rain of bouquets of which the first shower was associated with Mr. Sarma.

* * *

It is far from my purpose to suggest that Sir George would not make a first-rate Governor of India's central banking institution. But his appointment would certainly be construed as an arrangement devised to reinforce the control of the Secretary of State on the Reserve Bank. In his dealings with the India Office over the various modifications proposed in the Reserve Bank Bill, Sir George had to bow to the sharp and curt instructions of Sir Samuel Hoare. The public are not in a position to know what exactly happens between the India Office and the Government of India in regard to consultations of this character. But there is certainly an impression in the public mind that far from Sir George having been able to bring down Sir Samuel on any point, it was he who had to carry out the edicts issued from London. Will Sir George be the kind of Governor who will be able to symbolise that independence from political and other influences which, we are told, is to form the dominant note in the working of the Reserve Bank. As I have already stated, the appointment of anyone directly from the Bank of England or from among those who have been intimately connected with the Finance Department of the Government of India would have the effect of strengthening the suspicion in the country that the real purpose of the Government in establishing the Reserve Bank is to take out currency matters from the purview of the Assembly and to hand them over to a body which will be in charge of one amenable to London City interests and the India Office.

* * *

From this point of view, there is one and only name that is acceptable. Sir Osborne Smith was brought out to India, in 1926, as the Managing-Governor-Designate of the Reserve Bank of India. He has banking experience, which Sir George Schuster or any of the other persons whose names have been mentioned in this connection have not got. Sir Osborne is an economist with a good understanding and with up-to-date knowledge. He had had direct and personal contact with the London money market and the New York money market. More than anything else, the Indian public know that since he became the Managing Governor of the Imperial Bank of India, he has demonstrated that it is not always that the Government can make the Imperial Bank a tool in their hands. If, therefore, Sir Osborne is not selected, there will be further corroboration for the suspicion that the qualification demanded of the Governor is not independence but pliability to the dictates of those who now hold the reigns of power and who seek to continue to hold the position.

* * *

Holding this view as strong as I do, I cannot but feel that the retirement of Sir Kenneth MacDonald is calculated to cause complications in future arrangements. Sir Kenneth ought to have been persuaded to stay for another two years—the more so as, despite his thirty and odd years of service in India, he is in the best of health, keen and hard-working as ever. In the division of labour between the two managing governors, Sir Osborne was, in broad terms, concerned with policies and with transactions which involve contact with the Government of India on the one hand or the market on the other; and Sir Kenneth was in charge of the *portfolio* of the entire administration of the Bank with its three Head Offices and its two hundred branches. The great experience which Sir Kenneth has had and his painstaking habits are responsible for marking him out as the ideal man for a responsibility which means the control of so large and so widespread an organisation. Sir Kenneth did his work so efficiently and so sympathetically that the entire staff of the Bank, high and low, could always feel sure that whatever their grievances, they could always get a hearing when an appeal was made to the highest quarters. A more sympathetic and tactful administrator the Imperial Bank could hardly secure. The loss of such an official is not

easy to make up—especially as in the event of Sir Osborne being ultimately appointed the Governor of the Reserve Bank, the Imperial Bank will be left without a senior official to perform the duties of a Managing Governor. Sir Kenneth left on Thursday evening; and while I do not grudge him the rest which he has richly earned, I do feel that some means should have been found for his continuing in service for another two years.

* * *

So far as the Imperial Bank itself is concerned, it is fortunate in having Mr. W. Lammond as the Deputy Governor. On the retirement of Sir Kenneth, it has been decided that there should no longer be two Managing Governors but one Managing Governor and one Deputy Managing Governor. Mr. Lammond is, therefore, the first Deputy Governor. It was nearly four years ago that he and I travelled together from Poona to Delhi after my evidence before the Central Banking Enquiry Committee; and, in the course of the journey, I mentioned to him that he was destined to be the first Deputy Governor. Apart from every other pleasure in this appointment going to the most suitable official of the Imperial Bank, I have the added satisfaction of a prophet who finds that his forecast has come true.

* * *

Now that Mr. Lammond will be mainly concerned with administrative matters, I would like to draw his attention to a feature of the Bank's Indianisation scheme about which the public have been seriously concerned. I have been one of the first to advertise, and to give full marks to, the fact that for nearly four years, recruitment of non-Indians for the Bank's staff has been suspended. I, therefore, believe that the higher authorities are in real earnest to accelerate the progress of Indianisation. But I have heard it said that matters are so arranged that no European Officer need work under an Indian Officer. For instance, if you go to the Calcutta Office of the Imperial Bank, you will find quite a bunch of Indian staff offices as passing officers. There is certainly a grievance amongst the Indian staff officers that they are not receiving proper treatment; and that the "bosses" have always a soft corner for the European staff officers. The revision of the leave rules for Indian staff officers was effected three years ago in a manner that seriously curtailed the rights and privileges that they had enjoyed till then. Cases are not unknown where owing to the whims of a Secretary, endeavours weie made to penalise Indian staff officers or blacken their record.

* * *

Mr. Vidyasagar Pandya, who, I will admit, has a particular bias against the Imperial Bank, is, however, on safe ground when he chafed the Imperial Bank authorities on the peculiar brand of Indianisation which they had adopted. In the speech which he delivered in the Assembly in the course of the debate on the Imperial Bank Bill, he said: "As soon as an Indian officer rises in the scale of his service and when the time comes for him to be put in charge of an important branch, then he is shifted to a smaller branch so that the European assistants may not have to serve under an Indian officer. . . There have been instances in which a branch which cannot afford to have an officer on a salary of, say, Rs. 1,000 or Rs. 1,200 is put in charge of an Indian officer while he, properly, ought to have been posted to an important branch. . . . As such the full opportunity of showing their full capacity and their work is not given to the Indian officers of the Imperial Bank." Mr. Pandya hurls his challenge at the Imperial Bank authorities:

> "I should like to know whether there is a single branch out of the 170 branches where there is a single Indian officer under whom a single European assistant is working while, in almost all the important branches, the Europeans are officers and the Indians only subordinates".

* * *

This allegation of Mr. Pandya is, from what I have myself known, true and correct. And I think that it is up to Mr. Lammond to take immediate steps to see that this impression is removed from the public mind. When, in Government services, we find European officers working under Indian Ministers and Indian members of the Executive Council, why should the Imperial Bank seek to preserve a kind of sanctity for their non-Indian staff?

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, Feb. 1, 1934.

Giltedged securities maintained a very steady tone during the period. Government 3½ per cent. loan, from its last close of 83-11 fell on both Friday and Saturday to 83-4 owing mainly to selling on the part of Calcutta operators; but firmed up thereafter and closed to-day at 84 after touching 84-3.

Altogether quiet trading was witnessed in shares. Outside interest or investment demand was negligible and only petty fluctuations occurred. Despite strongly bullish tone in cotton, mill shares showed practically no improvement. Most of the industrial scrips also moved within narrow price limits. Latterly, however, keen interest is being taken for Tata Powers on various rumours. Rates of important scrips are tabulated below:

London Agents:—THE WESTMINSTER BANK, LTD.

FIFTY-FIFTH REPORT.

To be submitted to the Shareholders at the Ordinary General Meeting to be held at the Registered Office of the Bank, Oriental Buildings, Bombay, on Thursday, the 15th February, 1934, at 3 o'clock p.m. (S. T.).

Directors' Report for the year ended 31st December, 1933.

The Directors beg to submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1933. The Auditors' Report is also annexed.

	Rs. A. P.
The transactions for the past year, including the balance brought forward from the previous year Rs. 3,40,864-3-1 have resulted in a profit of	16,93,014 6 11
An ad-interim dividend was paid for the half-year ended 30th June, 1933, at the rate of 10 per cent. per annum, which absorbed	5,00,000 0 0
Provision made for Income-Tax and Super-Tax for the year	1,25,000 0 0
Bonus to Staff	36,000 0 0

The Directors now propose:—

	Rs. A. P.
To pay a final dividend for the half-year ended 31st December, 1933, at the rate of 10 per cent. per annum, on the Paid-up Capital of 100 lacs, free of Income-Tax which will absorb	5,00,000 0 0
To place to Bank's Property account	1,00,000 0 0
To carry forward to the next account	4,32,014 6 11
Total	16,93,014 6 11

The actual Banking Profit is low owing to the poor demand for money due to continued trade depression.

The Average Official Bank Rate during the year was 3.563%, the lowest average rate since the establishment of thex Bank in 1906.

During the year under review a branch of the Bank was opened at Bara Bazar, Calcutta.

The Directors report with deep regret the death in March last of their valued colleague Sir Dinshaw Petit, second Baronet, who was a Director of the Bank for over six years; they desire to place on record their high appreciation of the valuable services rendered by him to the Bank.

In accordance with Article 92, Sir Cowasjee Jehangir, Baronet, and Sir Joseph Kay, Knight, retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

We have examined the above Balance Sheet with the books, cash and securities, at Head Office, and the certified returns from the branches, and have obtained all the information and explanations we have required. In our opinion, such Balance Sheet is drawn up in conformity with the law and exhibits a true and correct view of the state of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the books of the Bank.

THE GATEWAY OF INDIA

(From Our Correspondent)

Bombay, Jan. 31.

There is gratifying evidence that the Bombay Shareholders' Association has not only come to stay but has an increasing measure of useful work ahead of it. In the beginning, managing agents of joint stock concerns were disposed to look with suspicion on the activities of the Association and to display a lack of cordiality in their dealings with the Association. All that has now changed. The energy, knowledge, perseverance and earnest quest for information, which its committee (especially, its Secretary, Mr. J. J. Kapadia) have shown, have own for the Association the respect and gratitude of share-holders and have compelled managing agents to recognise the fruitful co-operation which has been made available. A perusal of the report of the work done during the third quarter of 1933 affords conclusive testimony to the new relationship that exists between the Association and the limited companies. The following paragraph regarding the negotiations between the Association and the Tata Oil Mills Company may be taken as a fair sample of the amount of work that can be done if there were a good and correct understanding between those in charge of the companies and those in charge of the Association:

> "A member of the Association having complained about the uninformative character of the accounts issued by the above Company, the Committee, after going through the accounts of the past several years, wrote to the Company requesting the Directors to show separately the various items constituting the stock in trade and to distinguish raw materials from finished products. The committee also commented on the uninformative character of the profit and loss account and stressed the importance of showing various items separately under convenient heads. A reply was received to the effect that the Directors would endeavour to meet the Committee's request consistently with the Company's interests.
>
> After the accounts for the year ended March 31, 1933, were issued, the Committee again wrote a letter in which they thanked the Directors for giving effect to some of their suggestions and pressed them to carry out those to which they had not acceded. In reply the Company has offered to discuss with the Committee the form of the Company's accounts in order that an agreed form may be evolved; in this connection the Committee have appointed a sub-committee for the purpose of carrying on discussion with the managing agents."

The biggest fight which the Association had was over its suggestions for the better protection of shareholders in the Imperial Bank. In its first encounter with the Bank authorities, much friction was generated and there was real unpleasantness. At one stage, it looked as though the spokesmen of the Association were over-doing their part. But due to the intervention of mutual friends, it was made possible for the Bank authorities and the representatives of the Association to meet in an atmosphere of goodwill and mutual understanding. The result was that the Bank saw the reasonableness of a good many of the suggestions put forward by the Association and took steps to effect its reforms in the directions indicated. There can be no more impressive evidence of the responsiveness of the Bank or of the tact and reasonableness of the Association than the compliment which the Chairman at the annual general meeting of the Bank held in Madras paid to the assistance and help rendred by the Association. The Association did not rest content with the work done in the earlier period. It took up the matter again in connection with the balance sheet for the year ended June 30, 1933 and drew the attention of the Bank to the possibility of avoiding wastage in stationery. This is what the quarterly report states in regard to this topic:

> "While taking note of the fact that economies to the extent of Rs. 19 lakhs had been effected in establishment and other charges, the Committee expressed the hope that further economies would be pursued and in this connection referred to the assurance given in the Chairman's speech to this effect. The Bank gave categorical answers to the points mentioned in the Association's letter. The Bank also informed the Committee that all items of expenditure including that of stationery received its constant attention."

The success which has attended the labours of the Bombay Shareholders' Association was seen in the best light in connection with the efforts which it put forward for the cleansing of the affairs of the Currimbhoy group. It was through the good offices of the Association that the Indian Bleaching, Dyeing and Printing Company was so rehabilitated that, in the new arrangement, complete protection has been ensured for the shareholders' interest. The management has been transferred to a reliable firm. The terms and conditions inserted in the agreement of the new managing agents show the constructive aspect of the Association's criticism. Mr. A. M. Kajiji, presiding at the third quarterly meeting of the Association, referred to the improved managing agency terms as follows:

> "The agency has been given for a fixed period of 21 years at the end of which shareholders would be at liberty to appoint new agents. Thus the hereditary tinge has been removed. The new agents have agreed not to mortgage their commission or to assign their office. They have also agreed not to claim any compensation in the event of winding up unless the assets on winding up are more than enough to pay the Company's debts and the paid-up capital. These stipulations constitute a distinct improvement on the present position and give the lie direct to the contention of the vested interests that in India it is impossible to get managing agents unless the agency is made hereditary."

In regard to the other concerns of the Currimbhoy group, similar success has not attended the efforts of the Association partly because of the general loss of confidence engendered by the crisis and partly because of the hopeless condition of most of the mills.

An achievement of an outstanding character can, however, be recorded. For the first time in the recent history of company affairs, the use of Section 142 of the Indian Companies Act has been invoked for the apointment of inspectors to investigate the affairs of the Indore Malwa mills. Three inspectors have been appointed by the shareholders; and it will be the business of these inspectors to investigate the books and affairs of this Company and to make out a case, if any, for the recovery of the huge loss inflicted on the Company by the managing agents and the negligence of directors and auditors".

What is the lesson of this crisis? The first lesson is, of course, that there is enough and more to do for an alert watchdog of joint stock concerns. There is not only ample justification for the Bombay Shareholders' Association but need for similar share protection leagues in other important centres like Calcutta and Cawnpore. The second lesson is that the managing agency system as it exists today has outlived its ultility and is not only obsolete but a positive hindrance to progress; and there can be no doubt that if this system is to survive, it should be purified and cleansed in a thorough-going manner. This crisis should serve to open the eyes both of the public and the Government in regard to the defective and obsolete character of the Indian Companies Act. For this colossal failure and this acute crisis, the Government cannot, as Mr. Kajiji urges, be free from blame. Again and again it has been dinned into their ears that Company Law should be modernised and made more stringent and more suitable to the conditions prevailing in India. The government have turned a deaf ear to the numberless appeals. The debacle of 1933 in the Bombay cotton mill industry must be a warning that any further delay in the amendment of Comany Law is fraught with disastrous consequences. Among the flagrant evils which should be dealt with in the revision of the Company Law the following deserve careful attention.

> "The multiplicity of managing agencies and of management interests; the absence of independent directors in sufficient members to safeguard the interests of the general body of shareholders; the interlocking of finance amongst companies under the same management; the agents' right to enter into contracts and dealings with their companies; the extensive borrowing powers wielded by the agents; the non-certification of stocks by auditors and the acceptance of agents' certificates regarding valuation of stocks without independent scrutiny; the failure of common directors in checking the practice of unhealthy relations between different companies; the employment of common solicitors and auditors for the agency firms and their companies; the mortgage of the agents' commission and the assignment of the agency office and rights."

The plea for a drastic revision of the Indian Companies Act of 1930 was urged, with great force from two other platforms in the current week. Mr. Manu Subedar, speaking as the Vice-President of the Indian Merchants Chamber for 1934, pointed out that while real progress in industry could be secured only on the basis of joint stock enterprise, every malpractice in the matter of company management added to the atmosphere of diffidence on the part of the investor. Mr. Subedar acknowledged the good work that was being done in this direction by the Bombay Shareholders' Association and emphasised that the time had come for the Indian Merchants' Chamber to strengthen the hands of the Shareholders' Association in the demand that the Government should take immediate steps for a thorough modification of Company Law.

The same matter was brought forward at the 23rd Annual General Meeting of the Bombay Shroff Association which was presided over by Mr. Kalyandas Bhaidas Shroff. In explicit and categorical terms, Mr. Shroff stated that "it is the incumbent duty of this Government to adopt the policy of protective tariffs for the development and consolidation of our nascent and promising industries." At the same time, Mr. Shroff took the opportunity to address a few straight and frank words to those who controlled the industries in the country. Protective measures should be understood as mere temporary expedients. They are only a stop-gap arrangement. They are to allow the necessary breathing time to industries for the consolidation of their position. But it is up to the industries to take all the necessary steps to utilise the "breathing time" for such consolidation. Progress is the keynote of the age; and if industries are to grow and flourish, they cannot afford to stagnate in the blind faith that protection will be continued for ever. There is urgent need for the removal of the defects of internal management and for the reform of industries on up-to-date methods. Towards the removal of such defects and towards the effecting of such reforms, the Companies Act should be modified in a way that will enable Indian industries to achieve progress that is broad-based on the security and satisfaction of investors.

Another topic, which engaged the attention of the speakers in the important annual meetings that were held here last week and this week, is the Lees-Mody Pact. Mr. Shroff condemned this pact in downright fashion. He does not examine in detail whether the arrangement which Mr. Mody had concluded in the teeth of opposition from a large section of Indian cotton mill interests was merely a gesture or whether it would lead to any direct and immediate effects of an adverse character. Mr. Shroff refers to the feeling that has been aroused in the country against this pact and gives this warning to Mr. Mody and his fellow conspirators:

> "When the national programme of Self-sufficiency of cloth and entire stoppage of its foreign imports is standing before the country, the conclusion of the recent Lees-Mody Pact on behalf and in the name of the entire mill industry has embittered the national feeling. If, despite its many defects, the people accord to the mill industry their support, even undergoing many sacrifices, it is but natural that the national feeling may get exasperated when this industry acts contrary to the national objective and aspirations. Nobody objects to an agreement if it is mutually beneficial. But the present generation is not going to tolerate an agreement which does not give any specific benefits and on the other hand harms the economic development of the country."

Mr. Mathuradas Vissanji, who has been elected President of the Indian Merchants' Chamber for 1934, refers to the unfortunate episode connected with the resolution passed by his committee disapproving the Lees-Mody Pact. He admits that there are two views on this matter; but so far as the Indian Merchants' Chamber was concerned, the resolution which the committee passed was a matter of duty with them. Mr. Mody and his friends should not consider that a sister association went out of its way to censure them. Rightly or wrongly the Indian Merchants' Chamber believe that the pact is not in the interest of the country; and as a public institution it could not shirk its duty to express its opinion in such matters. Mr. Vissanji is to be congratulated on the very tactful way in which he has dilated on a topic which has been the occasion of considerable bitterness, leading to resignations of certain important members.

We on this side do not suffer from the nausea to futures markets which seems to be a feature of your Clive Street bosses. The share market recognises forward dealings not only in shares but even in a typical government security like 3½ per cent Rupee Paper. The best futures markets for cotton and bullion are to be found in Bombay. The Shri Mahajan Association is one of the bodies which does large business in futures and the total number of members at the end of the year ended October 19, 1933, was no less than 632. In spite of such a large membership, only 13 members were declared as defaulters owing to their inability to meet their liabilities. Considering the large volume of business that is put through in the bazar, this should be considered satisfactory. The report of the Mahajan Association draws attention to the fact that of the 13 defaulters, six settled with their creditors and were readmitted as members. The new cards are in great demand and sell roundabout Rs. 2,500 each. The Association is making efforts to get itself recognised by the Government in the same way as the East Indian Cotton Association. Towards this end, Mr. Jamnadas Mehta, its legal adviser, and its Secretary have been in touch with the Financial Secretary of the Bombay Government. The outcome of these negotiations is not yet known. Meantime, the annual report gives important information about the deliveries actually put through during the settlements. In the July-August vaida of 1933, delivery orders for 3570 bales were issued and the settlement passed off amicably. The report shows that there are good indications that the volume of business is increasing day by day and that exporters and importers are having increasing recourse to the Mahajan bazar.

The total value of gold exported from Bombay to foreign countries during the week ended January 27, was Rs. 1,51,39,694, including sovereigns valued Rs. 3,98,585 and American dollars valued Rs. 1,767. It was carried by the P. and O. mail steamer s.s. *Naldera* which sailed from Bombay for London on Saturday afternoon.

Out of the total bar gold valued Rs. 1,47,39,342, metal worth Rs. 13,05,572 was for London, option Paris or Amsterdam; gold worth Rs. 8,68,304 was for London, option New York, Paris, or Amsterdam and the rest for London. Out of sovereigns, sovereigns valued Rs. 3,06,738 were for Paris *via* London, Rs. 40,722, for London option New York, Paris or Amsterdam and the rest for London. All American dollars were for London.

The total value of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 1,58,68,50,893.

"WATCHMAN"

EVERY 1934 WOLSELEY IS A "SPECIAL FEATURE" CAR

THE Wolseley range has become famous for its "special feature" cars. No matter what model you intend to buy, a Wolseley is always more interesting both to own and to drive. The special features you get in a Wolseley incorporate the very latest development in modern motoring. Synchromesh gears are, of course, on all models. Controlled Free-Wheeling is obtainable on the Hornet, giving a clutchless "change," while free-wheeling and automatic clutch in the case of the "16" and "21/60" afford you the easiest gearchange in the world. Further special features administer to your safety, comfort and economy. Many of them are only obtainable on a Wolseley model. Every Wolseley is, by reason of these features, a more delightful car to drive.

OLYMPUS

(From Our Correspondent)

New Delhi, Jan. 30.

The earthquake disaster has made an impression on the Olympians as nothing else in recent times. They are in dead earnest to play their role. The Viceroy wants to catch the imagination of the people. He must have his Fund larger than any other rival fund. The windfall of a lakh of rupees from Maharaja of Gondal is received here with the greatest relief and will, no doubt, be rewarded on a suitable occasion.

* * *

There are a lot of other Funds to which money is being sent by the public and the question is being considered whether any central machinery could be set up to co-ordinate all the activities. But I doubt very much whether any result will accrue from this consideration. Government and Congress cannot meet on the same platform, even to meet a common enemy—hunger and destitution.

* * *

Perhaps it is because of this that Mahatma Gandhi has not so far come into this movement, and prefers to continue his work for the uplift of the Harijan. That tragedy appears to him deeper and more devastating than even an earthquake.

* * *

Pandit Jawaharlal Nehru has thought otherwise. Just when he was preparing to defy the police and address a meeting at the Purshotamdas Park in Allahabad and the authorities were ready to arrest him, he was persuaded to change his plan and divert his energies to relief work in Bihar.

* * *

It is estimated that about a crore may be gathered from all over India through the various funds and that this may suffice to meet the immediate needs of the situation. Every province wishes to figure in the list. One Bombay magnate said that even those, who always had a bad word for Bombay, must have the fairness to admit that of all the cities of India, Bombay comes out first with contributions for over 3 lakhs.

* * *

Unfortunately publicity in respect of donations is not arranged on a uniform basis. Whereas even contribution of one rupee is mentioned in the Viceroy's Fund and gets All-India publicity, the Bombay donors of even ten thousand rupees do not get the same notice! That certainly requires to be remedied; and perhaps the best solution would be that the names of all, who contribute one thousand rupees and above, should be published in the Viceroy's List whether the contribution has come direct to the Viceroy's House or whether it has been remitted through a local fund raised as a tributary of the Viceroy's Fund.

* * *

The Assembly members have certainly done their bit. Rupees nine thousand is a respectable figure from the present Assembly, in which quite a good proportion of members depend on their daily allowance for their subsistence. And the members feel hurt because the cruel hand of a local cartoonist belittles their effort in this direction.

* * *

Local journalistic circles are intrigued about the appointment of Mr. Devidas Gandhi as Director of *The Hindustan Times*. There are a number of instances in India of Directors being also actively engaged in the Editorial section of their journalistic concerns. Mr. Arthur Moore of the *Statesman* is a Director and the Editor. Mr. A. H. Byrt of the *Times of India* is a Director and the Special Correspondent at Simla-Delhi. So, if Mr. Devidas Gandhi is later on made a Director and is also absorbed in the Editorial side of the *Hindustan Times*, there would be nothing unprecedented.

* * *

Our parliamentary session is progressing slowly. The members of the Assembly are in no mood to hurry. The Imperial Bank Bill, which Sir Lancelot Graham thought would take only a day or two, threatens to consume more time. Mr. Vidyasagar Pandya and Dr. Ziauddin Ahmed of the old Guard are back at their posts. Their attack and their persistence in their cause has not lessened a whit, for the defeat over the Reserve Bank Bill.

* * *

"This is a White Elephant, tied to the tail of the White Elephant of the Reserve Bank" was Mr. Pandya's justification for an hour's oration. The Bill, according to him, was not "consequential" but fundamental. Sir George Schuster is as sweet and persuasive as ever. He promised to consider "sympathetically" any "sound" proposals for the inauguration of Land Mortgage Banks by the Provincial Governments. And the House cheered the "announcement"!

* * *

The Japanese treaty is still being "drafted." The Indian side blames the Japanese for being unable to speak in English and for being poor draftsmen. The Japanese blame the Indian Delegates for being "busy" with the Assembly and making that a constant excuse for delay. And as the cost of the Delegation is now borne by the Japanese Government, the anxiety of the Japanese to clear out as quickly as they can is easily understood. May this be the last fortnight of their stay in India.

SOUTH INDIA

(From Our Correspondent)

Madars, January 31

The extremely critical plight of the agriculturists in this Presidency has resulted in a large number of conferences held all over the various districts with a view to ventilate common grievances and with a view to formulate common demands. Of such conferences, to some of which I had made reference in my earlier communications, the most important was the Madras Presidency Ryotwari Landholders' Conference held in Madras last week-end. Important resolutions were moved and the speakers came from all sections and parties. The President was Mr. C. N. Muthuranga Mudaliar who made a forceful and telling speech. He made a complete catalogue of the special difficulties confronting the ryots in this province. Among such handicaps he mentioned the following:

1. Out of the cultivable lands in the province, only a third is irrigated and the rest depends entirely on rains for cultivation.
2. The ryot has work only for a portion of the year and the majority of the population have no secondary occupation.
3. The average holding is very small.
4. The result has been that the ryot even in the best of times cannot be sure of even a single meal a day.
5. There is considerable pressure on the land with the result that inferior soils are brought under cultivation. This means that even when the price of agricultural produces are high, agriculture does not pay except in a very small way.
6. Owing to want of funds the ryot is not able to take advantage of the improved methods of cultivation or to purchase improved implements or to get good seeds.
7. Both he and his cattle are half-starved.
8. The ryot is bad off, in all conscience, even in ordinary times; and the breaking point has been reached owing to the catastrophic fall in prices of agricultural produce and the persistence of depression.
9. There has been difficulty in finding a market for some of his produce.
10. Cash crops like sugarcane and groundnuts do not seem to have paid even the cultivation expenses.
11. While the ryot has been in such a predicament, the tax collectors have shown an extra vigour and persistence.
12. Indebtedness has begun to tell most heavily. On account of the fall in prices, the actual value of money has increased twofold and threefold. The burden of the debt has increased correspondingly so that what was redeemable with, say, one acre of land will now require two to three acres to redeem.
13. The consequence is that debts are not paid and lands are put up for sale. It has been none too easy to find purchasers for land.
14. The land revenue of the Presidency had doubled in the course of 40 years from Rs. 392 lakhs to Rs. 768 lakhs. The Madras Presidency is the heaviest taxed of all the provinces in India in the matter of land revenue.

The Government who went out of its way to restore the entire cut of 10 per cent. has remained unresponsive to the piteous appeals of the ryots. It is hardly believable that distress on such an intensive and extensive scale could exist in a province whose Government claims to have balanced its budget and, more, to have achieved a surplus, sufficient to justify the entire restoration of the cut.

Even the Government of India, the railways and all other provincial governments, restored only 5 per cent. of the cut. Between the sufferings of a few high-paid officials on account of the continuance of a 5 per cent. cut and the distress of the millions and millions of agriculturists, the Madras Government chose to pay due heed and over-generous consideration to the officials.

If the budget was balanced, it is no indication of the revenue being within the taxable capacity of the masses. In South Indian familiies, it is an age-long custom to keep stores of value in the form of silver vessels and gold ornaments. It is not out of current income that taxes have been paid. It is by the disposal of these stores of value that the demand of the tax-gatherer has been met. But this could not go on indefinitely. The stores of value have been exhausted. There is no more reserve to fall back upon. Further demands on the same scale would mean that the Government will have to put coercive measures into operation.

The main resolution of the Conference was moved by Mr. T. R. Venkatarama Sastri who was lately Advocate-General and who, after a few days' tenure as Member of the Executive Council, resigned it. Mr. Sastri himself asked, on another occasion, for a revision of 25 per cent. He now advocates a reduction of 33⅓ per cent. because he is now "convinced that unless such reduction is given, no substantial relief can be given to the ryots."

An appeal was also made to the members of the Legislative Council, elected and nominated, Indian and European, to vote unanimously for this reduction when the budget would be considered by the Legislative Council. All ryotwari landholders in the province, who have votes, are urged to wait in deputation on their respective elected representatives in the Legislative Council and persuade them to act in terms of the resolution passed in the Conference.

As regards agricultural indebtedness, a suggestion was advanced that a Debt Conciliation Board should be created for preventing the impending catastrophe to the landed interest in the country in view of the abnormal fall of prices of land and of the unwillingness of creditors to take the lands for reasonable prices and of the difficulties of debtors to discharge the burden on reasonable and just terms. Madras has suffered from the acutest agricultural depression and is yet behind other provinces in regard to the adoption of relief measures for the debt position. Punjab undertook legislation to help the ryot and has under consideration measures for supplementing the earlier legislation. The United Provinces passed three or four bills in this connection as emergent legislation. A Debt Conciliation Bill is now before the Central Provinces Legislature. The Governor of Bengal has also made an announcement that his Government would be taking steps for creating a Debt Conciliation Board. It is, therefore, time enough that the Madras Government also bestirs itself in this matter.

As amendment to the proposal for a Debt Conciliation Board, a minority section urged the plea for a moratorium. This section emphasised that the need for giving temporary but immediate relief to the agriculturists of this province is imperative and urgent and suggests that the Government should in consultation with the members of the Legislative Council and other representatives of the ryotwari landholders in the province, take immediate steps in this behalf by way of declaring a moratorium for the debts of the agriculturists for a period of two years and introducing legislation to scale down the debts of the agriculturists in proportion to the fall in prices. The moratorium proposal did not, however, find favour with the majority of the members in the Conference as it was felt that the position of the agriculturists would become still worse if a moratorium was declared immediately as creditors would stop advances to the agriculturists and the position of the latter would, therefore, be further jeopardised. The original suggestion for a Debt Conciliation Board was passed unanimously and it now remains for the Government to undertake suitable legislation in this behalf.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

FOREIGN TRADE IN 1933

Another of those Roosevelt weeks which recur so frequently in the history of the City for the last few months! Large scale buying of gold in the London market has, as it turns out, preceded Mr. Roosevelt's now famous Message to Congress and the Monetary Bill. During the middle of last week, there has been considerable amount of American buying of gold; and while formerly it was believed that the purchases were on private account, it is now more or less certain that the "undisclosed buyer" is the Reconstruction Finance Corporation. The purpose of such purchases is most clearly the counteraction of the forces that tend to put up the dollar, which shows that the gold puchase policy, which was part of the American offensive in November, has now become a means of staving off the evil of an unwanted rise in the dollar. There is little warrant yet for connecting these purchases of gold, despite the advance in the gold premium in London from 4½d. to 11d., with a new desire on the part of the American authorities to make their gold price effective. For not only have these purchases been so far utterly ineffective to bing the price of gold level with the American official price, but it is certain that more purchases will have to be made in the future, too. And it is not unreasonable to suppose that the American authorities have nearly given up the idea of regulating prices or exchanges by arbitrary changes in their gold price.

Mr. Roosevelt Solves no Riddle

The purely defensive character of the recent purchases of gold led many to regard as likely an early stabilisation of the dollar. And once one's mind works in that direction, it is not difficult to find plausible reasons. The need of the American Treasury for the profits of devaluation, the necessity of stabilisation for the completion of any programme of new financing—these have been trotted out as conclusive practical reasons for Mr. Roosevelt turning a new leaf, so to say. Even after the news of Mr. Roosevelt's message to Congress came, there was not much clear apprehension of its exact significance. The conflicting nature of the views expressed by prominent financiers and economists shows that a little more time was necessary for Great Britain to appraise the significance of Mr. Roosevelt's pronouncements. Commenting on the President's declaration on the question of the gold value of the dollar Sir Josiah Stamp, for instance, said, "It is apparently merely a limit. If it is a definite objective, it is good, in so far as we then know where we stand. If the dollar depreciation is much greater than the rise in prices then we shall have severe competition. If it is the same as the rise in prices, then it may have no effect on us except as it may help the American situation and indirectly help us." Lord Melchett was less cautious and more sentimental when he observed: "President Roosevelt has taken a courageous step and, I believe, will go far towards finding the only rational solution of his financial problems. Great Britain will be bound to follow Roosevelt's devaluation policy. Otherwise, we shall be beaten on the international markets. I hope that our currency policy will be modelled in order to fit in with that of America rather than that of France". Sir George Beharrell, past-President of the British Federation of Industries, said, "President Roosevelt's message really does not carry us much further; in any case, the gold question is only one of many factors in the problems facing the world at the present time. Until Britain, France and the United States, the three largest gold holding countries, get together and fix up prices, there cannot be any real stability".

British opinion lacks Clarity

So far as the City is concerned, the first thought was that the President's message was not a fulfilment of the hope of early stabilisation. For one thing, the upper limit of revaluation of 60 per cent. pointed out to the possibility of yet further depreciation in the dollar. And this raised the nice question whether, in the event of America taking steps to reduce the dollar to that level, Great Britain would follow suit or endeavour to combat such a move on the part of America. For the present, it looks as though the problem will not arise immediately in all its gravity. For the American authorities are now confronted with the unwelcome phenomenon of repatriation of American capital. There is ample evidence to show that such repatriation has already started. The strength of the dollar in recent weeks is due largely to such a move. The talk of early stabilisation has had a great deal to do with it. And it may be said that, though President Roosevelt has by a mere fixation of the upper limit of revaluation ensured for himself a free hand in monetary policy, he has at the same time afforded what the exporteres of American capital to foreign countries have so long been waiting for. The new Monetary Bill has removed at a stroke all fear of reckless inflation. By fixing the two limits at 50 and 60 per cent., the investor in America is enabled to know where he stands. And the fact that the demand from abroad has been generally for American bonds rather than equities shows that it is a genuine repatriation of capital. This must tend to put up the dollar in the future; and it is a question whether the exchange fund of 2,000 million dollars will not get itself nearly spent in combatting this movement.

Cabinet Meeting on Exchange Policy

But all this does not reduce the importance of Britain clarifying her plans and policies in the future. It is understood that the new gold policy of the American President was discussed on January 16th at the first Cabinet meeting since the adjournment of Parliament in December. It was, of course, realised that the whole question revolved round the immediate objective of the American authorities, whether they would take steps to raise American domestic prices quickly to the level at which a 60 per cent. dollar would be justified, or whether they would try to depress the exchange to that level, leaving a longer time lag for prices to adjust themselves to the new level. In the former case, the advantage to American exports over those of Britain in foreign markets would be reduced before long, and there would be no fight on the exchange front between the two Exchange Funds. In the latter case, Britain's exports would be hard hit and British financial policy will necessarily have to be planned with reference to the needs of British industry.

The Three Alternatives

In case a clash between Britain and America is precipitated Britain would have to choose from three possible alternatives. She could, in the first place, permit further depreciation in sterling without any concern for the franc or its future. Or, she might formulate a policy of cooperation with France in an attempt to foil the efforts of the American authorities and try to force up the exchange value of the dollar. The third policy would be that of affording to trade such help as is in the power of the Government to bestow and lend support to the Bank of France in maintaining the franc. It is yet difficult to say what policy will ultimately commend itself. The difficulties of the position, the uncertainty of President Roosevelt's immediate plans and the natural

Air Mail Week

temperament of the Britisher alike point to a policy of wait-and-see as the wisest and the most feasible. But as the days pass on, there is less and less hope of any agreement being arrived at between Great Britain and America on the vexed question of stabilisation. Mr. Morgenthau's sigh for an exchange fund at the present moment is regarded in British circles as an ominous portent of an exchange war. And generally speaking, public opinion is less favourable than ever to any policy calculated to jeopardise the interests of British trade or to tack sterling on unduly to other currencies. Probably, it is felt that a dangerous weakness of the franc is yet far off. For, to withdraw gold from the Bank of France it is necessary in the first place, to buy francs ; which tends to make it bullish. Not till the world sees a large-scale efflux of gold will confidence in the franc be impaired and a flight therefrom precipitated.

Channels of New Investment

It is refreshing to turn from the field of doubt and speculation to the sphere of indisputable fact, from perplexing anxieties to hearening achievements. By all tokens, 1933 has broktn all past records in the matter of registration of new companies. The figures contained in the annual report of Messrs. Jordan and Sons Ltd., the Company Resistration Agents, Chancery Lane, are illustrative in this connection. No less than 11,384 new companies were registered of which 330 were "public" and 11,054 private as against only 255 public ad 9,949 private companies floated in 1932. The total outlay of capital involved in these flotations does not show such a record increase. Still the outlay is sufficiently considerable to attract attention ; for the total outlay in 1933 is £94.5 millions as against only £70.2 millions in 1932. Arranged in the order of precedence of the first twelve classified groups as regards (*a*) the number of registrations and (*b*) the total capital invested, the figures are as under :

(Table(a)

Clothing	1,004
Food	973
Land and buildings	813
Builders	714
Engineers	620
Chemicals	601
Merchants	569
Motors	518
Electricity, gas and aater	499
Textiles	454
Investment, finance and banks ...	417
Furniture	302

Table (b)

Land and buildings	19,508,503
Food	14,179,678
Investment, finance & banks ...	10,775,659
Engineers	4,747,415
Mines and quarries ...	6,772,883
Textiles	3,278,733
Farmers & planters	2,855,968
Clothing	2,720,416
Builders	2,590,870
Kinemas	2,258,290
Merchants	2,224,606
Electricity, gas and water ...	1,832,096

Commenting on this spectacular increase in the new flotations, one is reminded of the Finance Act of 1932 which effected a reduction in the ad valorem duty on companies' capital from £1 to 10sh. per £100. It is, of course, difficult to say whether any considerable part of the company formations during the year ca be attributed to this relief in capital duty ; probably this has not been great. More than anything else, the figures show that it is becoming more and more popular for individual traders and partnership organisations to convert their business into private limited companies. Of the 11,054 private companies, a very large number is represented by such conversions of existing business. To this, must, of course, be added the private subsidiary companies formed by public companies. Such leanings towards the popularity of private limited companies have been commented upon widely ; and the annual report of Jordan & Sons Ltd. observes that "these figures may tend to discount the theory that the day of small individual businesses is over and that rationalisation and amalgamation have left no room for private enterprise".

Improvement in Shipbuilding

In the shipbuilding industry also, there is a distinct note of optimism. The influx of enquiries towards the end of December 1933, has resulted in an increase of 27,729 tons in the merchant vessels under construction in Great Britain and Ireland as compared with the low figures for the previous quarter. The total tonnagge was 331,541, which was 106,044 tons greater than the corresponding tonnage built at the end of December 1932. That the position is not very far from satisfactory will be seen from the fact that 43.8 per cent. of the total tonnage under construction in the world is being built in Great Britain and Ireland and 56.2 per cent. abroad. Though this may not reach the 1929 level, it is considerably above the 1930 level and the present rate of progress, it can confidently be expected that the 1934 level will show signs of further improvement.

The Home Railway traffic returns issued on the 17th inst. reveal record increase in the traffic receipts during the week. The increase for the last week was £208,000 comapred with the corresponding week of the last year ; and when it is noted that this follows an increase of £123,000 in the first week of the New Year and of, £195,000 during the Christmas week, it looks as though the Home Railways have a

prosperous New Year, before them at least judging from the results of the first two weeks. Such aimed activity in the Railways had its results felt in the Stock Exchange when the rail securities are reported to have recorded a slight rise. L. M. S. prefrerences led the advance, the 1923's rising 2 to 54½, and the 4 per cents. by 1 to 75¼. Southern preferred was prominent among the ordinary stocks with a gain of 1 to 75 1/4.

Trade Pacts

The commercial treaty that Britain is negotiating for with the Soviet does not appear to be in sight. Stalin's recent statement that a settlement would soon be reached was received with satisfaction as being a hopeful sign and it looked as though the pact would be signed before long. But a statement was made by Sir John Simon in the Cabinet that the progress has been tardy and the settlement would be put off by at least some months. He is reported to have said that some of the issues are the subject of diplomatic discussions in Moscow and that these are delaying negotiations. The actual settlement of these questions, which, by the way, are the Lena Gold Field's claim for compensation, the use of British shipping, the purchase by Russia of British herrings and the so-called torgsin question —would appear to be more a matter of form than principle and as such presents difficulty in arriving at an understanding. It is however reported that there is earnestness on the part of both the countries to reach an understanding as to the form the agreement on these four points should take and this should hasten the progress of the negotiations.

Foreign Trade Policy

Businessmen in England are determined to march forward to an era of ray and hope from that of gloom and depression. They look forward to a period of stable exchanges, flourishing trade and an untrammelled world-wide market for the exchange of goods. They are urging the British Government to amend their trade policy during the New Year accordingly. The Association of the British Chambers of Commerce has indicated the trade policy that the Board of Trade is to fololw. In the course of the statement, the Association observes as follows: "World markets cannot revive, commercial exchanges cannot balance and currencies cannot be maintained

Adventures of Mr. Speedy—No. 1.

TACKLING tigers with a Camera is no simple task but taking snapshots with the new Isochrom Film is the easiest thing imaginable, for the **NEW ISOCHROM, 3,000 H.&D.**, has six definite advantages over ordinary films. It turns the densest amateur into a perfect photographer.

Faster Speed; Complete Anti-halation; Fine Grain; Latitude in Exposure; Ortho-chromatic Quality; Five Different Layers—all help to make the New Isochrom Film the biggest news for amateur photographers since cameras were invented.

Just try a spool this week-end and you will become a permanent Isochrom user.

in stable relation to one another until the creditor nations take payment from a debtor world in goods and services to offset their credit position. This obligation rests primarily with the common creditor of the world; but next upon Great Britain and other nations in their relations to their debtors."

To enable other creditor nations to obtain payment from their debtors and thereby restore the circle of world trade every effort should be made, the Association states, as also to convince the world's chief creditors that they cannot be paid either for debts or for their exports of goods and services unless they accept payments in foreign goods and services. This suggests that, until a creditor nation supports the exchanges by accepting payments in goods, it should not be accorded the most favoured nation treatment in the markets of Great Britain. The Association further considers that Great Britain and the other nations willing to join her in an effort to restore world trade should agree on the principles to be observed and should concede most favoured nation terms to one another. Among these principles should be an obligation on each creditor nation to accept such goods and services as will offset its credit position and on all co-operative nations an obligation to stabilise prices and currencies and to restore the freedom of the seas for peaceful commerce without flag discrimination or uneconomic subsidies.

With this end in view bilateral agreements should be negotiated and should be framed as far as possible to lead naturally to the formation of group of countries which are prepared to trade with one another on the agreed principles. The Association also suggests the classification of British tariff under three classes: (1) The Imperial Preference tariff to be granted to the countries of the Empire, (2) an intermediate tariff to be granted to the most-favoured nations and (3) a general tariff applicable to all other countries. It is also suggested that the Import Duties Advisory Board should keep a close watch on the working of the prevailing tariffs, exchange restrictions, special agreements, etc., and recommend such revisions as may be considered necessary in the light of the above principle.

PROSPECTS OF STABILISATION

The Monetary Bill.

Shrewd speculation often robs Mr. Roosevelt's plans and proposals of their element of surprise. Such of the week's developments have been, in the main, intelligently anticipated in many parts of the world. But Mr. Roosevelt has a way of disproving these forecasts in important details. All that the world knew was that Mr. Roosevelt is faced with a deficit in the national budget which cannot be met purely by taxation, that he has set his eyes on the profits derivable from a revaluation of the gold reserves, and that no such revaluation can take place unless the present uncertainty of the value of the dollar is eliminatd. Upon this basis of known and indisputable fact, a somewhat disproportionately heavy superstructure was raised. It was believed that, partly for the considerations mentioned above and partly on account of the failure of the gold purchase policy, Mr. Roosevelt would be less disposed than formerly to stabilise the value of the dollar and that, to eliminate the danger of other nations undercutting the dollar in gold value, he would take steps to bring about an international agreement for the stabilisation of currencies. Rumour was, therefore, rife that an early stabilisation was imminent, that agreement, had very nearly been arrived at between the United States, Great Britain and France in regard to the exchange value of their currencies, and that President Roosevelt was at the point of approaching Congress for legislative sanction and confirmation of the policies he intended to pursue.

Mr. Roosevelt's Method

It ultimately turns out that Mr. Roosevelt has a way of securing his immediate objectives without detriment to the policy of a free-hand in ulterior plans and policies. Though the last nine, ten months have been full of presidential prononuncements and Congressional acts, the veil of secrecy and mystery has never been lifted completely off the doings of the Administration in America. The Administration is no nearer laying its cards on the table than at any earlier stage of the recovery programme. The present vogue of official interviews, of radio talks, messages and recommendations to congress and presentation of bills for passage through both the Houses helps the authorities to feel their way and mark time where time is the thing. The proposal of trans-

ferring to the Treasury the gold reserves of the Federal Reserve Bank is an apt instance to the point. The idea has been broached to the public for some time. The strength of opposition from the Federal Reserve Banks was gauged. Mr. Eugene Black was won over ; and sentiment in the country was given time to recognise that, even if the member banks had a proprietory right to the gold in the Federal Reserve Banks, there could be no fundamental difference between banks and individuals, so far as ownership of the nation's gold is concerned. And finally when the time is ripe, the President comes forward with his Message to the Congress outlining the general ideas behind his Monetary Bill.

Message to Congress

The purpose of the mesage is to ask Congress for certain additional legislation to improve the financial and monetary situation "in conformity with the progress we are now making in restoring a fairer price level and with our purpose of arriving eventually at a less variable purchasing power for the dollar." The measures indicated are

(1) the vesting in the Government of the nation the title to the possession of all monetary gold within its boundaries,

(2) the stipulation of the upper limit of the permissible revaluation of the dollar,

(3) the empowering of the Secretary of the Treasury to buy and sell gold at home and abroad and to deal with foreign exchange as such,

(4) the creation out of the profits of any revaluation a fund of 2,000 million dollars for such purchases of sales of gold, foreign exchange and government securities as the regulation of currency, the maintenance of the credit of the Government and the general welfare of the United States may require ; and

(5) certain amendments of existing legislation relating to the purchase and sale of gold and other monetary matters which would add to the convenience of handling currency problems in that field.

The message contains, strangely enough, an enunciation of principles which are, no doubt, axiomatic in theory, but which raise in their practical application many a debatable problem. Mr. Roosevelt speaks as though the issues connected with the transfer of the title to reserves of gold can can be settled merely by reference to the elementary principles of monetary science. But nothing succeeds like success ; and the President's way of settling these controversial questions by the enunciation of specious theories of economics is indeed, a success. The transfer of gold in bulk is essential only for the payment of international trade balances. "Therefore," says President Roosevelt, "it is a prudent step to invest in the Government all monetary gold within its boundaries.". "We have already called in", he goes on, "the gold which was in the possession of private individuals and corporations. There remains, however, a very large weight of gold bullion and coins which is still in the possession or control of the Federal Reserve Banks. Although under the existing law there is an authority by executive act to take the title of the gold in the possession and control of the Federal Reserve Banks, this is a step of such importance that we prefer to ask Congress by specific enactment to vest in the United States Government the title to all supplies of American-owned monetary gold with provision for payment for it in gold certificates."

Hopes for Silver

Mr. Roosevelt argues that with the establishment of this permanent policy of placing all monetary gold in the ownership of the Federal Government, the time is come for a more certain determination of the glold value of the American dollar." But he contends that because of the world uncertainties it is not desirable in the public interest that the exact value should now be fixed. He is therefore content to ask for fixing the upper limit of the revaluation at 60 per cent., so that the world knows that the range within which the President can exercise his dictatorial powers in matters of finance would be between 50 and 60 per cent. The rest of the measures follow from this decision ; and so long as the value of the dollar is not finally fixed, it will be necessary for the Government to deal in gold and foreign exchanges. And for this purpose an exchange equalisation fund of 2,000 million dollars provided from the profits of gold revaluation will be absolutely necessary. As regards silver,

Air Mail Week.

Mr. Roosevelt recalls the proclamation providing for the coinage of newly mined silver and the increase of reserves of silver bullion and expresses, the hope that there would be an extension of the monetary use of silver in all parts of the world when the 66 governments, which signified their assent to the Silver Agreement at the London Conference, proceed to give force thereto.

Hopes Belied

It will be seen from all this that the more extravagant hopes held in regard to an early stabilisation of the dollar and its necessary corollary of an agreement amongst the principal powers in regard to the stabilisation of exchanges, have been far from fulfilled. All those, who banked so much on Mr. Roosevelt's immediate need for the profits of gold revaluation, now find to their chagrin that Mr. Roosevelt has, by setting what he calls an upper limit of revaluation, enabled himself to appropriate for the time being the required amount. The practical results of the masures now embodied in the Monetary Bill are that the 3,565,290 dollars of gold stocks of the Federal Reserve Banks would be made over to the Treasury in exchange for good certificates which shall at all times be secured by gold in the Treasury for each dollar of such weight and finenss as may be established from time to time. It is interesting to point out in passing that as a negative justification for the measure which he has taken Mr. Roosevelt urges that, if at any time in future, Congress should decide to increase the the gold value of the dollar, the loss resulting from the revaluation of gold will not fall upon any of the private parties but upon the State itself. A poor consolation, to those who had looked to retaining the profits on gold which may be said to be a bird in hand as against none in the bush. There has also been created the 2,000 million dollars of exchange fund. It has proved to be a futile hope that, as a result of the Treasury's receipt of the profits of gold revaluation, the Goverment's need of new financing would be reduced ; for Mr. Morgenthau has announced that he intends to proceed with plans for borrowing up to 10,000 million dollars. Equally, there is every threat of a currency war though on the basis of technical reasons, which have never counted with Mr. Roosevelt, there are many who urge that the curency war is unlikely and that neither Great Britain nor the United States would be so foolish as to engage in a war, which would have a consequence equally unwelcome to both, namely, the forced departure of France from th gold standard.

Hysterical Opposition

The reactions of Mr. Roosevelt's opponents to the enuncition of the new proposals are of little significance to the future trend of affairs. But it is interesting to note that the wildest language has been used in criticism of the new policy. Republicans in the Senate classify the new measures as "mere robbery." Dr. Sprague told the House Coinage Committee that dollar revaluation at 60 cents is out of line at present price levels and is a disturbing factor for the future and, what is more, that it would bring retaliatory action from foreign countries. Senator Carter Glass who has forsaken the President in this matter, asks: "What excuse is there for a man to steal when he does't have to"? The silver interests have nothing to propitiate them, but they have not come out into the open ; and it is certain that whatever small groups may do, the Prsident will carry the day.

Business Trends

The course of business continues to be heartening. A new plan for the control of cotton production has been evolved by Senator Bankhead. Senator Bankhead recognises that the previous schemes of restriction of acreage have been defeated of their purpose by the tendency towards intensive cultivation in the reduced acreage. He, therefore, suggests that licensing of cotton gins as a means of controlling cotton production. Mr. Wallace, Secretary for Agriculture, is supposed to be agreeable to the change and will confer shortly with Southern Congressional leaders. There can be no doubt that, when Senator Bankheaid's suggestions are put into operation, restriction will be much more effective than it has been in the past. Steel operations are now 34.2 per cent. of capacity. According to the Iron and Steel Institute, this marks an increase of 3½ per cent. on last week and it is now widely expected that a peak level of 60 per cent. before summer is more than likely. Steel shares are as a consequence going strong on the Exchange.

GERMANY

DR. SCHACHT'S NEW GESTURE AND THE STANDSTILL AGREEMENT

Preliminaries to Standstill Conference

Nearly all the creditor nations have sent their notes of protest against Germany's discrimination in favour of Holland and Switzerland in the matter of payment of her interest obligations. Now the delegates are beginning to arrive in Berlin for the Conference to take place on the 22nd instant. The American creditors of German long-term and medim terms debts will be represented by Mr. John Foster Dullas for the American issuing houses and by Mr. Laird Bell for the Foreign bondholders Protective Committee. The delegation from the Dutch Government has also arrived to open ngotiaions with the German Government for the conclusion of a separate transfer agreement to provide for the full cash payment of interest. The outcome of these negotiations will be submitted to the meeting of the Creditors' Committee together with the Swiss Agreement. Germany has also prepared her case for submission to the Conference and it is understood that the replies to the British and American Transfer Notes are now ready. These are expected to be communicated to the respective governments shortly.

Dr. Schacht has already made his position clear more than once. As early as December last he has explained that the expectations of Germany's foreign export surplus were not being fulfilled and that she would be facing a monthly deficit of Rm. 19,000,000, if the 50 per cent transfer quota were to be maintained. Even after the reduction of the cash portion of the obigations to 30 percent there would still be a deficit of Rs. 11,000,000. It has also been pointed out that the aim of Germany was to maintain the stability of the Reichmark based on the gold standard at all costs. A veiled threat was also hinted that if Germany was forced to concede more favourable terms, there would be no other alternative left to her but to go off the gold standard, depreciate the mark and pay her obligations in the depreciated currency. What exactly the German reply to the Transfer Protests, on the present occasion says, the available reports do not exactly say; but it appears that it should only be a recapitulation of the ground already traversed.

The British long-term and medium term creditors' Committeee have probably anticipated this reply, and have asked the Reichsbank that they should be put in possession of full information concerning the matters to be discussed in the Conference. The Committee is still without any information on this score which it considers necessary and have therefore asked the Reichsbank to postpone the Conference until later in the week.

The latest figures of German export surplus available are not encouraging, and only confirm the fears of a progressive shrinkage expressed by Dr. Schacht. Germany had an export surplus of R. M. 667,800,000 in 1933 which is R. M. 404,900,000 below the figures for the year 1932. Imports totalled R. M. 4203,600,000 and exports R. M. 4871,400,000 as campared with R. M. 4666,500,000 and R. M. 5739,200,000 respectively in 1932. The reduction of 38 per cent. in Germany's export surplus from R. M. 1073,000,000 in 1932 to R. M. 668,000,000 registers a further decline from the record figure of R. M. 2872 millions in 1931. The figures for the month of December are, however, a bit encouraging. The exports were R. M. 423,800 and imports 374,400,000 as against R. M. 394,300,000 and 351,400,000 respectively for the month of November 33. Whether Germany will continue at the same rate of progress is problematical, particularly in view of the new trade negotiations that are being carried on by all other countries for restricted imports. The French Government have definitely decided to denounce the Franco-German treaty of 1927, following Germany's refusal to suspend the Jan. 13 decree reducing French imports into Germany.

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

Air Mail Week.

In the meantime repatriation of German Dollar bonds is taking place on a pretty heavy scale. The Geramn holders of these bonds are busy converting them into Reichmark scrips. Apart from the Dollar bonds already in German hands purchase of such bonds is also being made abroad. It is reported that some German buyers are selling abroad their foreign securities, using the proceeds, for the purchase of these bonds, while others are making use of their surplus export profits for the same purpose. This heavy demand has had its effects on the prices of these bonds and already a wide difference is noticed in the price abroad and at home necessitating often a payment of "premium" to secure a 'right' to purchase the bonds abroad. One report says that the premium has now jumped almost to 50 per cent compared with only about 28 per cent at the end of December reflecting on the heavy increase in the demands for such 'rights.' This premium should however fall drastically as soon as the conversion offers of the debtor companies have expired, which will not be long ahead. Moreover there is also the pending issue of the German transfer scrips in America which is anticipated about the next week and this must have its influence in bringing down this spurt in premium. If the scrip comes on the market and flows back to the Golddiskontbank, this institution will again come in possession of an adequate amount of this scrip. It is probable that this scrip may be used to subsidise German exports, whereas it has now mainly to use the German dollar bonds for the purpose. The demand for the dollar bonds is thus likely to be reduced.

Such a new scrip will also have its effect on the discount on the Registered marks. Demands for Reichsmarks continues at a fair rate for export purposes as well as for long-term investment and travelling purposes. The discount for blocked marks out of credit repayments has declined to about 18.19 per cent compared with about 20 per cent a fortnight back. This new scrip may possibly result in an increase in this discount on registered marks.

Rs. 20/12

WORLD UNEMPOLYMENT DECLINE IN 1933

The unemployment statistics published by the International Labour Office for the last months of 1933, like those for the second and third quarters of the year, continue on the whole to show an improvement. A comparison of the present situation with the situation in the corresponding period of 1932, which eliminates seasonal movements, indicates that there has been a diminuation of recorded unemployment in Australia, Belgium, Canada, Chile, Danzig, Denmark, Estonia ,Finland, Germany, Great Britain, Hungary, the Irish Free State, Japan, Latvia, the Netherlands, Portugal, Rumania, the Saar, the United States and Yogoslavia.

In a certain number of these countries the employment figures confirm the favourable impression obtained from the unemployment statistics. In the United States, for instance, the rise in the employment index is very marked: 73.5 in October, 1933, as compared with 59,6 in October, 1932. Similarly, in Great Britain, the index of employment for December rose from 91.6 in 1932 to 97.5 in 1933. In Canada, for November, it rose from 71.1 to 76.6 ; in Japan, for August, from 81.8 to 90.0 ; and in Italy, for October, from 70.5 to 73.6. On the other hand, unemployment was more severe in the autumn of 1933 than in that of 1932 in Bulgaria, Czechoslovakia, New Zealand, Norway, Palestine and Poland.

A comparison of the most recent figures, not with those of a year ago, but with those for the preceding quarter will be affected by seasonal movements and some increase of unemployment might be expected in the Northern hemisphere. In fact, however, there has been a fall in the number of unemployed in most countries, including some, such as Czechoslovakia, New Zealand, Palestine and Poland, where unemployment was greater than a year ago.

It is important to remember that owing to the diversity of methods of compilation the figures for the different countries cannot be compared. It is also essential to note that even within the same country the figures for two different dates are not always comparable. Owing to legislative and administrative changes or the fact that unemployed persons who have exhausted their right to benefit no longer appear in certain statistics, it may happen that a decrease in the published figures does not represent a corresponding decrease in the volume of unemployment. Moreover, the figures hardly ever take account of short time.

These reservations must be borne in mind in considering the following figures, which are derived from various sources: compulsory unemployment insurance statistics, voluntary unemployment insurance statistics, trade union returns, employment exchange statistics, etc.

Compulsory Unemployment Insurance Statistics.

Austria:—300,426 unemployed (or 26.3 per cent.) in December, 1933, as compared with 329,707 (28.9 per cent.) in December, 1932.

Germany:—3,714,107 unemployed (or 20.1 per cent.) in December, 1933, as compared with 5,355,428 (or 28.9 per cent.) in December, 1932.

Great Britain and Northern Ireland:—2,308,779 unemployed (or 17.9 per cent.) in December, 1933, as compared with 2,849,025 (or 22.2 per cent.) in December, 1932.

Voluntary Unemployment Insurance Statistics.

Belgium:—135,105 unemployed (or 13.5 per cent.) in September, 1933, as compared with 167,212 (or 19.5 per cent.) in September, 1932.

Czechoslovakia:—213,763 unemployed (or 14.3 per cent.) in November, 1933, as compared with 173,706 (or 12.4 per cent.) in November, 1932.

Denmark:—90,389 unemployed (or 26 per cent.) in December, 1933, as compared with 112,506 (or 35.1 per cent.) in December, 1932.

Netherlands:—152,002 unemployed (or 29.5 per cent.) in December, 1933, as compared with 161,035 (or 30.5 per cent.) in December, 1932.

Switzerland:—74,927 unemployed* (or 14.2 per cent.) in October, 1933, as compared with 91,037 (or 18.6 per cent.) in October, 1932.

Trade Union Returns.

Australia:—104,560 unemployed (or 25.1 per cent.) in October, 1933, as compared with 122,340 (or 29.6 per cent.) in October, 1932.

Canada:—29,563 unemployed (or 19.8 per cent.) in November, 1933, as compared with 35,600 (or 22 per cent.) in November, 1932.

Norway:—15,682 unemployed (or 31.3 per cent.) in November, 1933, as compared with 15,512 (or 31.6 per cent.) in November, 1932.

Sweden:—77,703 unemployed (or 19.8 per cent.) in November, 1933, as compared with 92,868 (or 22.4 per cent.) in November, 1932.

Statistics of Employment Exchanges or other Estimates.

Austria:—354,899 unemployed in October, 1933, as compared with 345,148 in October, 1932.

Bulgaria:—20,477 unemployed in November, 1933, as compared with 16,482 in November, 1932.

Chile:—58,510 unemployed in September, 1933, as compared with 125,307 in September, 1932.

Czechoslovakia:—692,101 unemployed in December, 1933, as compared with 608,809 in December, 1932.

Danzig:—25,486 unemployed in December, 1933, as compared with 35,507 in December, 1932.

Estonia:—3,881 unemployed in October, 1933, as compared with 5,957 in October, 1932.

Finland:—42,151 unemployed in November, 1933, as compared with 73,379 in November, 1932.

France:—286,882 unemployed in December, 1933, as compared with 292,816 in December, 1932.

Hungary:—50,978 unemployed in October, 1933, as compared with 65,436 in October, 1932.

Irish Free State:—82,565 unemployed in December, 1933, as compared with 102,747 in December, 1932.

Italy:—1,006,215 unemployed in December, 1933, as compared with 1,038,757 in December, 1932.

Japan:—418,177 unemployed in August, 1933, as compared with 510,901 in August, 1932.

Latvia:—4,404 unemployed in November, 1933, as compared with 13,806 in December, 1932.

Netherlands:—302,014 unemployed in December, 1933, as compared with 304,875 in December, 1932.

*Wholly unemployed and temporarily stopped.

New Zealand:—51,872 unemployed in October, 1933, as compared with 49,447 in October, 1932.

Norway:—39,723 unemployed in November, 1933, as compared with 38,807 in November, 1932.

Palestine:—18,000 unemployed in November, 1933, as compared with 15,120 in November 1932.

Statistics of Employment Exchanges or other Estimates.

Poland:—202,065 unemployed in October, 1933, as compared with 150,446 in October, 1932.

Portugal:—21,426 unemployed in July, 1933, as compared with 42,666 in July, 1932.

Rumania:—17,551 unemployed in October, 1933, as compared with 21,862 in October, 1932.

Saar:—37,096 unemployed in December, 1933, as compared with 41,962 in December, 1932.

Sweden:—137,457 unemployed in December, 1933, as compared with 109,847 in December, 1932.

Switzerland:—71,721 unemployed in December, 1933, as compared with 68,286 in December, 1932.

United States:—10,076 unemployed in October, 1933, as compared with 11,586,000 in October, 1932.

Yugoslovia:—10,043 unemployed in October, 1933, as compared with 10,185 in October, 1932.

Employment indexes

(base: 1929=100)

Great Britain:—97.5 in December, 1933, as compared with 91.6 in December, 1932.

Latvia:—90.0 in October, 1933, as compared with 83.0 in October, 1932.

Czechoslovakia:—79.8 in October, 1933, as compared with 85.7 in October, 1932.

South Africa:—92.6 in September, 1933, as compared with 85.8 in September, 1932.

Canada:—76.6 in November, 1933, as compared with 71.1 in November, 1932.

Estonia:—83.8 in September, 1933, as compared with 81.6 in September, 1932.

United States:—73.5 in October, 1933, as compared with 59.6 in October, 1932.

Japan:—90.0 in August, 1933, as compared with 81.8 in August, 1932.

Italy: 73.6 in October, 1933, as compared with 70.5 in October, 1932.

Poland:—64.5 in September, 1933, as compared with 64.1 in September, 1932.

Sweden:—86.0 in November, 1933, as compared with 84.0 in November, 1932.

Switzerland: 74.0 in October, 1933, as compared with 75.0 in October, 1932.

France:—99.5 in November, 1933, as compared with 100 in November 1932 (base: 1932=100).

(International Labour Office, Jan. 27, 1934).

THE ROOSEVELT POLICY

"MONARCHY OR MONEY POWER"

BY. R McNAIR WILSON

President Roosevelt stands fifth in a succession of statesmen who have seriously challenged the power of money during the period of modern history. The list comprises Charles I of England, George III of England, Louis XVI of France and Napoleon I.

In the cases of Charles I and Louis XVI money was the attacker ; monarchy stood on the defensive. And that is true, also, to some extent of the case of George III. Napoleon, on the contrary, attacked a financial system which had become established. President Roosevelt's attack comes after the Money Power has ruled the whole world for a hundred and twenty years,—since 1814.

Money Power is based on the fact that bankers are permitted to lend their personal promises to pay money instead of money itself. They avail themselves of this privilege to the extent that, against every piece of money, ten promises to pay that piece of money are issued by them. So that (since these promises are used everywhere instead of money in the form of cheques) they are able, at their discretion, to add buying-power to any market or to take buying-power out of any market.

This, of course, gives the banking system the power to change the level of prices, seeing that prices rise when markets are full of money (and hence of bidders for goods) and fall when there is little money in the market.

The twin pillars of the banking system are therefore the right to create out of nothing what is in effect money and the right to lend these promises—to pay, or to refrain from lending them, exactly as may seem good.

These two rights become effective through changes in the price level. For producers of goods are always in the unenviable position that, whereas their outgoings (rent, wages, and so on) are fixed and canot be changed immediately, their incomes depend on the day-to-day movements of the market.

If a man can get 1/- for the articles he sells, costs of production which amount to 9d. per article will leave him with a good profit, but if the price of 1/- per article falls to 8d. per article he will be ruined unless he can reduce his wages. Nor will he be able in these circumstances to pay any income tax.

A fall in prices, thererore, leads inevitably to wage reductions, unemployment and bankruptcy both personal and national. During the period of low prices many of the securities deposited with banks in exchange for loans fall into the bankers' hands. Thus the bankers acquire real property in exchange for promises to pay that which, in fact, they do not possess, that is to say, for nothing.

It is obvious that, if it could, every government would resist a fall of prices, the effects of which are bound to be disastrous. But governments cannot replace the promise-money which bankers have withdrawn from the markets. Every government in the world, indeed, is now so situated that its own laws preclude it from issuing any money or even any *promise* to pay money except through the medium of the banking system.

It is against this system that President Roosevelt is now taking the field. Reduced to its simplest terms his "rubber dollar" or "commodity dollar" is only a means of preventing falls (or rises) of the price level. If the commodity dollar is set up nobody will be able to move the prices of goods and consequently farmers and industrialists will be assured, for generations, of a fair price for their goods.

The system favoured by President Roosevelt consists in using what is called the index of the cost of living as the basis of prices. Let us suppose that, on a given day, this index (which is an *average* of the prices of food, light, rent, heating and other items) is declared to be standing at 100, and further that it is declared at the same time that, for the future, one dollar shall be counted as equivalent to 100.

If now, on the following day, prices fall, the index will move down, to say, 90, and one dollar will no longer be equivalent to 100. If the dollar's value is to be restored it will now be necessary to put more money into circulation. When that is done and there is, consequently, more money in the market, the index will rise again to 100. Thus the control of the level of prices will be taken completely out of private hands.

President Roosevelt proposes to accomplish this control by means of a clever use of gold. There may, for example, be, say, ten grains of gold in the dollar when the price index is standing at 100. If the index falls to 90, on the other hand, the dollar will be allowed to contain only nine grains. If the index falls to 80, there will be eight grains in the dollar, and so on. People, therefore, who take dollars out of the market will loose by so doing for their dollars will become worth less and less gold in proportion as the removal of them lowers the level of prices.

The price-index, in other words, is now standing at or about 80, instead of at 100. Consequently the quantity of gold in the dollar is less than it would be if the index stood at 100—in other words, gold is being bought at a high price as measured in dollars. As prices rise, therefore,—and if prices rise—the dollar is likely to become more valuable in terms of gold. That is to say, there will be more grains of gold in each dollar. The *price of gold* in dollars will consequently fall. Thus:

The *price of gold* in dollars will consequently fall. Thus:

Price index	Grains of gold in Dollar.	Prise of 10 grs. of gold.
80	8	1¼ dollar
100	10	1 dollar

The fewer grains of gold the dollar contains, the cheaper will be the "*gold-prices*" of *American goods—for* American wages are paid not in gold but in dollars. Consequently when the dollar contains only 8 grains of gold American manufacturers will be able undersell other countries where *the same amount of money contains more than* 8 *grains.* gold.)

(American wages in other words will in such circumstances contain less gold than wages in other countries and so will be lower, as measured in gold, than wages elsewhere. International prices are measures not in money but in gold.

President Roosevelt's policy is thus enabling his farmers and manufacturers to export their surplus goods. American exports have already risen more than 20 per cent since the gold policy was begun a month ago. Thus a way out of the crisis is opening.

COMPANY REPORTS

JHANZIE TEA ASSOCIATION, LD.

The Association harvested a crop of 3,437,370 lb. during the 1933 season (against 4,026,379 lb. during 1932). Sales to date amount to 1,579,124 lb. (against 1,505,498 lb.), the average price realized being 13.35d. per lb. (against 10.95d.). The Directors point out that the 1933 crop was reduced under the restriction schemes and that the average price obtained was adversely affected as a greatly increased proportion of the teas had to be disposed of on the Calcutta market owing to the smaller proportion allowed to be sold for export.

BRITISH INDIAN TEA CO., LD.

The directors announce that the crop harvested for the 1933 season amounted to 1,195,456 lb. (against 1,409.075 lb. in 1932), and that 655,206 lb. (against 526,566 lb.) have been sold to date at an average price of 12,22d. per lb. (against 9.00d.). They point out that the comparisons have little value owing to the facts that under the restriction schemes the 1933 crop was reduced and that a greatly increased proportion of the teas have had to be disposed of on the Calcutta market as the result of the smaller proportion allowed to be sold for export.

GOHPUR TEA CO., LD.

The following comparative statement of Crop and Sales to date is circulated for the information of Shareholders :—

Final Crop.—1933, 292,063 lb.; 1932, 336,000 lb.

Sales to Date.—1933, 160,751 lb. at As. 12-8; 1932, 209,469 lb. at As. 6-7. Williamson Magor & Co., Managing Agents.

BRITISH DARJEELING TEA CO., LD.

The crops secured for the last three seasons, and the average net prices realized for the quantities sold to mid-December are compared in the following table :—

	1931	1932	1933
Crop (lb.)	519,372	518,000	376,080
Sales (lb.)	304,516	237,454	241,381
Average net price (d.) ...	1s. 2.83	11.35	11.87

Owing to the effects of the severe hailstorms experienced in the early part of the season, followed by attacks of blight, the 1933 crop has fallen short of the quota permissible under the Tea Control Scheme. In these circumstances the directors are again unable to pay an interim dividend.

BISHNAUTH TEA CO., LD.

The following comparative statement of Crop and Sales to date is circulated for the information of Shareholders :—

Final Crop.—1933, Portabghur 784,506 lb., 1932, 878,906 lb.; 1933, Pabhoi 451,820 lb., 1932, 471,440 lb.; 1933, Dikorai 850,400 lb., 1932, 927,680 lb.

Sales to Date.—1933, Pertabghur 303,578 lb. at As. 10, 1932, 387,348 lb. at As. 6-10; 1933, Pabhoi 231,129 lb. at As. 9-10, 1932, 227,924 lb. at Rs. 6-7; 1933, Dikorai 343,230 lb. As. 9-10, 1932, 330,719 lb. at As. 7-9.—Williamson Magon & Co., Secretaries.

EAST INDIA TEA CO., LD.

The following comparative statement of Crop and Sales to date is circulated for the information of Shareholders :—

Final Crop.—1933, 579,622 lbs.; 1932, 671,702 lbs.

Sales to date.—1933, 300,878 lbs. at As. 10-7; 1932. 315,708 lbs. at As. 8-6.—Williamson Magor & Co., Secretaries.

ROHILKUND AND KUMAON RAILWAY CO., LD.

The net earnings for the year to 30th September of the whole system operated by the Company amounted to Rs. 33,82,398 (against Rs. 32,88,079 for 1931-32), of which the company's share was Rs. 15,04,494 (against Rs. 14,79,647). Including miscellaneous income the net receipts for the year in sterling were £122,047 (against £119,767). After providing for income-tax, interest on Debenture and Preference stocks contribution to provident fund, and making other adjustments (including £6,200 on account of Secretary of State's share for surplus profits for the year), the directors recommend a final dividend of 6 per cent. and a bonus of 3 per cent. on the Ordinary stock (subject to tax at 2s. 9d. in the £), making a total distribution of 15 per cent. (unchanged), which will leave £9,106 to be carried forward (against £11,072).

LLOYDS BANK, LD.

The directors announce that after charging rebate and income-tax, provision having been made for all bad and doubtful debts out of the profits of the year, the profit for 1933 available for distribution is £1,438,822 (against £1,550,511 for 1932). To this has to be added £514,746 brought forward, making a total of £1,953,568. The interim dividends paid for the half-year ended 30th June last at the rate of 12 per cent. per annum on the "A" shares (1s. 2⅝d. per share), and at the maximum rate of 5 per cent. per annum on the fully paid "B" shares (6d. per share), absorbed £673,732, leaving a balance of £1,279,836. From this the directors have transferred £100,000 (against £200,000) to the contingencies account, and they have decided to recommend to the shareholders at the ensuing general meeting that dividends be paid for the past half-year on the "A" and "B" shares at the same rates as for the previous half-year, which will leave £506,104 to be carried forward. The total dividend on the "A" shares for 1933 is therefore unchanged at 12 per cent., but it should be noted that last year's distribution comprised an interim dividend of 6⅔ per cent. and a final payment of 5½ per cent.

BARCLAYS BANK, LD.

The directors report that after payment of all charges, full provision having been made for bad and doubtful debts, the net profit for the year ended 31st December was £1,604,680, compared with £1,574,013 for 1932. Adding £577,761 brought forward, £2,182,440 is available, out of which interim dividends totalling £781,101 have been paid. A similar amount will be absorbed by final dividends to be paid on 1st February at the rate of 10 per cent. per annum on "A" shares and 14 per cent. per annum on "B" and "C" shares (unchanged), and, after allotting £50,000 (against nil) to staff widows' fund, the balance carried forward will be £570,238.

UNITED PROVINCES ELECTRIC SUPPLY CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.

WORLD OF INDIAN FINANCE

Calcutta, February 9.

There was comparative ease in the money market during the current week, call money being available at between 2 to 2½ per cent. here and at 1 per cent. for practically the major part of the week in Bombay. This ease is largely attributable to the funds released by gold exports. Also, the natural reaction in the gilt-edge market which set in after the hectic rise in the price of Paper in the earlier part of the week is a contributory cause to the tone of the money market. The treasury bill operations of the Government resulted in the market getting a small surplus to its advantage. The chief cause of easy money was however the large purchases of sterling effected by Government. At close of business to-day there were lenders over borrowers at 2½ per cent., and during the week, it is reported, Union rate for three months' money was reduced from 1¾ to 1½ per cent.

The rise in 3½ per cent. paper which began at the close of last week was maintained (Paper touched Rs. 85/14 on Tuesday) till the middle of the week, when as a result of quiet advices from London, coupled with profit-taking, prices began to sag. The closing quotation this evening Rs. 85/2. The quietness in the tone of 3½ per cent. paper is reflected in the prices marked for other securities. As was pointed out in these columns on an earlier occasion, such a reaction was bound to occur. During the mid-week it was not only gilt-edge that was buoyant ; jute was quoted at 31/8 on Tuesday last, a rise of 12 annas on last Friday's quotation. As in the case of the securities market, there has been an ease in the commodities market as well towards the close of the week.

The ease in the money conditions is further reflected in the improvement shown in the average rate of acceptances at the last treasury bill auction. The drop from Rs. 2-1-2 in the earlier week to Rs. 1-15-0 in the current week is consistent with the steady improvement maintained during the past few weeks. The shrinkage in the total volume of tenders in the current week should, however, be attributed to the demand for money for financing security purchases and gold exports. The continuance of the weekly offer for the next auction at Rs. 1½ crores is, however, difficult to understand. The statement of affairs of the Imperial Bank of India for the week ending the 2nd February discloses an increase in the ways and means advances to the Government of India from Rs. 1 crore on the previous Friday to Rs. 4½ crores on that day. Having regard to the usual month-beginning outgoings on account of ordinary payments and taking into consideration the large-scale purchases of sterling intermediates which Government have been making, it is somewhat difficult to understand why Government are relying so much on the Imperial Bank of India for their ways and means accommodation. It is obvious that these ways and means advances should be repaid at some time or other and if Government can borrow, as they are borrowing, at round about 2 per cent., it would appear far more desirable to borrow from the market rather than from the Imperial Bank of India. Ways and means advances are designed to enable Government to tide over temporary difficulties. To keep them going on from week to week for a long time would be transgressing their legitimate purpose. The psychological effect of an increase in the amount offered for tender is to render the tender rates adverse to Government but this is a contingency which has got to be faced ; and the market knows, as well as Government, what the commitments of Government are in this regard. With the very large sterling purchases which Government are making—and it is not necessary certainly that they should be bound by the illustrative figure for remittances which they adopt for their budget purposes—and taking into consideration the appreciable amount of treasury bill maturities before the end of the year, there can be no doubt that Government will have to come to the market for financing their sterling purchases partly, if not in whole, by borrowing in the form of treasury bills.

It has been suggested in these columns on an earlier occasion that one method by which Government could meet a situation like this would be by expanding currency in India against their sterling resources in England. As, however, the strength of exchange is largely due to the gold position, it would be inexpedient at this juncture to resort to this course, because when gold exports begin to slow down, the chief prop of exchange would disappear and an expansion of currency might accentuate the weakness in the rupee rate. All things considered, it would, therefore, be best to rely upon treasury bills. In view of the large treasury bill maturities before the end of the year, it would appear to be insufficient merely to raise the weekly offer to 2 or even 2½ crores and there is no reason why Government should not re-introduce intermediates almost immediately together with raising their weekly offer.

Exchange has continued firm during the week at 1-6 1/16 and the weekly offer at the last sterling auction reached the record figure of £52 millions, of which a paltry £10,000 was at the higher rate. Since the beginning of the current calendar year Government appear to have purchased up to the week ending the 3rd February 9.7 millions. Allowing £1 million for each of the weekly auctions during this period, it is obvious that they have purchased nearly £4¾ millions in the shape of intermediates, which, according to the existing practice, is 1/32 above the tender rate. It is, of course, apparent that the raising of the weekly offer from £1 million (notwithstanding the colossal tenders made) would be disadvantageous to Government because to the extent they raise the weekly offer they would be foregoing sterling intermediates at the higher rate they are now purchasing. The market, however, is quite satisfied with tendering at 1-6 1/16d. and unless a sudden demand intervenes there seems very little likelihood of a change both in the policy followed by Government and the practice adhered to by the market.

Exchange was quiet with business done at 1s. 6 1/16d. and buyers over.

The closing rates are : 1s. 6 1/16d. T.T. up to March 15; 1s. 6 1/32d. T.T. up to April; 1s. 6d. May-June T.T. and 1s. 5 31/32d. July-December T.T.

Bills may be quoted: 1s. 6 3/16d. February; 1s. 6 5/32d. March-April; 1s. 6 1/8d. May-June and 1s. 6 3/32d. July-December.

Money rates are practically unchanged with call money quoting at 2½ per cent. One month, two month and three months deposits may be quoted 1¼ per cent., 1¼ per cent. and 1½ per cent. respectively.

(Continued from page 287)

The action of France in respect of protection needed for her gold reserves may well be called the major uncertainty of international finance to-day. The reports of the state of opinion in French financial circles and amongst Government ranks are generally meagre and always unilluminating. It would hardly suffice to say that the general opinion in French official circles is that, as a result of Mr. Roosevelt's proclamation, America has signified her desire to come into line with the gold standard countries. Equally unhelpful is the affirmation that France has no fear for the franc, that the franc is intrinsically sound and that, provided the budgetary and trade stability is assured the franc can well maintain itself in the face of the depreciation of currencies in all the rest of the world. What is required is some measure of insight into the measures that the Bank of France might take to protect its gold reserves. And in this regard, no light has yet been afforded. And what is more, gold movements have been more violent and chaotic during the past week than ever before in the history of international finance. The latest improvements in transportation have been utilised to throw the reserve mechanism of central banks nearly out of gear. There was a great gold rush by air to Croydon from the Continent.

The first to land the treasure was a Dutch machine from Rotterdam, which brought over 34 boxes of the precious metal valued at £400,000 addressed to a London Bank. Others followed in quick succession, including five French liners with over 10,000 lbs. each, another Dutch liner from Amsterdam with 2,800 lbs. and the Imperial Air-ways liner on the regular service with a ton.

Three more Imperial Airways liners subsequently arrived from Paris with gold, making the total landed at Croydon by air to-day nearly 15 tons.

One Amesterdam machine, after unloading the cargo, underwent quick overhauling prior to returning to Paris in the hope of bringing over another cargo the same night. Flying conditions are very hazy and planes are being guided to the aerodromes by almost constant firing of rockets.

Another week has passed without any mitigation of the uncertainties of international exchanges. In a background, rendered confusing by large scale movements of gold from one country to another and the shooting up of the sterling price of gold, reports and contradictions of negotiations between Great Britain and France still continue to be circulated by news agencies. It is yet difficult to pick one unbroken thread in this tangle. The basic factors of the present situation are America's anxiety to take down the dollar to well over 5 dollars, Britain's unpreparedness for such a high exchange value for sterling and France's repeated assurance that she does not intend to go off the gold standard. If, contrary to the expectations of a week ago, the international situation fails to clear up and eventuate in some sort of agreement amongst the three nations, the history of the international exchanges during the coming weeks will be the history of the attempt on the part of each country to ascertain how far the immediate objective indicated above for each of them is practicable.

So far as America is concerned, it is stated, with a degree of certainty that is becoming increasingly unusual in news reports to-day, that because the devalued dollar is not fulfilling the prospects of its sponsors the United States is preparing to launch operation of the stabilisation fund. According to this message, officials confidently predict rates of 5.10 dollars to the sterling and 6.63 dollars to 100 francs. Though since the announcement of this message the sterling dollar cross rate has gone up slightly above the 5 dollar level, the question whether the American Exchange Equalisation Fund has set about its task of maintaining the cross rate at or near about 5.10 is of immense interest from the standpoint of the future. That British authorities are not prepared to view such a high cross rate with equanimity may well be taken for granted. In that case, would the American fund readily launch out hostilites against the British fund? It would seem that, if and when the American authorities set about raising and maintaining the cross rate, they would find that a new impediment has arisen in their path in the shape of a flight to the dollar. It seems strange that the fixation of an upper limit on revaluation at 60 per cent. with the lower limit of 50 per cent. unaltered should have had the effect of coaxing refugee funds from America back to the old country. This only shows that the holders of such funds had entertained fears of an even more drastic devaluation of the dollar than was provided in the Thomas Amendment.

Whatever might that be, there can be no doubt that such return of funds is already well on the way. Formerly, when America set about making its gold price effective, all that she had to do was to sell small amounts of dollars in London or Paris. For they were helped in no small measure by the public, which already had fear of devaluation of the dollar and was prepared, not only to take the acts of the Administration at their face value, but even to exaggerate them. So that every time there was evidence of official intervention in the markets the effect was even more than what the authorities could have desired. But at the present moment not only is there a general repatriation of capital but conditions in Wall Street are such as to encourage a new interest in European investors. Hitherto it had been solely a case of American funds finding their way back to their homes. But if, on the other hand, Wall Street should begin to attract funds from abroad, the resources that Mr. Roosevelt had now kept at the disposal of Exchange Fund would be found to be utterly inadequate to the task of stemming the tide that raises the cross rate.

Writing at the beginning of the week, the City Editor of the London *Times* pointed out that the action of President Roosevelt had caused two strongly opposite movements namely, the rush to buy gold in the cheaper markets of Europe and to sell it in the dearer market of America and on the other hand, a rush to buy dollars and dollar securities. The first movement obviously tends to reduce the value of the dollar while the other operates to raise it. The second movement has been more powerful in its influence than the first, despite plans for very large shipments of gold to America. The City Editor thinks that there is at present no sign of the American exchange fund being brought into operation for the purpose of buying francs and sterling to the point of eliminating the premium of the dollar over the gold franc, which, so long as it remains, will induce gold shipments to the United States. It has also been reported by the Washington Correspondent of the London *Times* that complete silence will henceforth be the rule of the Administration. Where currency questions are concerned, though little attempt is made to deny that the first effect of the new gold price and the devaluation of the dollar in foreign countries had not been very satisfactory, one wonders whether this rule of silence and the absence of signs, that the exchange equalisation fund has been brought into play, really indicate a recognition on the part of the American Administration of the tremendous forces that might be brought into play against them, once the fund is used actively and vigorously to take the exchange value of the dollar to still lower depths.

As for Britain, she still continues on the comfortable position in which forces set afoot in America and on the continent nearly balance themselves, leaving her unaffected. There can be no doubt that, but for the phenomenon of the repatriation of refugee funds back to America and the possibility of European interests in Wall Street, the American equalisation fund would have begun to function briskly and Great Britain faced with the possibility of a disquieting overvaluation of sterling.

The bank chairmen's speeches during Air Mail week point to a comparative absence of flutter amongst bankers at the prospect of further rise in the cross rate. Mr. Paton, Chairman of the Martin's Bank, went so far as to suggest that, in as much as the fall in the gold value of the dollar had done no appreciable harm to British trade during 1933, Britain had to affect the attitude of indifference to what Mr. Roosevelt might do in the future. But the*Financial News* has afforded a timely corrective; and while it recognises that with the assurance of an immediate expansion in the total volume of world trade Britain might be prepared to pay a price for the stabilisation of the international exchanges, she could not regard with equanimity the prospect of the cross rate going up at the bidding of Mr. Roosevelt. That is, there is a lively sense of the danger to British industry involved in allowing the dollar to go down still further and also a confidence in the capacity of the British Exchange Fund to engage in a possible currency war more successfully and with better technique than the American Fund can. But it is safe to say that the world can expect no indication of British policy, so long as it is not clear what America would be prepared to do in pursuance of the policy hitherto outlined and how exactly France would react to the large scale withdrawal of gold that are already well underway.

NATIONAL INSURANCE CO., LTD.
7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, Feb. 8.

Trading in the Stock Exchange was not so brisk during the period under review, as was evidenced during the past week. Both Government securities and jute mill shares, which were the outstanding features during the previous week, have reacted to some extent. Cotton mill shares, on the other hand, have shown slight improvement. Coals remained dull and practically neglected.

Among miscellaneous industrials, sugar mill shares were again easier while the recent activity in Engineering group has been fully mainatined. Although the total turnover in tea shares, was limited, the undertone continued fully firm.

Government Securities

The feverish activity which was manifested in the gilt-edge section during the last week has been arrested and a reaction has followed, presumably due to profit-taking. Owing to speculative buying, added to a certain amount of investment enquiry, 3½ per cent. Government Paper touched Rs. 86 at one time during the last week, but again gradually fell away, and at the time of writing, are quoted at Rs. 85-3.

4 per cent. loan 1960-70 which advanced to Rs. 100-4, are now quoted at Rs. 99-14. 5 per cent. loan 1945-55, however, kept fairly steady about Rs. 114-8. Among medium-dated issues 5 per cent. loan 1939-44 have maintained its improvement at Rs. 106-13. 3½ per cent. loan 1947-50 were dealt in at Rs. 95-11. The Bank rate remained unchanged at 3½ per cent.

Although a reaction may take place from time to time still higher prices are likely in Government securities in view of the increasingly easier money conditions and yields in Treasury Bills showing further contractions.

Fixed Interest bearing securities

Jute Mills Preference shares were again well supported and accounted for a fair turnover. Among cotton mills preference, Dunbar (20 per cent. preference) were dealt in at Rs. 134, Kesoram (7 per cent. preference) at Rs. 107 and New Victoria (6 per cent. preference) at Rs. 4-2. Among tea, Namburnadi (10 per cent. preference) issues improved further to Rs. 14-4. Among Industrial Preferences, Bengal Telephone (7 per cent.) issues were a shade higher at Rs. 14-4, while Burn & Co. (6 per cent.) preference remained fully firm at Rs. 97-8. Indian Standard Wagon preference accounted for a deal at Rs. 110-8. There were buyers of several coal preferences, such as, Bengal, Nagpur and Equitable, but no business was reported owing to absence of sales.

In sympathy with the improvement in the prices of government securities, Calcutta Port Trust Debentures were marked up slightly, although only a very limited business was put through. Among Jute Mills Debentures, business was reported in 5½ per cent. 1914-34, Fort Gloster Jute at Rs. 100-8 and 7 per cent. 1922-52. Nuddea Jute was dealt in at Rs. 110-8. Among miscellaneous issues only a small lot of 5 per cent. 1920-45 Sijuah-Jherriah changed hands at Rs. 86-8.

Other Investment Stocks

Imperial Bank's Shares show no change in the week. The fully paid up issues are now quoted at Rs. 1,222-8 and Contributories at Rs. 306. No business was reported in other bank's shares.

More activity was witnessed in the Light Railway section and enquiry for Government guaranteed shares continued. Arrah-Sasaram and Baraset-Basirhat, on the other hand, were on offer.

Cotton

The undertone in this section shows some improvement although the turnover was small. Bengal Nagpur (ordinary) improved to Rs. 18. Kesoram (ordinary) which was on offer at Rs. 3-2 for some time past actually changed hands at Rs. 3-6 at the close. Muir Mills (ordinary) were dealt in at Rs. 255 and New Victoria (ordinary) at Rs. 1-2. Dunbar (ordinary) was quoted at Rs. 110 towards the close.

Coals

Interest in this section, it appears, has almost entirely evaporated and the total turnover represents an absolute minimum. With the exception of Raneegunge which kept remarkably steady round about Rs. 41-4, prices of almost all other shares sagged considerably. Amalgamated are now quoted at Rs. 13-12, Bengal eased off to Rs. 228, Burrakur (ordinary), however, kept steady at the decline at Rs. 13-2. Equitable (ordinary) was dealt in at Rs. 19-4 and Bokaro and Ramgur at Rs. 7-8. Katras Jherriah was quoted at Rs. 29-2 and Nazira at Rs. 7-8. Among lower priced stocks Burra Dhemo was quoted at Rs. 4-1 and Talcher at Rs. 1-12.

Latest reports from the coal fields indicate that business during the week has been comparatively quiet with little demand except for small coals.

Jute

The activity manifested in this section during the past week, has not been maintained during the week under review. Commodity market eased off considerably and this was reflected in share values. Nine porters hessians, which advanced to Rs. 10-3, during the past week, owing to North America taking some interest, eased off to Rs. 9-15 at the time of writing. Raw jute market was also very unsettled and a quieter tone prevailed due to dullness of demand. Howrahs opened firm at Rs. 53-12 on Monday and advanced to Rs. 54-6 and a heavy turnover was recorded. Kamarhatty also moved up from Rs. 556 to Rs. 566. From Tuesday onwards a reaction set in and rates sagged considerably. Howrahs at the time of writing are quoted at Rs. 53-7 and Kamarhattys at Rs. 560. The undertone, however, remained very steady.

Among other Rs. 10 denominations, Clives were dealt with up to Rs. 27-6, but now eased off to Rs. 27. Hukumchands were quoted at Rs. 10-10. Nationals receeded to Rs. 22-12 from Rs. 23-4 and Presidencies changed hands at Rs. 5-8.

Higher priced stocks also eased off slightly. Albions are now quoted at Rs. 253. Alliances which were dealt in up to Rs. 334 receded to Rs. 326. Anglo-Indians are now quoted at Rs. 354 against Rs. 357. Ballys, however, kept steady at round about Rs. 160 and Barnagores at Rs. 145. Belvederes were marked at Rs. 362. Budge-Budges at Rs. 325, Cheviots at Rs. 221, Dalhousies at Rs. 355, Deltas at Rs. 355, Gourepores at Rs. 368, Kanknarrahs at Rs. 472, Lawrence at Rs. 462, New Centrals at Rs. 365, Orients at Rs. 208, Standards at Rs. 320 and Unions at Rs. 435.

Electricals

Public utility company shares have come in for more attention and a fair amount of business was reported. Bengal Telephone (ordinary) was better at Rs. 14-4. Bareilly Electrics changed hands at Rs. 11-4, Jubbulpore Electrics at Rs. 10-4, Rawalpindi at Rs. 18-6 and United Provinces at Rs. 123 dividend.

Engineering

The activity, which was in evidence in this section recently, has continued unabated and a fairly large business was put through. Arthur Butler were dealt in at Rs. 6 and there were buyers at this rate. Britania Building and Iron advanced to Rs. 4-4 *from a quotation of Rs. 2-8,* owing to persistent demand. Bengal Iron kept very steady at Rs. 4-8 on account of London advices. Indian Iron & Steel were steady at last level and Kumardhubi Engineering at Rs. 2-8. Indian Galvanizing were quoted at Rs. 8-4, Britania Engineering at Rs. 1-6 and Marshalls at Rs. 1-1. Burn & Co. (ordinary) were unchanged at Rs. 195.

Sugars

This section was again irregular and comparatively less business was reported. Samastipore Central again eased off to Rs. 7-12, Champaran were quiet at Rs. 19 and Ryam at Rs. 29-8. Cawnpore (ordinary) eased off to Rs. 29.8 while Carew have met with some support round Rs. 16-14. Balarampur remained unchanged at Rs. 11.

Miscellaneous

Shipping section kept fairly steady. Calcutta Landing and Shipping were quoted at Rs. 8-14, India General Navigation (ordinary) at Rs. 77 and Port Shipping at Rs. 12-12. Bararee Coke were quoted at Rs. 9-8 and Burma Corporation at Rs. 9. Britania Biscuits were marked up to Rs. 4-14. Indian Wood Products kept steady at Rs. 29-12 less dividend, British Ceylon Corporation at Rs. 6-8 and Howrah oil at Rs. 7. Tide Water Oil were marked at Rs. 8. A fair business was reported in rubber shares at hardening rates.

Tea

Although some irregularity was seen in the last sale for Tea for 'export rights', an excited demand was noticed for tea for internal consumption and rates advanced up to one anna. Dusts met with a strong demand and quoted up to 9 annas. In the Stock Exchange although trading in tea shares were on a limited scale and enquiry has not been broadened, the undertone kept very steady and rates in the majority of cases have been maintained. Speculative issues however met with more sellers due to profit-taking but the demand for purely investment stocks was satisfactory. Birpara have maintained its rate at Rs. 880 and Ledo improved to Rs. 228 on dividend prospects. Bishnauth on the other hand, receded to Rs. 29, East India to Rs. 14-12 and Rutmato Rs. 9-14, Roopachera and Gohpur had several buyers while Betjan, Dhelakhat, Tengpani and Tumsong were on offer.

JUTE AND JUTE GOODS

JUTE

Further weakness was noticeable in the raw jute market during the current week. This has been partly due to the selling pressure from second-hands and also due to blanks by a big speculator. Trade also has shown a pausing tendency in the meantime and the mills' specially are not willing to negotiate business at last rates. There are no doubt buyers but only at lower prices. Values in May futures have consequently come down. The highest and lowest quotations for the week were Rs. 32 and Rs. 30-4 respectively.

There has not been any appreciable business with the shippers nor with the mills. There are sellers of ready Firsts at Rs. 27-8. In London market there has been fair business at declining rates but the buyers seem to have been satisfied at the moment. The Indian mills have remained very apathetic. There are sellers of Indian Jat LR and XLR at Rs. 4-8 and Rs. 4 per maund without getting buyers. Upcountry markets are still steady, sellers holding for higher prices. But the recent rise in values have fully reflected in the arrivals which are showing improvement. Technical position is not unsound long liquidation having further taken place during the current week. This is so far the futures are concerned. But holdings of spot goods are still very heavy and as reported last week unless they are cleared the selling pressure at every rise will make itself felt.

The rise in other commodity markets such as cotton and hessians could not help the raw jute in maintaining its rise. Should a reactionary trend take place in these commodities further liquidation by long holders will be forced upon the market and may cause a further decline in values.

The undertone of the hessians markets is steady but the market at the moment seems heavy and if nothing unexpected happens a reaction may set in Heavy goods markets which is far from healthy the only consideration being the fact that the same did not rise in proportion to hessians and consequently even if it falls the fall will not be heavy.

JUTE MANUFACTURES

Early in the week very steady conditions prevailed in the hessians market but later on a comparatively easier tone has prevailed. Ready nine porters was dealt in at little over Rs. 10 the quotations at the time of writing being 2 annas lower.

The steadiness in the market was due to the good enquiry from U.S.A. following the stabilisation of dollar at lower gold value. The American cotton and stocks markets showed considerable strength and naturally had a healthy effect on other markets. In the meantime large business has resulted between the local mills and the bazar and thus the sales that were affected outside India has been bought back by the bazar from the mills. Thus the market is bull and long and if fresh business is not forthcoming in the course of next few days the bulls will have to liquidate their holdings and may thus cause a decline in values. At the moment the market seems to be heavy and therefore it is good to take profits.

The heavy goods market however did not show the same improvement as that of hessians. During the middle of the week fair business was done and the section was fully steady. But the statisfical position of the heavy goods being far from satisfactory the strength could not be long maintained. Once the buyers were satisfied the market began to sag under selling pressure. The position of the market is not very heavy but in case hessian shows weakness the same will be naturally reflected in heavy goods too .

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From our correspondent)

Bombay, February 8, 1934.

Under the joint impetus of rise in gold rates and better prospects of passage of Bankhead's ginning control Bill, cotton prices in America have come up from 11.55 to 12.03 after touching 12.17 (New York May Option). Liverpool rates have also improved by about 30 points. In the local market covering by short sellers and option dealers have caused sharp advance, closing rates of Broach April-May, Oomra March and Bengal March to-day being quoted at 213, 188 and 145-4 respectively.

The hesitating tone of the market that was in evidence during the past week has been over and after a reactionary market, values of Cotton have shown a decided improvement. Broach April/May has gone up to Rs. 215 and July/August to Rs. 221. New York Cotton is quoting at 12.30 cents for July or a rise of about 90 points. Liverpool Cotton has likewise shown an improvement of about 50 points January quotations being at 6.35.

The rise has been due to a healthy undertone in American markets. The long liquidation that was noticeable during the previous week was well absorbed. Although there seems to be doubt about the passage of Bank-head Bill yet the general feeling has been that some sort of successful crop curtailing move will be taken in America and that all efforts will be made to raise commodity prices in general.

Indian Cotton which was cheaper in parity was bound to improve. Following better American advices and Japanese buying there has been a general buying in the market and values have consequently improved.

GOLD

(By Wire)

(From Our Correspondent)

Bombay, Feb. 8.

Gold.—Following the new development of Roosevelt's gold policy sensational rise in gold prices was witnessed everywhere. Local gold rate which had closed at Rs. 32-12 on Wednesday, 31st January, touched Rs. 35-2 on Thursday mid-night. Excitement thereafter subsided though the rate continued firm till Monday night when it closed at Rs. 34-8 while London Ready gold touched record price of £7. Since then prices have weakened, London gold rate yesterday being fixed at 6-16-6 and local price after having declined to 33-11 was being unquoted this evening at 33-14-3. Gold price has now lost touch with the franc rate being based upon the supply and demand and sterling-dollar rate. Franc rate is now between 79.87 and 77.62 being quoted in opening stages to-day at 78.06.

Very steady conditions prevailed in this market and business was done at just below Rs. 35 per tola. The rise was due to the proclamation made by President Roosevelt fixing the price of gold at 35 dollars per ounce and purchasing the same at this rate in the various markets. Following this announcement there was a feverish activity in the market and the volume of business both inter-bazar and for export was pretty heavy. The price of gold in India recorded in the course of this week was highest since England went off the gold standard in 1931.

Exports have again been on an increasing scale and the shipment per S. S. Naldera alone amounted to worth Rs. 1½ crores. The total exports since England went off gold standard have been over Rs. 162 crores. Stocks in Bombay have considerably fallen, the same being estimated at 3 to 4 lakhs tolas as against 10 lakhs tolas a few weeks ago. Arrivals from upcountry are again very heavy demand for home consumption being very poor.

London price of gold had gone up to s. 140 during the week, the closing being slightly easy at s. 136 6d. Sovereigns which had gone up to Rs. 21-12 are now quoting at Rs. 21-9.

Gold reserve against notes of the Bank of England was £190,817,659 on the 17th ultimo showing no change from the previous Wednesday's figure.

In the open market, exceptionally large supplies were available and due to the usual keenness of demand, the price included a substantial premium over the franc parity. The buying was concentrated, the United States of America being the destination for most of the offerings.

There was no remarkable steadiness in price, the variation being only 2d. pe rounce though about £5,500,000 changed hands.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 15th ult. to mid-day on the 22nd ult.:—

Imports

SILVER

(By Wire)

(From Our Correspondent)

Bombay, Feb. 8, 1934.

Silver.—Rates have been steadier in sympathy with rise in gold prices and on hopes that Roosevelt will soon take silver into consideration. London spot rate came up from 19 5/16 to 19 15/16 and is fixed to-day at 19¾. New York ready has improved from 43.58 to 44½ cents by yesterday. Shanghai T. T. on London has advanced from 1s. 4⅛d. to 1s. 4 15/16d. The local rate for ready has risen from 54-8 to 55-12 this evening touching the highest at 56-4.

Steadier conditions have prevailed in the market. The rise was mainly due to bear covering and in sympathy with the rise in gold. The local price of silver being far too below the import parity the bullish news always makes the bears nervous and hasty cover is the inevitable result.

It was expected that there would be some announcement by President Roosevelt regarding the coinage of silver or holding silver against notes as cover but the same has not been so far materialised and consequently the market could not be maintained at higher levels. The highest and lowest price in the local market was Rs. 56-4 and Rs. 54-10. Stocks in Bombay are lower than the past week the same being estimated at about 7/8 thousand bars. The daily offtake also is better at about 40/50 bars.

ADVERTISEMENTS IN CARRIAGES

ON

The Madras Suburban Electric Trains.

A limited number of advertisements will be accepted for display on the panels inside the coaches at specially reduced rates shown below:—

11" × 11" ... Rs. 6 per annum for each.
11" × 24" ... Rs. 12 ,, ,,
11" × 36" .. Rs. 18 ,, ,,

SOUTH INDIAN RAILWAY CO., LD.
(Incorporated in England)

London silver had touched 20d. closing easy at 19 5/8d. India bought at the decline while China operated both ways. Shanghai dollar has ruled near 1s. 4¼d. The low parity of silver in India has caused further exports of silver amounting to about 900 bars from Bombay.

Following the appreciation of the dollar and the consequent demand from that quarter, the market improved. Speculative buying was also noticeable sellers hesitating. On the 19th ult. prices reached 19 3/4d. for cash and 19 13/16d. for two months.

But this improvement was not maintained for long as there was no response from the Far Eastern Exchanges. Besides this there was considerable sales on China account. Hence prices eased down. Continent sold and some re-sales by Indian bazars were also effected. There was consistent support from America and maintenance of prices depends upon this factor.

TEA

Sale No. 32 was held on 5th and 6th February when 10,000 packages of tea with export rights and about the same quantity of leaf and dust for internal consumption were offered for sale. The average price realised was annas 0-11-2, 0-6-7 and 0-9-2 per lb.

The quantity offered this week was smaller than the previous week and the quality also was inferior. Values consequently showed a decline from one anna to half an anna per lb. The quantity offered for internal consumption was however large and a full activity was noticeable. Values were firm to dearer. Fannings were the strongest feature of the week, an advance of full one and a half annas being recorded. Dusts also continued very strong being 6 to 9 pies dearer. Good clean type fetched annas 0-9-3 to 0-9-6 per lb.

The feeling in the London market has been that the recent rise in tea is overdone and that should it continue further it will have an adverse effect on the consumption of tea.

The following are the full particulars of sale No. 32:—

Teas with Export Rights

	1934	1933	1932

TEA SALES

February 5.

At the London auctions on 25,700 packages of Indian tea were submitted for sale.

There was a good demand with prices generally firm for common qualities. Fannings showed some irregularity.

The following were the lowest prices fetched during the days's auction:—

Common Pekoe last auction 13d., to-day's auction 13d. lb.; Common Broken Pekoe last auction 13¼d., to-day's auction 13d. lb.; Common Orange Pekoe last auction 13½d., to-day's auction 12¾d. lb.; Common Broken Orange Pekoe last auction 13¼d., to-day's auction 13¼d. lb.; Common Broken Pekoe Souchong last auction 13¼d., to-day's auction 13¼d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 13⅜d., to-day's auction 13⅜d. lb.; Clean Common Broken Pekoe last auction 13⅜d., to-day's auction 13⅜d. lb; Clean Common Orange Pekoe last auction 13¾d., to-day's auction 13¾d. lb.; Clean Common Broken Orange Pekoe last auction 13¾d., to-day's auction 13¾d. lb.; Clean Common Broken Pekoe Souchong last auction 13¼d., to-day's auction 13¼d. lb.

CEYLON TEA SALES.

At the London auction on February 6, 16,400 packages of Ceylon tea were submitted for sale.

There was a quiter demand with prices irregular and easier, except for inferior grades, which were about steady.

The following the day's auction:—

Common Pekoe last auction 13¾d., to-day's auction 13¼d. lb.; Common Broken Pekoe last auction 13½d., to-day's auction 13½d. lb.; Common Orange Pekoe last auction 14¼d., to-day's auction 13¾d. lb.; Common Broken Orange Pekoe last auction 14d., to-day's auction 14¼d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 14d., to-day's auction 14d. lb.; Clean Common Broken Pekoe last auction 14d., to-day's auction 13⅞d. lb.; Clean Common Orange Pekoe last auction 14⅜d., to-day's auction 14⅝d. lb.; Clean Common Broken Orange Pekoe last auction 14⅝d., to-day's auction 14⅝d. lb.

GRAINS AND SEEDS

WHEAT

The market during the period under review has ruled steady but quiet values having been fully well maintained at an advance. The rise has been caused generally due to the cold spell and the consequent damage caused to the crop in U. P. and Punjab. At the same time the ready stocks in Calcutta are also low and the demand for the same is better. The first wheat forecast shows an increament of seven per cent. in area but the fact was well discounted in the market and had practically no weakening effect.

WHEAT FORECAST

The first All-India wheat forecast, 1933-34, published yesterday, shows that the total area sown is estimated at 34,053,000 acres, as against 31,831,000 acres (revised) at this time last year, showing an increase of 7 per cent.

Climatic conditions at the sowing time were, on the whole, favourable, and the present condition of the crop is reported to be good. More rain is, however, badly needed.

LINSEED

The market has ruled very steady. It has been due to the healthy sentiment in U. S. A. and local troubles in South America. The damage to the standing crop in India has also been responsible for the strength in the local market. The actual business resulting at higher levels is however small and top values are not likely to be maintained.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, February 8, 1934.

Securities.—Gilt-edged securities ruled very firm. 3½ per cent. Government Paper from its last close of Rs. 84 opened at Rs. 84-6 and closed at Rs. 85-1 on Friday, touched Rs. 85-9 on Saturday and rose as high as Rs. 86 on Monday. This strength was attributable to the spectacular rise in gold prices following the latest development of Roosevelt's policy on January 31. Later, however, on London advices, prices sagged in absence of support. Numerous sharp fluctuations, however, were witnessed, Calcutta operators taking a leading part. Eventually the day closed at Rs. 85-5-6. Other issues were steady with a firm tendency.

Shares.—On Friday mere *budhle* transactions were being carried out. But from Saturday onward the Stock Exchange reflected strength in local securities, gold and cotton. On Saturday aggressive buying in Andhra Valley ordinaries set the ball rolling. The rise was alround, even textile mill shares evincing a firm tone. Only Bombay Dyeings, which are more or less cornered, remained quiescent. On Monday, Power shares were a bit quieter, but cement group firmed up. On Tuesday, perturbing news from France and the easiness in securities affected shares. Wednesday and Thursday sessions were rather dull. Rates of important scrips are tabulated below:—

	Close on 1st Feb. 1934	Highest	Lowest	Close Today

At the London auctions on 25,700 packages of Indian tea were submitted for sale.

There was a good demand with prices generally firm for common qualities. Fannings showed some irregularity.

The following were the lowest prices fetched during the days's auction:—

Common Pekoe last auction 13d., to-day's auction 13d. lb.; Common Broken Pekoe last auction 13¼d., to-day's auction 13d. lb.; Common Orange Pekoe last auction 13½d., to-day's auction 12¾d. lb.; Common Broken Orange Pekoe last auction 13¼d., to-day's auction 13¼d. lb.; Common Broken Pekoe Souchong last auction 13¼d., to-day's auction 13¼d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 13⅜d., to-day's auction 13⅜d. lb.; Clean Common Broken Pekoe last auction 13⅜d., to-day's auction 13⅜d. lb; Clean Common Orange Pekoe last auction 13¾d., to-day's auction 13¾d. lb.; Clean Common Broken Orange Pekoe last auction 13¾d., to-day's auction 13¾d. lb.; Clean Common Broken Pekoe Souchong last auction 13¼d., to-day's auction 13¼d. lb.

CEYLON TEA SALES

At the London auction on February 6, 16,400 packages of Ceylon tea were submitted for sale.

There was a quiter demand with prices irregular and easier, except for inferior grades, which were about steady.

The following the day's auction:—

Common Pekoe last auction 13¾d., to-day's auction 13¼d. lb.; Common Broken Pekoe last auction 13½d., to-day's auction 13½d. lb.; Common Orange Pekoe last auction 14¼d., to-day's auction 13¾d. lb.; Common Broken Orange Pekoe last auction 14d., to-day's auction 14¼d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 14d., to-day's auction 14d. lb.; Clean Common Broken Pekoe last auction 14d., to-day's auction 13⅞d. lb.; Clean Common Orange Pekoe last auction 14⅜d., to-day's auction 14⅜d. lb.; Clean Common Broken Orange Pekoe last auction 14⅜d., to-day's auction 14⅝d. lb.

GRAINS AND SEEDS

WHEAT

The market during the period under review has ruled steady but quiet values having been fully well maintained at an advance. The rise has been caused generally due to the cold spell and the consequent damage caused to the crop in U. P. and Punjab. At the same time the ready stocks in Calcutta are also low and the demand for the same is better. The first wheat forecast shows an increament of seven per cent. in area but the fact was well discounted in the market and had practically no weakening effect.

WHEAT FORECAST

The first All-India wheat forecast, 1933-34, published yesterday, shows that the total area sown is estimated at 34,053,000 acres, as against 31,831,000 acres (revised) at this time last year, showing an increase of 7 per cent.

Climatic conditions at the sowing time were, on the whole, favourable, and the present condition of the crop is reported to be good. More rain is, however, badly needed.

LINSEED

The market has ruled very steady. It has been due to the healthy sentiment in U. S. A. and local troubles in South America. The damage to the standing crop in India has also been responsible for the strength in the local market. The actual business resulting at higher levels is however small and top values are not likely to be maintained.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, February 8, 1934.

Securities.—Gilt-edged securities ruled very firm. 3½ per cent. Government Paper from its last close of Rs. 84 opened at Rs. 84-6 and closed at Rs. 85-1 on Friday, touched Rs. 85-9 on Saturday and rose as high as Rs. 86 on Monday. This strength was attributable to the spectacular rise in gold prices following the latest development of Roosevelt's policy on January 31. Later, however, on London advices, prices sagged in absence of support. Numerous sharp fluctuations, however, were witnessed, Calcutta operators taking a leading part. Eventually the day closed at Rs. 85-5-6. Other issues were steady with a firm tendency.

Shares.—On Friday mere *budhle* transactions were being carried out. But from Saturday onward the Stock Exchange reflected strength in local securities, gold and cotton. On Saturday aggressive buying in Andhra Valley ordinaries set the ball rolling. The rise was alround, even textile mill shares evincing a firm tone. Only Bombay Dyeings, which are more or less cornered, remained quiescent. On Monday, Power shares were a bit quieter, but cement group firmed up. On Tuesday, perturbing news from France and the easiness in securities affected shares. Wednesday and Thursday sessions were rather dull. Rates of important scrips are tabulated below:—

	Close on 1st Feb. 1934	Highest	Lowest	Close Today

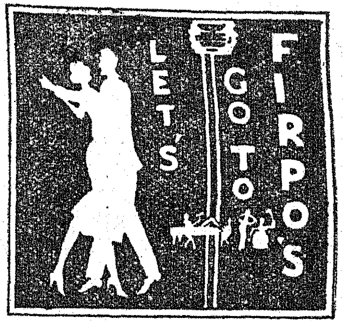
Editorial Comments



PROTECTION AND COTTON INDUSTRY

The Report of the Tariff Board regarding the grant of protection to the cotton textile industry, which was released early this week, has been deprived of much of its immediate significance by its belated publication and the evenfulness of the period since the drawing up of the report. Not to speak of the Indian Tariff (Textile Protection) Amendment Bill, there have been two important agreements, one between India and Japan, and the other between the Indian and United Kingdom textile interests, commonly known as the Mody-Lees Pact. It is strange that the Government should have kept the invaluable findings of the Tariff Board under lock and key when steps of such moment to the industry were being considered and taken, not only by the Government, but unofficial agencies, whose representative character has been more than questioned during these days. As a result of these two agreements, the Government are obliged—and it is futile for the public to protest—to fit in the scheme of protection to be awarded to India's staple industry within the framework already prepared. Apart from the difference in the scales of duties, the consideration of which we must postpone to a later issue, the term of the proposed protection is limited to five years with the additional liability to re-examination after the Mody-Lees Pact or the Indo-Japanese agreement.

And yet the most important finding of the Board is that "protection must be assured for a period of ten years," and that "the industry should now be allowed a period of rest from these harassing enquiries." For let it not be forgotten that the report of Dr. Matthai and his colleagues is strictly speaking the first Tariff enquiry of a full-fledged character. For unlike on previous occasions, when enquiries were directed to "the causes of the depression" in Ahmedabad and Bombay or other particular aspects, this time the Board was asked to determine whether the claim to protection is sound.

The Tariff Board has, therefore, applied all the tests prescribed by the Fiscal Commission, and have found that protection must be awarded. Though as regards one of the essential conditions, namely, capacity to dispense with protection at a reasonable distance of time, the Tariff Board finds itself unable to reassure the public, it effectively disposes of every possible objection on this ground to the grant of protection. In the first place, the Fiscal Commission have definitely stated that an industry of national importance is exempt from the conditions they have insisted on in other cases. As for the national importance of the cotton textile industry, though it might look like arguing the obvious, the Tariff Board has laboriously appraised the dangers to the national economy in the event of the cotton industry coming to grief. Not only will there be an accentuation of unemployment, but the Indian cotton grower would be ruined; and on the authority of the Government of Bombay the civil peace and the financial fabric of the province would be gravely endangered by indifference to the needs of the cotton industry.

Let it not be supposed, however, that the Tariff Board have only put forward scientific and otherwise plausible pleas for the perpetual support of inefficiency. To a careful reader of the Report, it should be clear that in the evolution of the Indian cotton textile industry, the stage has emerged when internal competition can be trusted to protect the interests of the consumer and drive inefficiency from its comfortable shelter behind the tariff wall. We have it on the authority of the Board that there are already a good few Indian mills who even now can afford to dispense with protection. The bogey of perpetual inefficiency of the producer and eternal damnation of the consumer is gone. Though the efficiency of the labour force still leaves much to be desired, it is certain that in the future the Indian mills will not be just a herd of never-do-wells wallowing in inefficiency.

The main findings, as distinct from the specific recommendations, of the Board have to be put and brought together in proper relation if their exact significance is to be appreciated. The cotton industry is one of national importance and as such is not subject to all the tests prescribed by the Fiscal Commission. But it is not true to say that the tests are not satisfied. At the same time it is difficult to say at what time the industry will be able to outgrow the need for protection. This, however, should not be misunderstood, as signifying the necessity of perpetual protection. As already there are mills which can survive free trade, one may reasonably expect internal competition to protect the interests of the consumer. But the shelter of a protective duty would be necessary, if the mills are to progress towards efficiency; and because in the past no substantive protection was granted and the Government were, so to say, frequently digging up the roots to make sure that the plants are growing, such protective measures as had been afforded in the past did not provide the opportunity for reform.

Such is the background on which the main recommendations have been set. The Tariff Board is of the view, which is contrary to that of Mr. G. S. Hardy, that specific duties need not be ruled out on administrative grounds, and that in conjunction with a variable *ad valorem* duty, they could form an effective protection at once for the industry and for the revenues of the Government. The Board has also come to the conclusion—which perhaps explains the inordinate delay in its publication—that the Indian industry stands not less in need of protection against the imports from the United Kingdom.

There is then the question of internal reform. Too often have we heard the insistent cry, to which we have ourselves contributed, that the cotton industry must reorganise itself and that it is high time that a determined effort is made at least to stop the leakages arising from the present system of managing agencies. In this question, the Tariff Board has shown a remarkable freedom from the heat of mainly interested controversy. It recognises the scope that the system offers for abuse, but is content to lay down the main principles of conduct for managing agents and to reinforce the demand for a reform of company law. As for other measures, the Board has afforded a timely corrective to the prevalent ideas about mergers, which it rules out as being beset with insuperable practical difficulties. Perhaps the most significant orientation of our ideas regarding the cotton industry is the finding that internal competition is the only valuable spur to economy and not an avalanche of imports from countries, whose standards have no relevance to our own.

THE LATE MR. A. RANGASWAMI IYENGAR.

Death has of late caused many a serious breach in the ranks of Indian nationalists; but none so difficult to fill as that following the demise of Mr. A. Rangaswami Iyengar. Mr. Iyengar was an embodiment of qualities and attainments which are rarely, if ever, found together, and are, at any rate, acquired only in a life of laborious and unostentatious public service, for which opportunities and qualifications are alike few and far between. Mr. Rangaswami started his journalistic career as Assistant Editor of the Hindu under his uncle, the famous Kasturiranga Iyengar, who earned for Madras the distinction of the only city where the leading journal is an Indian-owned nationalist daily. Though for the best part of his life, Mr. Rangaswami was the Editor of a vernacular paper, he ever remained in the forefront of Indian journalists and politicians. In his earlier years, he played the role of the silent worker, to whom limelight was an embarrassment and a distraction. He formed in himself a regular secretariat for the Congress organisation; and successive Presidents found in him an indispensable and invaluable secretary. When the Congress Party decided to enter the Councils, Mr. Iyengar had his seat in the Assembly for the asking; and there is hardly any in India who does not know the extent to which Pandit Motilal depended on Mr. Rangaswami for discharging his functions as Leader of the Swarajist Opposition. The life in the Assembly brought Mr. Iyengar his first meed of praise and recognition; and the Government members never lost an opportunity, despite his Congress affiliation, to signify their appreciation of his qualities and the value they attached to his co-operation in committee work.

* * *

In the last few years Mr. Rangaswami Iyengar was somewhat out of tune with the Congress; and this was apparent in the editorial columns of the *Hindu*, which, it must be said, was never noted for the too passionate and sentimental type of nationalist propaganda, for which, unfortunately, a craze has of late been created. In fact, the *Associated Press* in its obituary sketch gone to the length of associating Mr. Iyengar with Sir Tej Bahadur Sapru and Mr. Jayakar in a remark which, with better respect for the feelings of the departed; the A. P. I. could have refrained from making. Mr. Rangaswami could never be a supporter of the Sapru-Jayakar policy, though after the collapse of the Civil Disobedience Movement, he laboured hard to bring Congressmen round a more practical programme. If on the one hand, his eyes were opened to the dissipation of national energy in the attempt to continue Civil Disobedience, he was equally aware that his own efforts at co-operation yielded no tangible good. It would be most truthful to say that Mr. Rangaswami died an agnostic in Indian politics.

* * *

To regard Mr. Rangaswami as a politician is to fasten attention on the least important aspect of his career. Government and Congress alike knew him as one with the mentality of a conscientious civil servant, who would never overlook relevant facts or spare himself any trouble in gathering or appraising them. Mr. Rangaswami was neither a moderate nor an extremist, as we understand these terms. He was essentially, and from first to last, a student, and in politics, he followed wherever his studies led him. Author of one of the earliest treatises on the Indian Constitution, he treated constitutional law as one of his special subjects; but later public finance absorbed all his attention; and in matters like Federal Finance and Capitation Charges, there are few in India to compare with Mr. Rangaswami in detailed knowledge, practical insight and capacity to suggest tentative solutions acceptable to all parties. His loss will be felt more and more keenly, as we recover from the White Paper fiasco and take up again the broken threads of co-operation between Government and the nationalist.

* * *

For the present, one necessarily thinks of the man and the institution with which he was connected by innumerable ties. Kindly to one and all, generous to the needy, unostentatious to a fault, but unconsciously impressive with the weight of true dignity, Mr. Rangaswami was sure of his place in the heart of everyone he came in touch with; and there are thousands in all parts of India and England to bemoan his death as the loss of a sincere friend, more than colleague, comrade or chief. The *Hindu* has lost one who had been fashioned through a lifetime to be its most fitting head; but great men leave their traditions behind and thus lessen the extent of our loss.

WORLD TRADE IN 1933

More interest, we affirm, attaches to our *Commercial Supplement* issued early in the week than that of a mere retrospect or narrative account of the old year. For we believe that an assemblage of the experiences of the world during 1933 is necessary at this stage of Indian and world economy to make any reasonable programme for the coming year. For never has the average businessman been faced with greater perplexities in the daily conduct of his business than to-day, when he is confronted with tremendous uncertainties in the exchanges, insuperable difficulties of gauging the trends of world trade and the possibility that state policy in matters economic both in one's own country and abroad might at any time take surprising and baffling turns. Above all, there is the immediate task of estimating the strength of the forces of recovery, which have been clearly felt in almost all parts of the world. To under-estimate the strength of such forces would mean, for the businessman, a lamentable missing the buss. And equally an overestimate involves the danger of taking steps fraught with grave consequences. The necessity of an accurate understanding of the position of world trade and economy is greatest in the case of governments. It would be as unwise for a government to lull itself into a false security trusting to the forces of automatic recovery to pull it out of the slough, as to assume a little too rashly that persistence in hundred per cent. economic nationalism is the only way of improving the material well-being of the people. For India, particularly, with the dependence at present of her agricultural staples on foreign markets, an appreciation of the exact extent to which there has been a recovery in world trade as such, is important not only from the point of view of economic policy in the future, but also of the immediate task of framing the budget.

* * *

In our *Commercial Supplement* we have endeavoured to define the place of the year 1933 in the present state of the world's political and economic evolution and particularly the trade depression which started in September, 1929. Though we are only too conscious of the scope that we have left here and there for improvement, we believe that no one who goes through the general retrospective accounts of 1933 in the first four sections of the *Supplement* will fail to get an adequate lead and stimulus in appraising the events of 1933 and extracting therefrom some clue to the possible developments of the year ahead. The principal question that is necessary to tackle now is how far the recovery of which we have some evidence will take us on the path that lies ahead and whether it has behind it a momentum at all comparable to that which sent us into the depths of the depression.

* * *
